BUY YOUR MAC FROM APPLE
BUY YOUR PRINTER DIRECT FROM GCC.

GCC TECHNOLOGIES

HERE'S WHY...

We're GCC Technologies, and our printers are sold direct against some of the most famous names in the computer industry. This creates a buying opportunity for those who understand a basic principle of free enterprise: Selling direct is better for the manufacturer and buying direct is better for the customer.

Therefore, we sell our printers direct, eliminating many prosperous middlemen, and lowering your costs.

We also provide direct technical support, eliminating other middlemen who can't solve your problems. And we are compassionate hand-holders. We offer unlimited free technical support, not just on business days, but on Saturdays too – throughout the one-year warranty period. If during that period you have a problem that our technical support people can't solve, our Platinum Exchange program guarantees you a replacement printer by the next business day.

We invite you to buy your next printer direct from GCC and join our growing family of satisfied customers. All GCC printers come with an unconditional thirty-day money-back guarantee.

For complete details, call the 800 number below. And, for the record, yes, our printers have wonderful technology too. It's just that you don't have to pay extra for it.

ELITE 12 Series

12 pages per minute
Maximum Print Area: 8.5" x 14"
Letter/A4, legal, envelope

WYSIWYG* Video From Any Source.

From Video Source...

...to QuickTime Movie.

*What You See Is What You Get.

Introducing InterView®, interactive imaging for USB Macs. Makes video for your Macintosh as easy as 1-2-3. This one simple device transforms any USB enabled Mac or Power Mac G3 into a true media machine. InterView accepts video from almost any source, from a camcorder, a digital camera, a VCR, to a full-blown S-Video Satellite system.

InterView® ships with the full version of Strata's VideoShop, for powerful yet intuitive video editing.

The newest version of Strata™ VideoShop ensures that you'll have the tools you need to build your InterView captured video into high quality storyboards, web movies, or just about any form of visual, full motion communications. You can even create QuickTime movies that you can email to Grandma or post on a webpage!

For more information on the new InterView, or the MACh Speed Performance Package, visit www.xlr8.com, or call 888-XLR8TOR today! Available from distributors and resellers worldwide.

Project Scheduling Made Easy!

DON'T TELL MY BOSS

I'm not a project management expert, but everyone thinks I am. Most of my time is spent completing tasks, so I need a scheduling tool that's easy, fast, and flexible.

FastTrack Schedule 6.01 fills the bill. It keeps me organized and in control displaying all my project details in rich, colorful timelines. FastTrack Schedule provides just the right amount of power because it's more sophisticated than day-planners, but *easier to use and half the price of traditional, high-end project managers.*

$199*

NEW Version 6.01
- ExpressDate™ • FastSteps™
- Open/Export MS Project MPX files
- Full AppleScript Suport
- Histograms • Hyperlinks
- and much more...

The presentation-quality schedules clearly illustrate project objectives and deadlines keeping team members and clients informed and up-to-date. In a single schedule, I can outline multiple projects, make assignments, track cash flows, set-up dependencies—even add graphics. Whether I use it once a week or every day, FastTrack Schedule makes project scheduling easy.

For the free Demo CD, more info, or to place an order call 800-450-1982.

If Your On-Screen Color Isn't What It's Cracked Up To Be, You Need SpectraView From Mitsubishi.

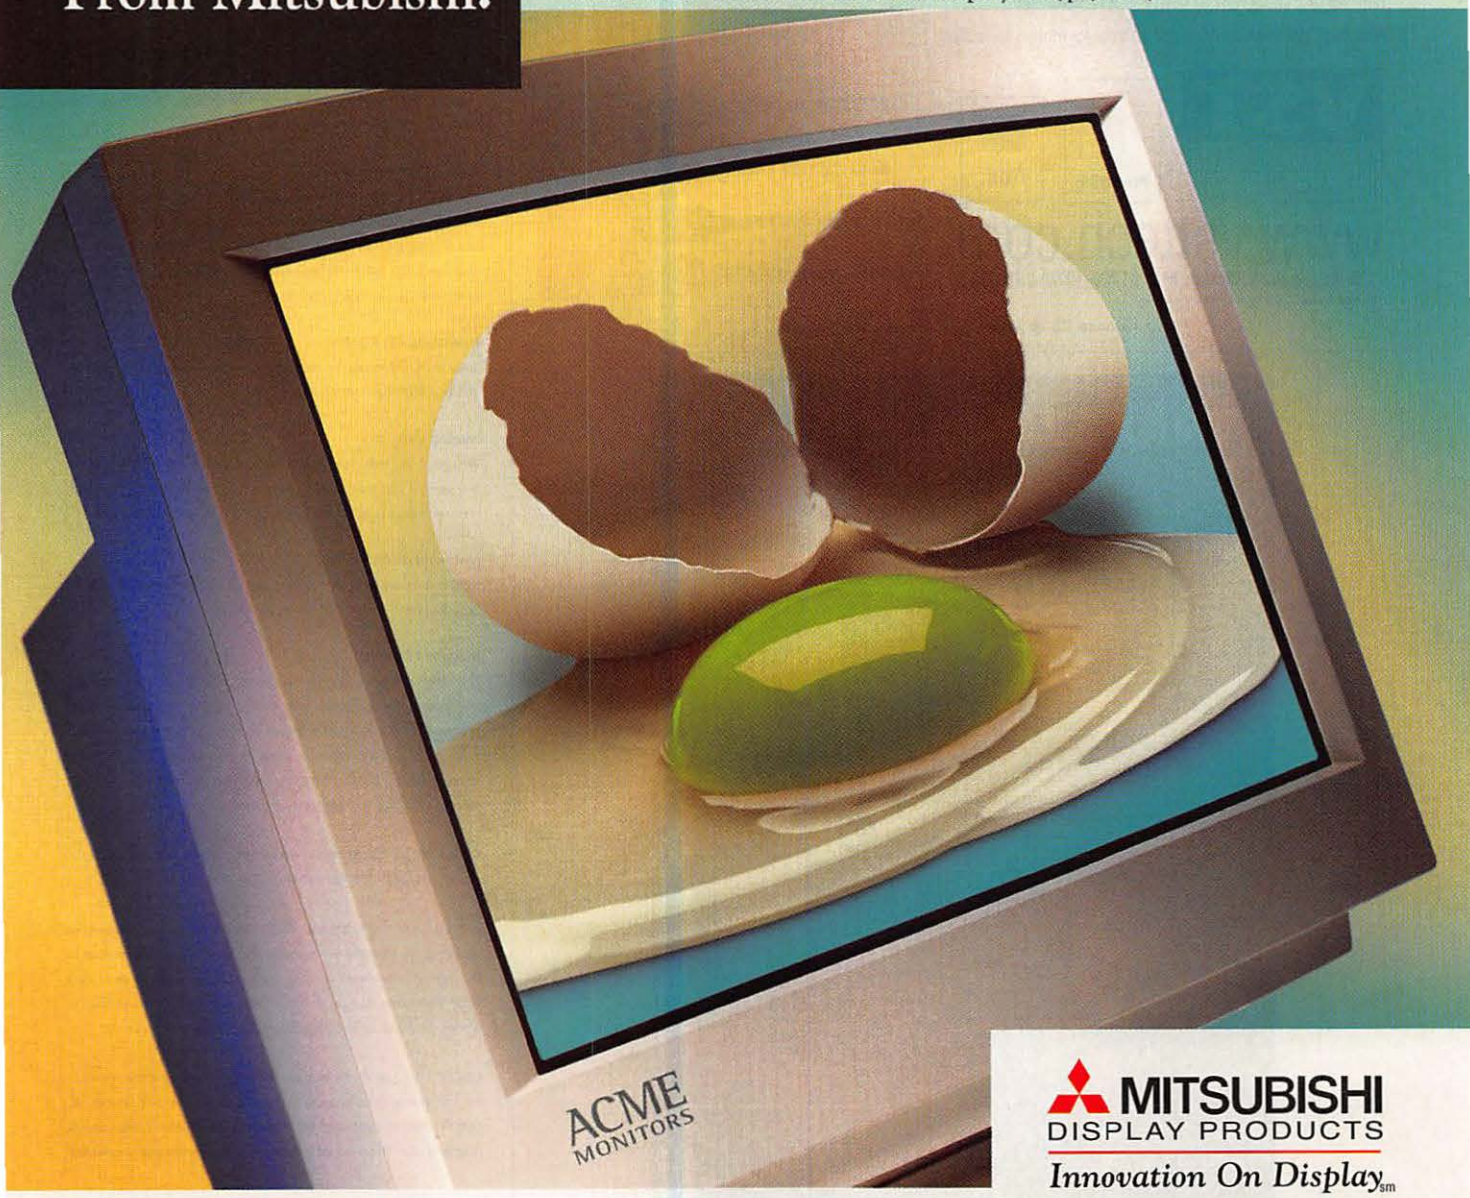

Unsurpassed Color Accuracy For A Wide Range Of Applications.

If you're fanatical about color accuracy, Mitsubishi has just what you need. SpectraView is a color calibrated display system providing the ultimate solution for a wide range of color-critical applications such as pre-press, video editing, web design, medical imaging and CAD. And, with SpectraView you can color conference by sending files electronically between remote locations for maximum efficiency and convenience. Featuring award-winning 21-inch or 17-inch DIAMONDTRON™ CRTs (19.7-inch and 16.0-inch DVI*, respectively), SpectraView achieves precise color calibration by actual on-screen color measurements using a high-speed SpectraSensor™ colorimeter and custom software. Color adjustments are made in the monitor electronics, giving you the maximum number of colors available. Plus, cross platform color matching capability ensures monitors can be matched identically on Macs and PCs. For true color matching, the solution is as easy as cracking an egg – SpectraView from Mitsubishi Electronics. Contact Mitsubishi today for complete information.

Introducing the amazing VST FireWire® Hard Drive

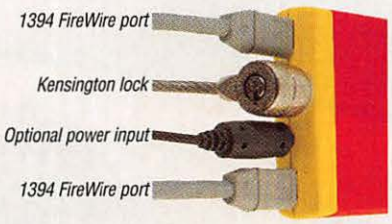

Simply amazing. They're designed for those who want the most convenient, lightweight, small and durable hard drives on the market. In fact, the drives are so small they fit easily into a purse, briefcase, or even your pocket. And with data transfer rates up to 400 Mbps and the ability to hot-plug, these drives have it all -- speed, performance, portability and good looks. Just plug one into any FireWire enabled PC or Power Macintosh® G3 and you are ready to work or play. Currently available in 2GB, 4GB and 6GB capacities, these hard drives can easily be linked together in a chain with no device ID's or termination. Amazing? We think so. Visit our website for more information.

iomega.

19:42 You learn the hard way in the outer sectors... Like never get into a drinking match with a three-headed Bukan. Never assume a Strogg is dead even when he's nothing but bloody scraps of shrapnel. And never go to bed with a Rabaul no matter how many breasts she has.

19:11

THE LINE BETWEEN MAN AND MACHINE SHOULD NEVER HAVE BEEN ERASED.

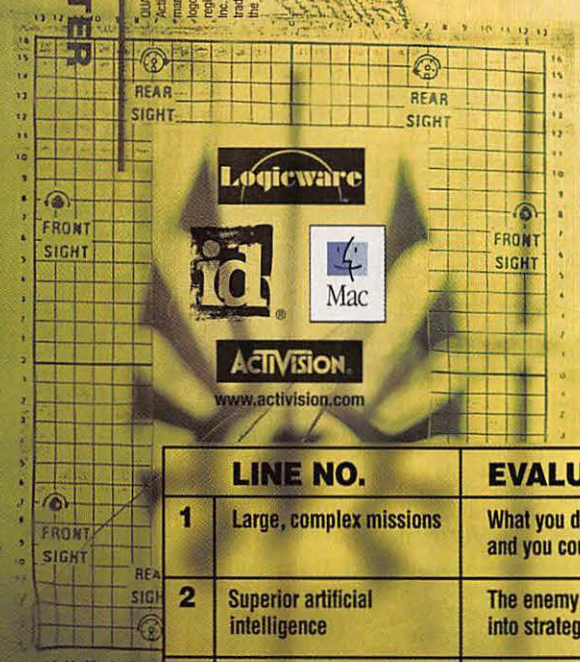

Blood vessels and wires should never have been crossed. Souls and circuitry, brain stems and processors.

ACTIVISION
www.activision.com

	LINE NO.	EVALUATION
1	Large, complex missions	What you do in one level could affect another. One false move and you could alert security, flood a passageway, or worse.
2	Superior artificial intelligence	The enemy is far from stupid. They will evade attacks, maneuver into strategic attack locations, and hunt your ass down.
3	Intense environments	Man gun turrets. Blow up subways. Smash glass. Toss grenades with perfect control. Duck to evade hits. Give them Hell.

18:03 Grotesque images of Strogg have been filling my sleep at night. Their metallic spines jutting awkwardly through muscle, skin and connective tissue, masks of human facial skin smeared and bonded to their cyber-alloy heads, crude but powerful weapons jammed into oozing, gaping sockets. Thank God the endless sleep ahead is dreamless.

17:05 It's either us or them this time. We lose, and we all end up beetburst in the grill of some unholy mechanized carnivore. We win, and the human Coalition of Nations can start rebuilding the cities on Mars, Olympus, even Earth. Who knows - they might even get the old interplanetary football league going again. God, I miss Monday Night Football.

"...there's simply nothing on this planet that can touch Quake II."
— PC Gamer

QUAKE II™

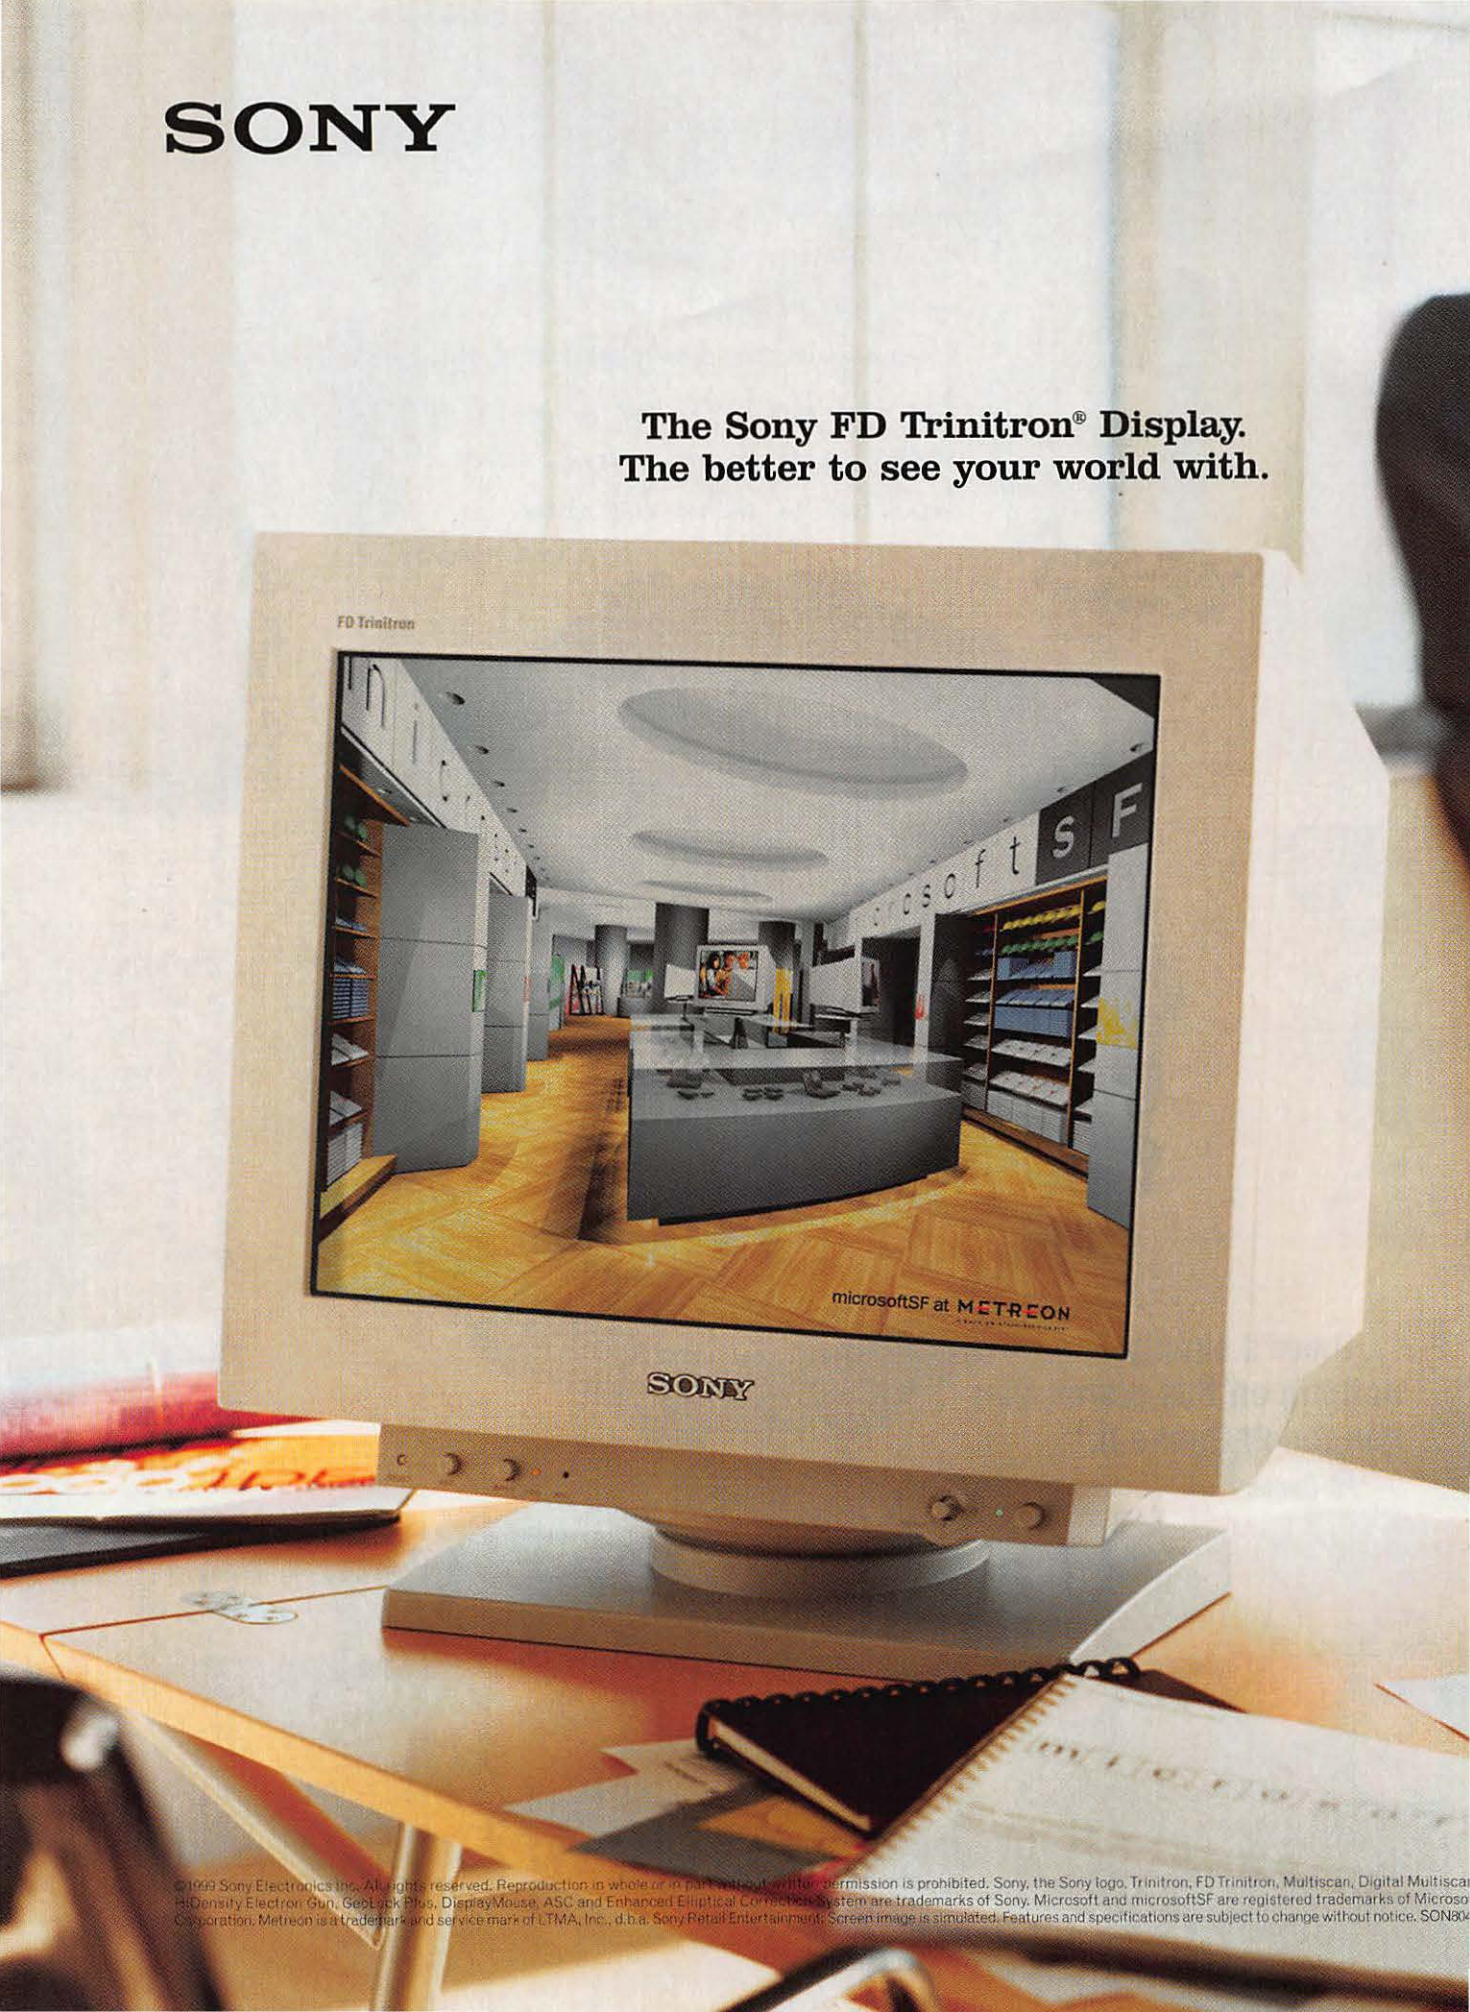

SONY

The Sony FD Trinitron® Display.
The better to see your world with.

©1999 Sony Electronics Inc. All rights reserved. Reproduction in whole or in part without written permission is prohibited. Sony, the Sony logo, Trinitron, FD Trinitron, Multiscan, Digital Multiscan, HiDensity Electron Gun, GeoLock Plus, DisplayMouse, ASC and Enhanced Elliptical Correction System are trademarks of Sony. Microsoft and microsoftSF are registered trademarks of Microsoft Corporation. Metreon is a trademark and service mark of LTMA, Inc., d.b.a. Sony Retail Entertainment. Screen image is simulated. Features and specifications are subject to change without notice. SON804

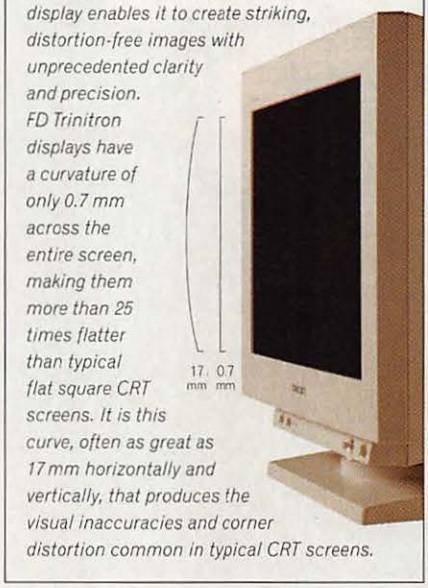

Michael Lapkin of Microsoft has selected the FD Trinitron display for its first technology showcase, microsoft® SF.

When microsoftSF opens its doors this year, it will showcase its graphic professional software on the stunning new FD Trinitron displays from Sony. Located at Metreon in San Francisco, microsoftSF was created to provide a unique environment in which to interact with Microsoft's cutting-edge products. To present their graphics software in a dramatic and impactful manner, microsoftSF chose Sony's flattest, most accurate CRT screens ever, the new FD Trinitron displays.

The virtually flat FD Trinitron display series is the most revolutionary advancement in image technology since the invention of Trinitron technology in 1968.

Web designers will enjoy the superior resolution. CAD professionals will appreciate the precision of the tight aperture grille pitch. And graphic designers will be dazzled by the truer, brighter colors. So whether it's the 19" or 21" model (18" and 19.8" VIS), the FD Trinitron display makes an immeasurable impression.

The virtually flat surface of the FD Trinitron display enables it to create striking, distortion-free images with unprecedented clarity and precision. FD Trinitron displays have a curvature of only 0.7 mm across the entire screen, making them more than 25 times flatter than typical flat square CRT screens. It is this curve, often as great as 17 mm horizontally and vertically, that produces the visual inaccuracies and corner distortion common in typical CRT screens.

www.sony.com/F-Series

VIRTUALLY FLAT FD TRINITRON CRT for minimized distortion and reflective glare.

TIGHTEST APERTURE GRILLE pitch available (0.22mm across the screen) for unprecedented sharp and clear images.

DIGITAL MULTISCAN® TECHNOLOGY for broadest horizontal scan range and highest resolutions: 30-121kHz for resolutions up to 1800x1440 @ 80Hz (F500); 30-107 kHz for resolutions up to 1600x1200 @ 85Hz (F400).

SMART CABLE DESIGN for shorter display depth on desktop.

UNIQUE DISPLAYMOUSE™ control for quick, smooth adjustments of digital controls through comprehensive OSD.

HIDENSITY™ ELECTRON GUN with Enhanced Elliptical Correction System™ technology for consistent, accurate focus throughout the screen – even in the corners.

GEOLOCK PLUS™ CIRCUITRY for improved color and brightness uniformity.

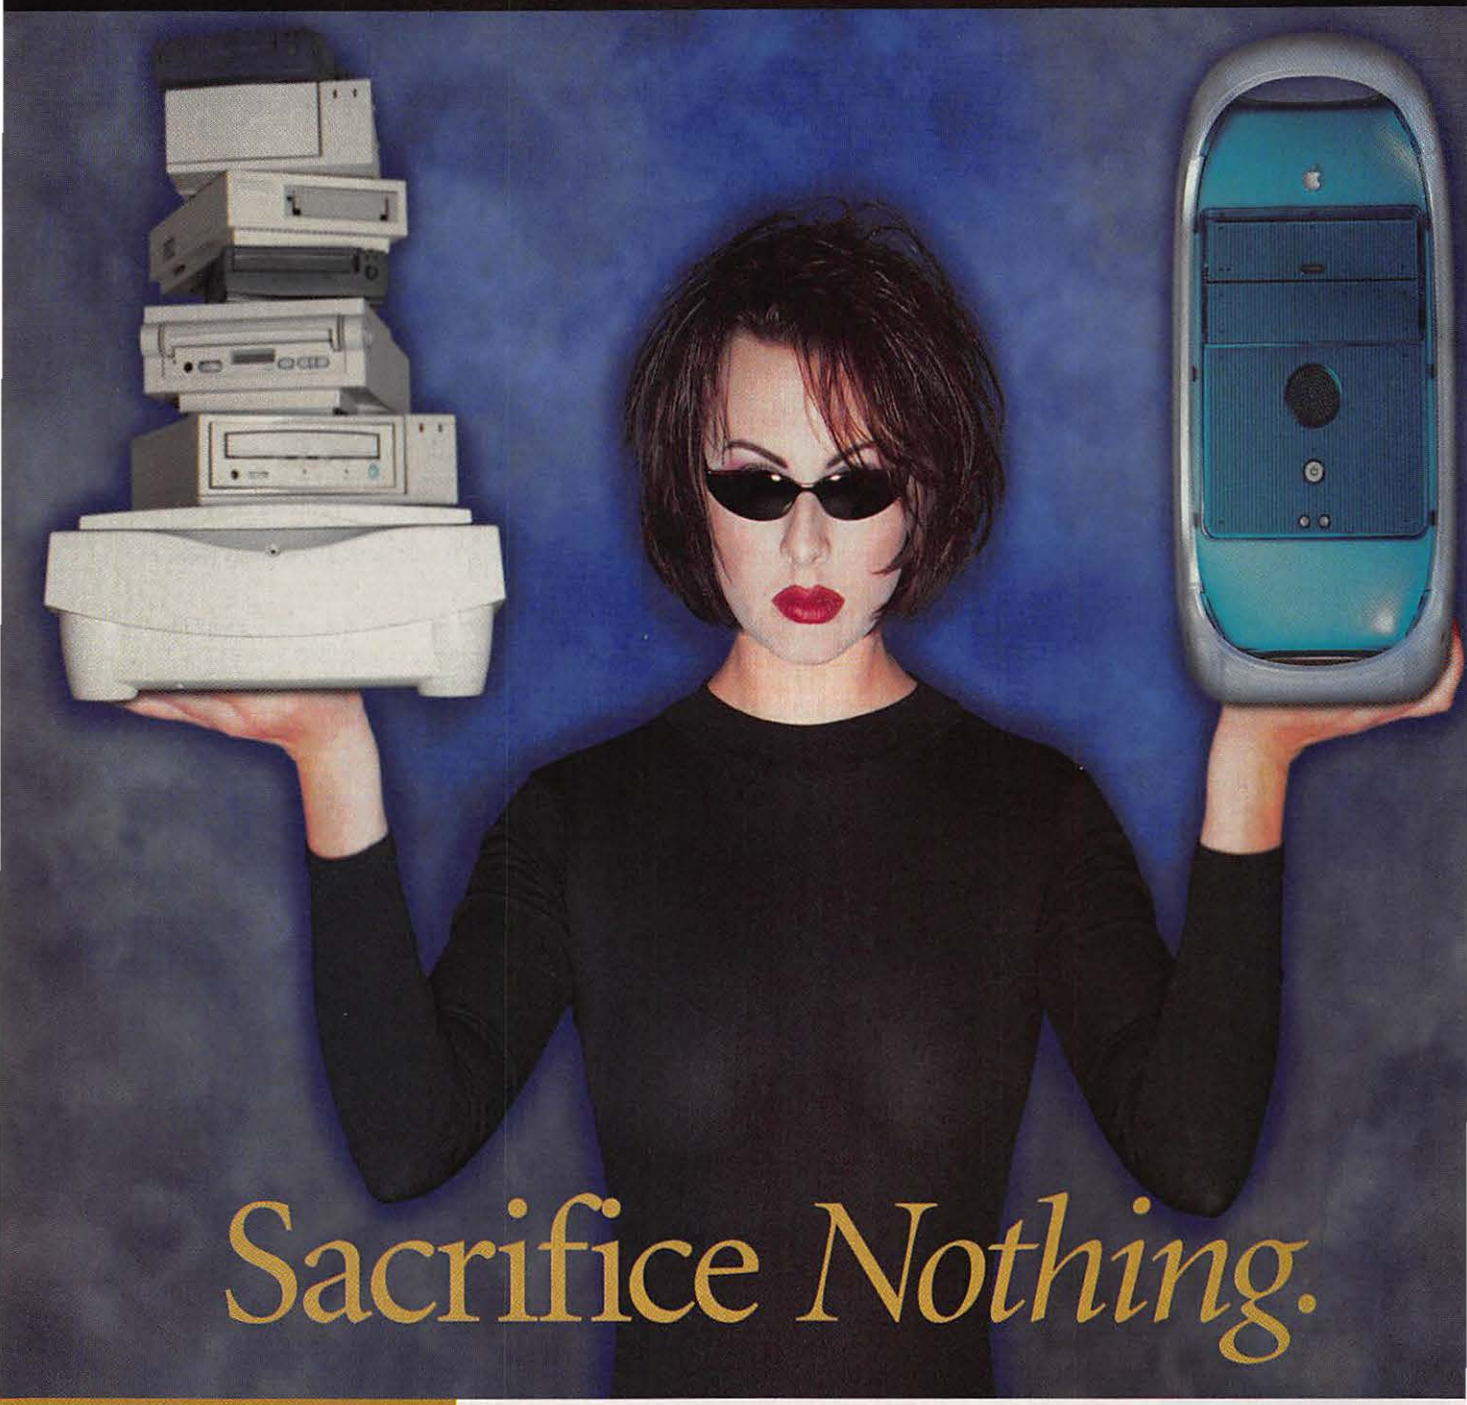

ACTIVE SIGNAL CORRECTION (ASC™) technology for one-touch instant image sizing and centering.

DUAL INPUT CONNECTIVITY provides 15 pin mini D-sub and 5 BNC connectors for simultaneous connection to two computers.

USB HUB connectivity ports (1 upstream, 4 downstream) for easy connection to USB peripherals.

FD Trinitron

We move the information that moves your world.™ adaptec®

Sacrifice *Nothing.*

Go ahead, upgrade to that new G3 without sacrificing the SCSI peripherals you depend on. And in case you didn't know, Adaptec® SCSI cards support Apple's old SCSI Manager and newer SCSI Manager 4.3 devices so you can connect to whatever SCSI peripheral you might be using. But it gets even better. Adaptec SCSI significantly outperforms Apple's previous built-in SCSI, enabling your Jaz, scanner, and other peripherals to operate at peak performance. So if you want to upgrade to a new blue G3 without sacrificing anything, get an Adaptec SCSI card. For more information visit **www.adaptec.com/mac.**

Letters

InCompetentUSA

DAVID POGUE'S MARCH 1999 *Desktop Critic* column, "CompUSA: Apple's Not-So-Superstore," was right on target.

I was recruited from our local Macintosh user group as an official Apple representative for the iMac introduction and the OS 8.5 rollout at a CompUSA in Colorado. When I arrived at the store, I introduced myself to the manager. He said that he didn't care about Macs, didn't know anything about Macs, and as far as he was concerned I was wasting his time.

Several Mac customers indicated that the Apple Store-Within-a-Store at this CompUSA was usually used for storage of overflow PC merchandise, and they were left to find what they needed on their own.

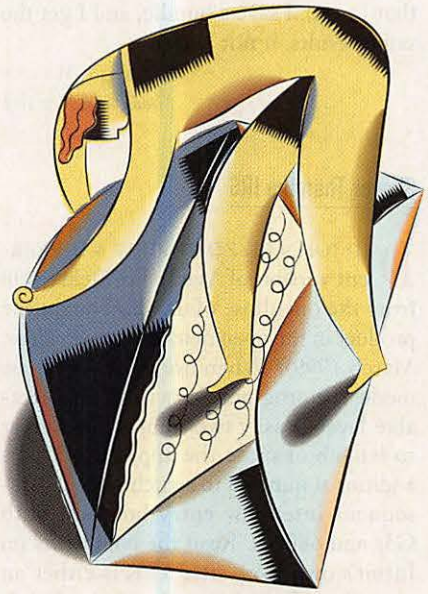

For a program of this type to be successful, there must be a positive attitude on the part of store management. Hype at the corporate level means nothing if the store managers have a negative attitude and short-circuit corporate policy with their condescension.

WILLIAM C. ROEMER
Fort Collins, Colorado

MY EXPERIENCES WITH COMPUSA have been almost identical to David Pogue's. At the store in San Marcos, California, I asked several questions about the iMac and received less-than-stellar answers. Finally, I started asking the young salesperson questions that he could have answered if he had just turned around and read the advertisement behind him. He failed miserably. I tried again at the new store in Encinitas and received the same results. Whatever Apple is paying this company to sell its products is too much by a factor of ten.

EDWARD L. LANE
Oceanside, California

JEFF NEUMANN

AT LEAST MR. POGUE WAS ABLE TO talk with a salesperson. When I went to buy Apple's LaserWriter 8500, I couldn't get anyone to wait on me. CompUSA's treatment of Mac customers is abhorrent. As an Apple Computer shareholder, I find this situation intolerable.

KEITH A. RUST
Saint Paris, Ohio

Blues for the G3

THE NEW G3 IS CUTE, ISN'T IT ("iMac Envy," March 1999)? And those handles—if it only had a set of wheels on one end, we could tote it around like luggage! Is there some future integration yet to be announced for these impressive yet mysterious design additions? Do they imply that I need to carry this machine often? Do I need to lift it every day? Maybe it's an attempt to start some new exercise trend—Macxersize!

The new G3 case is a bad design. My desktop is packed with hardware. I can't spread out anymore, so I rely on stacking components to save space. I put peripherals on top of my PowerPC Mac, which allows me to use short SCSI cables. I wish these designers would look more closely at the environmental needs of Mac users and design hardware that doesn't incorporate useless obtrusive elements. Work with a Mac every day for a living, and then tell me you still have enough room on your desk to accommodate retrograde ergonomic design—like handles.

TROY KILGORE
Bloomington, Indiana

IT SEEMS APPLE HAS GONE AND done it again: they took two steps forward and three steps back.

When it came time to look seriously at purchasing a machine for digital-audio applications, I decided that the Mac was for me. A salesperson recommended two options: look for a used 9500 or 9600 or wait and see what the new G3s come with. The new G3s appear to have so much going for them (improved bus speed, FireWire and USB ports, ATI Rage 128-bit graphics, great price point) that stepping up to one seems like an easy decision.

Easy, that is, until you start to dig deeper, and discover that Apple decided to drop many of the features that made the original G3s attractive in the first place: the new G3s have no serial ports, no built-in video, no floppy-disk drive, a lack of expansion slots, and no SCSI!

Every time Apple gets a good thing going, they get clumsy. And they certainly did it again this time. A great new machine, hobbled by a lack of expansion and the connections people use every day.

WILLIAM T.B. LATANVILLE
Toronto, Ontario, Canada

Complete Canvas

BEN LONG MISSED THE TWO MOST important features of Deneba Canvas 6 in his recent review (*Reviews*, March 1999). First, with Canvas I can create high-end output in one program—instead of using Adobe Photoshop, PageMaker, and Illustrator—and without all the hassle. Second, I have been released from the "Adobe extortion program"—each year I fork out about $169 to $189 for upgrades to each program! Canvas gives me the output that I need, I save a bundle, and I get the same results, if not better.

D CHRIS HALEY
Middleville, New York

Slower Than the IRS

DID JOHN RIZZO REVIEW A DIFFERent version of MacInTax Deluxe '98 from the one those of us who bought the product in the open market have (*Reviews*, March 1999)? When using the Interview mode, the program slows to an unacceptable level—easily two minutes or longer to launch or close the application, plus additional minutes to switch to each subsequent interview entry box—on both G3s and 68040s. Read the comments on Intuit's own Web site. This is either an example of Intuit's complete lack of quality assurance or their utter disdain for the Mac market.

RICHARD GLANTZ
Lexington, Massachusetts

Infectious Virex

IN HIS REVIEW OF VIRUS-PROTECtion software, Stephan Somogyi mentioned that Norton AntiVirus has a straightforward interface (*Reviews*, March 1999). I disagree. I tried a demo version of Symantec AntiVirus (now NAV), and I feel that Virex is a much better choice. NAV did the job, but it was very intrusive, and I did not like the interface as much as Virex's. Virex's interface is not perfect, but it's easy to use and understand.

I used Virex 5.8.1 for several months, and it did a great job. After two months or so of my using version 5.8.1, Virex revved to version 5.9. I contacted Network Associates and they sent it to me free!

Somogyi complained that Virex did not offer an automatic upgrade feature, but he also noted that this feature for NAV is flawed. Anyone who knows how to use a Web browser can get the free upgrades for Virex via the Web. It sounds like Somogyi's a NAV fan. I bet he also prefers PCs.

ARTIE EVANS
Riva, Maryland

Go beyond the Root

STEPHAN SOMOGYI'S REVIEW OF the OrangePC 627 overlooks a major software limitation (*Reviews*, March 1999). You can share a folder from your Mac so that it appears on the PC as a network volume (allowing you to work on the file on both platforms), but you are limited to the outdated DOS "8.3" file-name convention. Worse, you can use only files located in the root directory of the shared volume! I tried many fixes, including adding a second Ethernet card and mounting a trial version of Dave.

Fortunately, a workaround exists. The PC will recognize all files and subdirectories on a floppy or an external SCSI device, such as a Zip drive—even files with long names. The only apparent limitation is that sometimes you have to eject and reinsert the disk when switching OSs so that the new OS can recognize changes made to files. Since discovering this, I've been quite pleased with my Orange. Of course, it's still no Mac, but that's comparing Apples and Oranges.

SCOTT OWENS
Gaithersburg, Maryland

Orange Micro says it is aware of the file-name and shared-volumes problems. It is planning a 32-bit version of the shared-volumes software, which should fix the problem. In the meantime, Scott's workaround will do the trick.—Ed.

Microsoft Makes Good

MICROSOFT INTERNET EXPLORER (IE) 4.5 is amazing ("Internet Explorer Gets Back to Basics," *News*, March 1999). Fast, compact, and reliable, it's such a huge leap over what browsers used to be just a year ago, and a fine piece of software to boot. IE plain cooks on my old Power Mac 7600/132 here at home; at work we

Sleek, voracious, efficient, smart– and able to kick anybody's butt in the pond.

(No, we're talking about the Intuos graphics tablet system.)

Introducing Intuos. The world's first intelligent graphics tablet system. To create it, we questioned everything, reviewed every datapoint, rethought every purpose and every detail. We started by analyzing professionals who use graphic tablets for hours and days at a time.

We wanted to give you every ergonomic advantage, to make every aspect of Intuos effortless, natural and direct. Then we built a totally redesigned pen–one with 1024 pressure levels, more sensitivity and more capability than ever before.

And we added an integrated set of precise and expressive instruments, including a cordless mouse that can move in four dimensions, a revolutionary new airbrush and more.

The result– the most advanced tablet available. It's light years beyond other tablets while still delivering the superb quality that has made Wacom the universal choice for professionals worldwide.

The Intuos intelligent graphics tablet system. From Wacom. Who else could give you all this?

run IE 4 on Windows NT and it is terrible, an utterly lifeless piece of software. What's going on? Face the facts. Microsoft the Great is starting to consider the Mac more seriously. Office? Better on the Mac. IE? Better on the Mac. Now all we need is Flight Simulator 5.

JEFF BAYNARD
Baltimore, Maryland

How about Banana?

AFTER READING THE ARTICLE "Flavorful iMacs Debut" (*News*, March 1999), I realized where Apple got the five new iMac flavors. If you look at the classic Apple logo, starting at the bottom of the apple the stripes are blue, purple, red, orange, yellow, and green. These correspond to the flavors blueberry, grape, strawberry, tangerine, and skipping yellow, lime. The only flavor I can think of for yellow is lemon, and there is no way that Apple is going to call their product a "lemon"!

TOM JELMELAND
Seal Beach, California

If you're craving a splash of yellow with your iMac, check out Contour Design's (800/462-6678, www.contourdesign.com) banana UniMouse.—Ed.

You can print an entire help topic directly in OS 8.5 by opening the File menu and choosing Print ("On the Trail of Mac OS 8.5," March 1999). To copy or print only a selection from the help text, use David Pogue's trick.

Deneba Canvas 6 can apply image adjustments simultaneously on multiple bitmapped objects (Reviews, *March 1999*).

In March 1999's Quick Tips, *the correct name for Joseph C. Lee Company's premade iMac restart gadget is the iMacButton.* m

Conquer Disk Damage

Introducing DiskWarrior™, a revolutionary new way to restore damaged disks!

DiskWarrior is a revolutionary new utility that combats disk damage. It quickly rebuilds, recovers and optimizes your HFS and HFS Plus disk directories, eliminating all directory errors and recovering lost files. Other utilities attempt to repair disks by patching the damage. Patching can result in more damage and permanent loss of files.

100% Recovery Assurance

Only DiskWarrior builds a new optimized directory using data recovered from the damaged directory. You have 100% assurance that DiskWarrior will always restore your disks and recover your files when directory damage is your enemy.* You'll also have 100% confidence that you're getting the desired results. DiskWarrior's exclusive Preview ability lets you preview the restoration. You can examine your damaged disk in the Finder as it will appear after the directory is restored but before any changes are made to your disk.

Routine Maintenance

DiskWarrior is your first line of defense against unseen disk damage. Running DiskWarrior regularly prevents small unseen problems from becoming large ones by keeping your directories error free. You'll also keep your directories optimized to speed up overall disk performance.

Carlos Cohen, C. Cohen Designs Inc., Toronto, Canada; Rendered with RenderWorks

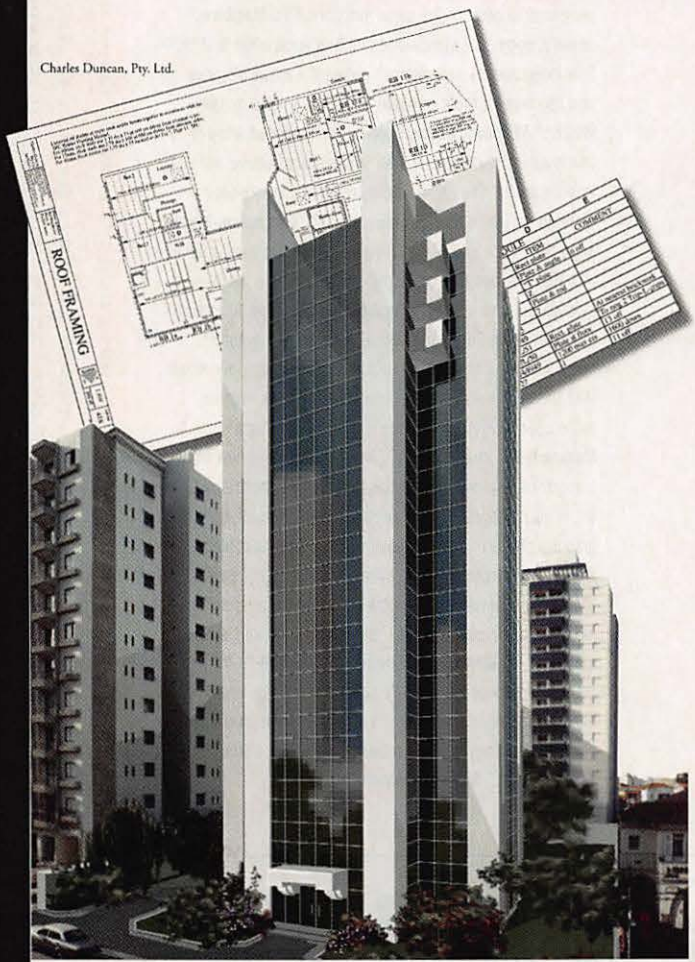

After 14 years of constant research and development, Diehl Graphsoft is proud to introduce VectorWorks—the next generation of MiniCAD. VectorWorks improves MiniCAD's proven CAD technology and merges new state of the art Object-Based design philosophy. This integration makes you more productive without sacrificing flexibility and control.

Introducing

VectorWorks

The Next Generation of MiniCAD

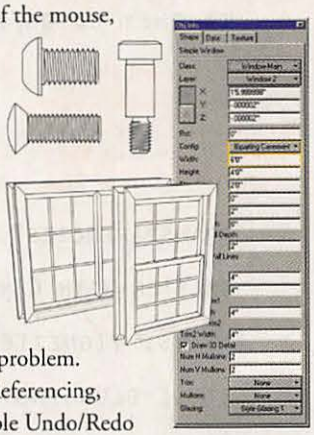

Charles Duncan, Pty. Ltd.

Roberto Candusso, Arquitetos Associados, Sao Paulo, Brazil

Increased Productivity with Object-Based Design

VectorWorks' state of the art Object Technology helps streamline the design process by making it easy to create common design elements. Now, Objects like doors, windows, nuts and bolts, can be created and edited with a click of the mouse, making it easy to explore design alternatives, consider "what if" scenarios, and handle last-minute client changes.

The Strength of a Proven CAD Technology

VectorWorks offers a solid foundation based on proven CAD technology—giving you the power and flexibility to tackle any design problem. New features such as Workgroup Referencing, DWG (v.14), Round Walls, Multiple Undo/Redo and an improved scripting language, strengthen VectorWorks' core CAD capabilities. And, with RenderWorks, VectorWorks' new photo-realistic rendering plug-in, you can bring your designs to life with textures, shadows and dramatic lighting.

The VectorWorks Advantage

With VectorWorks, you get it all—the flexibility and control of proven CAD technology and the productivity benefits of Object-Based design. VectorWorks ships FREE solutions for Architecture, Landscape Design, DTM and HVAC among others. Best of all, you aren't limited to the solutions we provide. VectorWorks is completely customizable, allowing you to create your own custom business solutions.

Special Offer to Readers of Macworld

Save $279 by purchasing VectorWorks with photorealistic rendering direct for $820 or, without rendering for only $595. Includes **FREE** Tech Support and a 90-Day Money-Back Guarantee.

The Vision Thing

by Andrew Gore

Where's Sherlock?

THE MYSTERY BEHIND A GREAT INTERNET TECHNOLOGY'S STRANGE DISAPPEARANCE

IT IS A MYSTERY WORTHY of the great detective himself. His namesake, Apple's Sherlock, is quite possibly the most easy-to-use search technology available on any platform. Want to find something on the Internet? Type in a simple phrase describing your query and Sherlock will track it down.

Sure, lots of search-engine Web sites can find stuff for you. Some even have simple interfaces, although these are few and far between. What makes Sherlock so special is its ability to use *all* these sites to find what you're looking for. Sherlock is a single interface that encompasses all the varied and diverse search and archival resources on the Web.

But despite its obvious power, simplicity, and uniqueness, Sherlock itself seems to have vanished. No, not from the Mac OS—you still get the search facility in every copy of OS 8.5. I'm talking about Sherlock's apparent removal from Apple's marketing and development plans. Little has been heard from Apple or developers about the technology, with the notable exception of Microsoft, which added a Sherlock button to Internet Explorer 4.5 last January.

Elementary, My Dear Apple

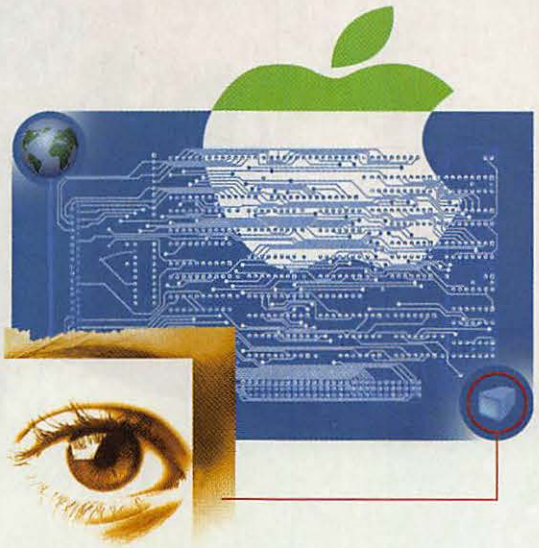

Crime most foul, you say? Let us follow the principles of deductive reasoning used to such great effect by Sir Arthur Conan Doyle's famous sleuth and see if we can ferret out a motive.

Could Apple be unaware of the importance of Sherlock? Unlikely. When OS 8.5 first shipped, Sherlock was the *key* feature the company used to push sales of the upgrade.

So, what could have changed? Could Sherlock have lost its luster in Apple's eyes? Again, unlikely. The company is actually making money off Sherlock every time someone uses it to find something on Amazon.com and then buys that something. Certainly, the potential profit can't be lost on Apple.

Perhaps developers are balking. The most likely developer to have a problem with Sherlock would be Microsoft, which built its own search system into Internet Explorer. Yet Microsoft is one of the very few application developers to support Sherlock directly.

Once you've eliminated the obvious, whatever remains—no matter how unlikely—must be true. It seems, then, the reason for Sherlock's disappearance must be simple neglect. Apple has had so many bigger fish to fry of late that the company hasn't had time to give this impressive technology the benefit of its attention. Which is unfortunate, because with proper support, Sherlock could be to the Internet what QuickTime is to digital video—a critical, platform-agnostic enabling technology.

JOHN RITTER

The Game's Afoot

Allow me now to discard the deerstalker cap, because the time for deducing cause and effect is over. There are three things Apple can do to capitalize on Sherlock, taking it from an interesting sideshow to the juggernaut it deserves to be.

First, Apple must start marketing Sherlock again—not just as part of OS 8.5 but as part of the Mac itself. We've all seen how Apple emphasizes the iMac's simplicity in its commercials; why not tout the simplicity of finding your way around the Internet using Sherlock? I can picture it now: "Step one, launch Sherlock. Step two, tell Sherlock what you're looking for. Step three . . . there's no step three!"

Second, Apple needs to expand Sherlock's bag of tricks with more plug-ins that access more search engines, FTP sites, publication archives, and the like. There should be hundreds of Sherlock plug-ins, not dozens. And before I get letters about how nutty it'll drive you to select from hundreds of plug-ins, I'll add that Apple needs to make Sherlock smarter, so it can select plug-ins by parsing your query.

And while we're at making Sherlock smarter, I'd like to see the intelligence Sherlock uses on searching your Mac's hard-drive contents expanded to encompass the Internet as well. No mean feat, I know. But right now Sherlock is only as good as the search engines it connects to—and we all know how bad some of those are.

Third, Apple must make Sherlock work on Windows. Only when Sherlock is cross-platform can it be truly dominant. And in case Apple is worried about losing money by offering Sherlock to Windows users, the company should remember the money it can make from referrals to e-commerce sites, and how many more Windows users there are than Mac users.

No climactic battle to end this mystery; no unmasking of the evildoer or frustrating near-capture of Dr. Moriarty. To end the mystery of "Where's Sherlock?" we must look to Apple for a solution. m

Apple Goes Open Source with Mac Server

SURPRISE MOVE WILL ACCELERATE MAC OS DEVELOPMENT EFFORTS

by Stephen Beale

Apple has once again surprised the computer industry with its recent decision to offer key parts of Mac OS X Server as publicly available source code. Leaders of the open-source movement have praised Apple as the first major computer company to adopt an open-source strategy—the same approach that's made the Linux operating system a popular alternative to Windows NT. But what does this mean for Mac users and future versions of the Mac OS? Plenty, Apple says.

"It's as if we had hired a huge bunch of programmers for free," asserts Ernie Prabhakar, Apple's product manager for Mac OS X Server. "We'll have a final product with better performance and new features."

How It Works Apple has created a subset of Mac OS X Server called Darwin that includes Apple's versions of the Mach 2.5 microkernel, the Berkeley Systems Distribution (BSD) 4.4 version of Unix, the Apache Web server, and such Mac-specific technologies as AppleTalk and the HFS+ file system (see "What's in Mac OS X Server"). Apple has posted the Darwin source code (the underlying programming commands) on its Web site. Developers who agree to Apple's license agreement can download the source code, modify it, and include it in their own products. They don't have to pay royalties or license fees, but they do have to make their source-code modifications publicly available.

Apple is then free to incorporate any changes into future versions of Mac OS X Server—and Mac OS X, which uses the same Darwin components. Apple plans to release Mac OS X, its next-generation client operating system, later this year.

There are other benefits as well. Developers of G3 accelerators for older Macs could theoretically use Darwin to create drivers that would allow those Macs to run Mac OS X, which otherwise requires an Apple G3 Mac. Large Apple customers, especially universities, are now free to customize Mac OS X Server for their own needs. Developers who might otherwise turn to generic versions of Mach 2.5, Apache, and BSD 4.4 Unix—all avail-

continues

LARRY GOODE

What's in Mac OS X Server

MAC OS X SERVER, WHICH APPLE began shipping in March, represents the company's first serious foray into the corporate server market. Apple hopes that the product will be a major player in the market for hardware-software server configurations that sell for less than $5,000. The server also provides an early look at the modern OS technologies you'll find in Mac OS X, the next-generation client operating system slated for release later this year.

Mac OS X Server includes Apple-modified versions of the Mach 2.5 microkernel—a Unix-based OS core originally developed at Carnegie-Mellon University—and the Berkeley Systems Distribution (BSD) 4.4 version of Unix, a popular variant of the Unix operating system. Mach and BSD 4.4, along with the Apache Web server and such Apple technologies as AppleTalk and HFS+, form the basis for Darwin, which Apple is giving away to developers under an open-source strategy (see "Apple Goes Open Source with Mac Server").

Beyond the components in Darwin, Mac OS X Server also includes Apple file services; WebObjects 4.01, Apple's high-end Web production software; and NetBoot, which allows client Macs to boot off the server (see "Apple Introduces OS X Server," *News*, April 1999). Although based on Unix, the server has a Mac-like user interface that Darwin will not include.

A software-only version of Mac OS X Server sells for $499; Apple originally announced that the price would be $995. Apple also offers a $4,999 version bundled with a 400MHz Power Mac G3. The latter includes 256MB of memory, two 9GB hard drives, and a four-port Ethernet hub.

Apple's targeted customers include small businesses that are hoping to establish a cost-effective Web presence and education customers looking for an inexpensive and easy way to administer Mac-based networks. Competitors in this space include PC vendors, such as Dell and Compaq, that bundle their hardware with Windows NT, Netware, or Linux server software. Low-end configurations of Sun Microsystems' Solaris servers also compete for small-business customers, although these systems typically sell for more than $5,000.—STEPHEN BEALE

able currently as open-source software—will have a chance to work with Apple's versions of these components.

The move also makes Mac OS X Server a more viable competitor with Linux, the best-known open-source software. After all, it's hard to compete with a free product unless yours is also available in a free version.

Darwin's Limits Although it is a fully functional modern operating system, Darwin lacks some of the differentiating features in Mac OS X Server, including NetBoot, which allows Mac clients to boot from a server partition (see "Apple Introduces OS X Server," *News*, April 1999). Darwin also lacks a graphical user interface, but developers could theoretically port one of several freely available Linux windowing environments to the new OS. Apple interim CEO Steve Jobs says the company could move other Apple technologies to open source, but he has not announced specific plans.

Developers are free to modify Darwin in any way they choose. They can also create versions for Intel processors or other chips. But there's no guarantee the modified software will even run on a Mac.

Plugging Into InDesign

FORTHCOMING UTILITIES EXTEND ADOBE'S PAGE-LAYOUT SOFTWARE

by Stephen Beale

One strength of Adobe's new InDesign software is its extensibility. It implements even many built-in features, such as the toolbox, as InDesign plug-ins. One developer, a new company called PowrTools, says that with InDesign's flexible architecture, plug-in vendors can make the page-layout program "sit up and beg."

PowrTools (604/649-7560, www.powrtools.com) is one of several companies that say they will ship InDesign plug-ins shortly after the host program's expected summer release. PowrTable, the first in a planned series of PowrTools utilities, will let you create text tables for use in InDesign documents.

Also in the works:

Mapsoft (www.mapsoft.com) has announced Sherpa for Adobe InDesign, a plug-in that permits the creation of Adobe Acrobat PDF files that include links, bookmarks, forms, action handlers, and other interactive features.

ShadeTree Marketing (800/678-8848, www.borderguys.com) says it will offer an InDesign version of Fraemz, a program that lets you apply one of 404 high-resolution borders to text and picture boxes in InDesign documents. The program also features a drop-shadow function.

Virginia Systems (804/739-3200, www.virginiasystems.com) announced an InDesign version of Sonar Bookends, a $195 indexing utility. You can index books that span multiple documents, automatically reverse first and last names, and sort single-level or multilevel word lists.

Enfocus (888/363-6287, www.enfocus.com) says it will offer Enfocus PDF Check-Up for InDesign, a $150 preflighting program that inspects PDF files saved in InDesign for conditions likely to cause output problems.

Em Software (740/264-0583, www.emsoftware.com) announced InDesign versions of its database publishing plug-ins. Em's InData automatically formats data-

base or spreadsheet information for use in catalogs, directories, and other structured publications. InCatalog creates hot links between a product database and InDesign document so that changes in one automatically update in the other.

A Lowly Apprentice Production (888/818-5790, www.alap.com) announced that it will develop InDesign versions of ShadowCaster, a QuarkXTension for generating shadow effects, and Xpert Tools, a set of page-layout productivity aids.

LizardTech (888/320-9969, www.lizardtech.com) announced that it will offer an InDesign plug-in that lets you compress image files using the company's Multiresolution Seamless Image Database (MrSID) format. The com-

BRYAN WIGGINS

pany says that MrSID, which uses wavelet compression technology developed for the federal government, offers a 30:1 compression ratio with minimal loss of image quality. LizardTech will provide the plug-in as part of a suite of publishing tools and plans to include it in the InDesign package.

Other developers, including several vendors of QuarkXTensions, are less certain of their plans. Extensis (800/796-9798, www.extensis.com) promises that its Preflight Pro preflighting software will work with InDesign files, but says it plans to hold off on developing InDesign plug-ins until the program gains some significant market share. Markzware (800/300-3532, www.markzware.com), Vision's Edge (800/983-6337, www.visionsedge.com), and DK&A (888/488-8118, www.dka.com) say they plan to offer InDesign plug-ins. However, they have not announced any specific product plans or timetables.

Corel Readies Dual Software Upgrades

FACE-LIFTS FOR PHOTO-PAINT AND CORELDRAW

by Macworld Staff

Corel (800/772-6735, www.corel.com), continuing its efforts to gain a foothold in the Mac graphics market, is preparing upgrades to CorelDraw, its flagship illustration program, and Photo-Paint, an image-editing package that competes with Adobe Photoshop. Corel has been previewing CorelDraw 9 and Photo-Paint 9 for Windows. PR director Susan Gauthier says the company expects to ship Mac upgrades with identical features by the end of the year.

Both upgrades will feature interface refinements, new color-management features, and enhanced export functions. For example, you'll be able to export Adobe Acrobat PDF files using custom settings or one of three default styles: PDF for Prepress, PDF for Web, and PDF for Document Distribution. CorelDraw will give you the additional option of including fonts or converting text into curves as you export the document.

New color-management features in each program will let you include ICC color profiles in PDF, TIFF, and EPS files. You'll also be able to extract profiles from images in which they've been embedded.

Each program features a miniature preview dialog box for quick print previews and a preflight warning function that notifies you if problems arise.

Expect new drawing functions in CorelDraw 9, including a natural-media drawing tool and a multipoint mesh fill tool. Photo-Paint 9 adds import and export of QuickTime 3 movies, automated image-slicing for Web graphics, and a Contact Sheet wizard that produces a Web page of thumbnail images hyperlinked to the original photos.

Updates for Eight Meanwhile, Corel has released free updates of CorelDraw 8 and Photo-Paint 8 for Mac, featuring bug-fixes, performance enhancements, improved compatibility with Mac apps, and support for double-byte fonts. The 8.02 updates include a utility for creating profiles of a service bureau's equipment, abilities, and file requirements. Photo-Paint 8.02 also directly supports TWAIN plug-ins.

Epson, Ricoh Debut Color Laser Printers

EPSON COLORPAGE 8000 FEATURES EFI FIERY RIP

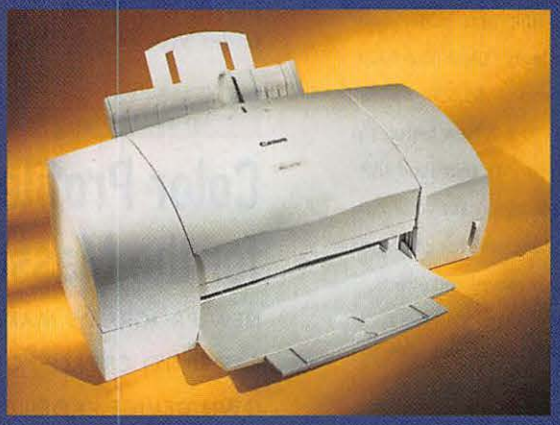

by Macworld Staff

Ricoh (800/955-3453, www.ricoh-usa.com) is an established vendor of digital color copiers, and Epson America (800/463-7766, http://prographics.epson.com) is well known for its color ink-jet printers. Now both are moving in new directions by offering their first color laser printers.

Ricoh has introduced a pair of color lasers. The $2,395 AP204, scheduled to ship by the time you read this, features 600-dpi resolution, a PostScript-clone controller, and a maximum color print speed of 4 pages per minute. It handles letter-size pages in its standard 250-sheet input tray, but you can also print on legal-size stocks by adding an optional second cassette. This May, Ricoh plans to ship the tabloid-format AP305. Pricing has not been set.

Epson's ColorPage 8000 uses the same 600-dpi tabloid-format printing engine found in recently introduced color laser printers from QMS and Tektronix. However, while those printers use built-in controllers, the ColorPage

continues

Canon Returns to the Mac

WELCOME BACK, CANON. THE COMPANY THAT DEVELoped the ink-jet engines for the Color StyleWriter 2500 and other Apple printers has returned to the Mac market with the BJC-6000, an ink-jet printer with an optional interface for USB-equipped Macs. Canon (800/652-2666, www.usa.canon.com) claims that the BJC-6000 is its fastest ink-jet printer ever, producing up to 5 color pages or 8 monochrome pages per minute. The printer offers maximum resolution of 1,440 by 720 dpi and uses individual tanks for each color, so you don't have to replace all the CMYK inks when one runs out. The $249 printer requires a $69 USB adapter to work with a Mac. Canon offers an optional $43 Photo Ink cartridge for producing photo-quality prints.—MICHAEL GOWAN

ARNOLD-TIOSEJO

Product WATCH

Acrobat Additions Several companies have joined Adobe Systems' Acrobat act with new plug-ins. Enfocus Software's (888/363-6287, www.enfocus.com) $295 PitStop 4.0 performs preflight checks and lets you edit text and objects in PDF files. Quite a Box of Tricks, a $205 PDF utility suite from Quite Software (www.quite.com), features enhanced RGB-to-CMYK conversion and image-reduction features. The company's Quite Imposing Plus, a $599 imposition program, takes advantage of Acrobat's new maximum page size, 200 by 200 inches.

Animated Features Animators can forgo ink and paper with Linker Systems' (949/552-1904, www.linker.com) $5,000 Animation Stand Pro 4.0. New features in the cel-based 2-D animation software include automatic color correction and support for combined simultaneous moves and effects.

Unplugged Now you can use Adobe Photoshop plug-ins even if you don't have Photoshop. Vertigo Software's (604/684-2113, www.vertigo3d.com) $39 Advertizer Web-graphics utility lets you create banners by importing an image and applying Photoshop plug-in effects.

Direct Savings Looking for a new screen saver? Create your own with CinéMac 1.5. This $299 Macromedia Director Xtra from MacSourcery (800/622-7723, www.macsourcery.com) converts Director 7 files to screen savers.

—EDITED BY MICHAEL GOWAN

Ricoh's $2,395 AP204 prints at 600 dpi on letter-size pages.

includes an external EFI Fiery print server with built-in PostScript 3, networking, and color-management capabilities. Epson will offer the printer exclusively through Ikon Office Solutions (610/296-8000, www.ikon.com). The printer and Fiery server together will sell for just under $10,000.

Color Profiles for the Masses

NEW PROGRAMS MAKE IT EASIER TO CREATE YOUR OWN DEVICE PROFILES

by Stephen Beale

Software developers are seeking to demystify the arcane science of color management by introducing inexpensive products that make it easy to create your own color-device profiles. These profiles, designed for use with Apple ColorSync and other color-management systems, provide information about the color-reproduction characteristics of specific monitors, scanners, and printers.

Monaco Systems (978/749-9944, www.monacosys.com) has introduced MonacoEZcolor, a $299 profiling package that's also bundled with Epson's Expression 800 flatbed scanner as MonacoProfiler Lite. To create a scanner profile, you simply scan a standard IT8 target; the program analyzes the scanned color values and compares them with the known values in the target to determine the scanner's color characteristics.

Creating a printer profile is a little more complicated: you print a page from the program that includes a set of color swatches in the upper half, then you attach the same IT8 target to the bottom half and scan the page. You can profile monitors by adjusting a series of on-screen images; the program also accepts data from Monaco's $199 MonacoSensor, a hardware device that measures the actual colors that the monitor produces.

Color Solutions (760/436-6593, www.color.com) has introduced ColorBlind Prove-It, a monitor-profiling package for local area networks. In addition to creating monitor profiles, you can use the program to view the color characteristics of any monitor on the network. A software-only version will sell for less than $50; a version with a monitor sensor will set you back $299. Color Solutions also offers a $999 package called ColorBlind Matchbox that combines a colorimeter with color-profiling software for scanners, monitors, and printers.

ProfileEditor from Color Partnership (800/554-8688, www.colorpartnership.com) is a $245 program that lets you create profiles for printers and other output devices by visually comparing a printed sample image with one displayed on a calibrated monitor. You adjust the on-screen display to match the print, and the program generates a profile.

Hexachrome Help It's not a color-management product, but Pantone's (888/726-8663, www.pantone.com) new $129 HexVector plug-in for Adobe Illustrator makes it easier to match spot colors by giving Illustrator users access to the company's Hexachrome system. Macromedia FreeHand already offers built-in Hexachrome support.

In any print job there are two ways to specify a spot color: you can simulate it using CMYK process colors, or produce an extra plate for the spot-color ink. The former makes it difficult to get an exact color match, but the latter is typically more expensive and cumbersome. Pantone says that Hexachrome, which uses six process colors rather than the standard four, can accurately reproduce 95 percent of Pantone Matching System colors, compared with about 50 percent in CMYK.

Certification Setting up a reliable color-management system, especially in a high-volume production environment, can still be a challenge. The Graphic Arts Technical Foundation (800/910-4283, www.gatf.org), a nonprofit trade group, has teamed with Apple Computer to provide a certification program for color-management specialists.

To be certified, printing companies and service bureaus must pay a fee and pass a one-day audit in which they show proficiency in using a ColorSync-based color-management system. The foundation says certified companies will be well positioned to help customers by educating them about color management and providing customized device profiles.

Just Like You, It Won't Work on a PC.

The TelePort™ Internal 56K for the new Power Macintosh® G3.

At Global Village® we refuse to make products for the PC. In fact, all we do is make modems and modem software for the Mac®. As a result, you get cool features and productivity tools no other modem offers, including:

Reviews

Palm V

PALMTOP NOW MORE MAC-LIKE THAN EVER

SUZANNE ROADY

CONSIDER THE SIMILARITIES between the PalmPilot, the smash-hit pocket computer, and the Macintosh: both devices are based on a Motorola chip, they have nearly identical user interfaces, and both reflect an obsession with simplicity and intelligent design. Even the designers are the same—60 percent of Palm Computing's employees once worked at Apple. And yet for the first years of the PalmPilot's existence, its connections to the Mac were crude at best.

Almost overnight, everything has changed. With the release of 3Com/Palm Computing's long-awaited MacPac 2 (see the sidebar), at last we can heartily recommend the PalmPilot as a Macintosh peripheral. An explosion of third-party software conduits connects all kinds of Mac data—FileMaker, Microsoft Word and Excel, and Intuit Quicken documents, plus your calendar and address-book information—to the PalmPilot with the press of a button. And 3Com/Palm Computing has released a pair of new models: the Palm IIIx and the ultrachic Palm V, whose sleek, sculpted, heat-blasted aluminum case seems inspired by the same curvy coolness factor as Apple's own recent models.

Style Statement

The stunning-looking Palm V represents a pure hardware makeover—it's slightly shorter and narrower than previous models, and much thinner and lighter (0.4 inches thick, 3.8 ounces). This shrinkage makes it even likelier that you'll carry the Palm V with you.

The palmtop's superthin profile hints at the next big change: this is the first model not powered by AAA batteries. Instead, a LiIon battery drives it; the battery gets recharged whenever the Palm V sits in its new, AC-powered HotSync cradle. One charge lasts approximately a month, a complete drained-to-full charge takes 90 minutes, and just one HotSync (two-way update) a day is enough to keep the Palm V fully charged, according to the company. This new battery scheme is arguably better for both the environment and your battery budget. It also means that you can leave the Palm V turned on all day as it sits in its cradle, displaying your schedule, a clock, or even a family photo.

On the other hand, since the device now draws power through its sole connector—its HotSync jack—no existing add-ons fit the Palm V. All Palm peripherals must be redesigned, including the

REAL PRODUCTS REAL RATINGS
Reviews you can trust: Macworld rates only final shipping products, not prototypes. What we review is what you can actually buy.
OUTSTANDING: ♦♦♦♦♦ VERY GOOD: ♦♦♦♦ GOOD: ♦♦♦ FLAWED: ♦♦ UNACCEPTABLE: ♦

Delorme Tripmate (a GPS satellite receiver) and LandWare's GoType portable PalmPilot keyboard (the company has already announced a Palm V–compatible version). Nor will Palm's own snap-on Palm modem fit the Palm V; you'll have to buy the sleek new $170 Palm V clip-on modem. (A $50 travel kit, featuring a recharging cord that doesn't require the cradle, is also available.)

The Palm V's other dramatic new feature is its razor-sharp screen. Based on a new film technology from 3M, it provides a light yellow-green background for text and graphics, which seem to float on the glass's surface. (PalmPilot fans who clamor for a color screen should note the cautionary tale of the new color Windows CE palmtops, whose batteries die after only eight hours of use. Compare that with two months for the Palm IIIx and one month for the Palm V.) Unfortunately, both the Palm V and the Palm IIIx do something bizarre when you turn on the backlighting: rather than simply lighting up, Indiglo-like, as on previous models, the entire screen also inverts black and white. The effect is disconcerting and not necessarily more readable than the original scheme.

3Com has solved the contrast-knob problem at last. On the original PalmPilot models, it was all too easy to bump off this knob in your pocket; the Palm III recessed the knob so deeply it was almost inaccessible. On the Palm V, you press a physical button to summon an on-screen contrast slider—a great improvement.

The rest of the Palm V story involves low-key touches: there's now a stylus slot on both sides of the device, a nod to left-handed users. (The Palm V includes a leatherette screen cover; one edge slides into the unused stylus slot as a hinge.) And 3Com/Palm Computing sells a line of Palm V accessories, including a combination stylus–ink pen and a head-turning, brushed-aluminum hard case (this prevents accidental button-pressing in your pocket, which the leather flap often fails to prevent).

Less Flashy Sibling

Although the Palm V is remarkably beautiful, it also costs $80 more than its predecessor, the Palm III, and doesn't add features or memory. (On the other hand, the Palm V's 2MB go a long way; a typical Palm program is under 20K.) The less flashy but more practical buy is the Palm IIIx (♦♦♦♦½; $369 list price). This model is nearly identical to the Palm III but sports twice the memory, a screen almost as good as the Palm V's, an expansion slot, and a more rugged circuit-board design. (The budget-conscious should also note that the Palm IIIx pushes the previous model, the Palm III, down to well below $300 and the two-year-old PalmPilot models to less than $200.)

Neither new model introduces any software changes. Skeptics may grumble, but there's much to admire about a company that refuses to pile new features, Microsoft-like, on a machine popular for its speed, simplicity, and elegance. Furthermore, remember that the Palm III, IIIx, and V are flash-ROM upgradable—in other words, when 3Com does decide to update the software, you'll be able to do so by downloading a software updater to your Macintosh.

Macworld's Buying Advice

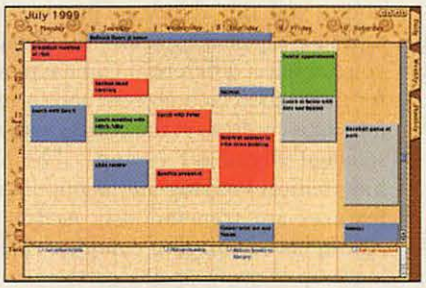

The Palm V is the StarTac phone or Mont Blanc pen of pocket electronics; the Palm IIIx is the rugged workhorse. Both new models represent careful, welcome improvements to one of the most beautifully conceived pieces of electronics since the Macintosh itself.—DAVID POGUE

RATING: ♦♦♦♦ **PROS:** Gorgeous, slender case design; outstanding new screen technology; rechargeable batteries. **CONS:** Expensive; incompatible with existing add-ons. **COMPANY:** 3Com/Palm Computing (800/881-7256, www.palm.com). **LIST PRICE:** $449.

MacPac 2

REBORN PIM SYNCS WITH PALMS

THE LONG-AWAITED PALM-compatible version of Claris Organizer, which 3Com acquired from Apple last year, is here at last. Like Organizer, 3Com/Palm Computing's MacPac 2 combines an easy-to-use scheduler and contact manager in one convenient package—but it can also share data with Palm organizers.

Full Calendar MacPac 2's multiday view shows banners and appointments on top, to-do's below.

You can access MacPac's datebook views from the tool bar or by clicking on tabs in the calendar window. Schedule items include timed appointments, banner events, and to-do's (although there's no place to describe events). The contact manager sports all the customary data-entry aids and supports popular formats for printing envelopes and labels. An optional Instant Desktop menu lists your favorite contacts' names and phone numbers, along with the current day's events and tasks.

MacPac is an excellent stand-alone PIM, but its real strength is its ability to share data with Palm organizers. On the plus side, 3Com has done an admirable job of writing fast, reliable conduits to handle the flow of data to and from the Palm hardware. But if you're expecting the desktop software to mirror the data on your organizer faithfully, you may be disappointed. For example, untimed events that repeat daily, weekly, or monthly don't transfer from the Palm to the desktop. Even more annoying, notes linked to calendar items on the Mac lose their attachments when you transfer them to the Palm.

Macworld's Buying Advice

MacPac 2 will probably satisfy most Palm users. But if you find the inconsistencies between the desktop and the palmtop frustrating, try Chronos's $50 Consultant (see *Reviews*, April 1999)—it syncs with Palm organizers and lets users share contact and schedule data.—FRANKLIN TESSLER

RATING: ♦♦♦½ **PROS:** Syncs reliably with Palm devices. **CONS:** Desktop software doesn't always mirror data on Palm. **COMPANY:** 3Com/Palm Computing (800/881-7256, www.palm.com). **LIST PRICE:** Free for download; on CD, with adapter cable, $15.

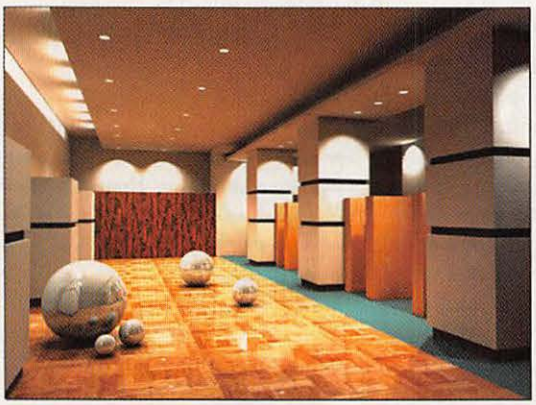

form-Z 3.0

INDUSTRIAL-STRENGTH 3-D MODELING

AUTO-DES-SYS'S FORM-Z, WITH its strong feature set and range of geometry-creation capabilities, has long been the high-end modeling package to beat on the Macintosh. Version 3.0.2 expands form-Z's modeling prowess in both obvious and subtle ways, and it offers (at a price) an improved renderer that delivers a degree of realism not previously attainable without a separate rendering program. It's not designed to appeal to the 3-D novice, but the many enhancements will please advanced users.

A Better Modeling Model

form-Z's forte has always been 3-D modeling, and this revision brings a variety of enhancements to the drafting table. Unlike previous versions, form-Z 3.0 supports true NURBS (nonuniform rational B-spline) objects. In addition, the program now lets you mix and match editing modes regardless of how the objects were created—for example, you can easily convert a cylindrical shape created as a basic primitive into a NURBS or *patch* object (one that can be broken into nonuniform constituent chunks). Version 3.0 supports the full range of patch operations, including custom subdivisions and attaching and stitching patches. Spline handling has also been beefed up with B-splines and quadratic and cubic Bézier splines for creating complex shapes. These major improvements—combined with an already potent variety of modeling tools—solidify form-Z's position as the most capable 3-D modeling package for the Macintosh.

Radiant RadioZity With the optional RadioZity rendering module, form-Z 3.0 can simulate real-world lighting conditions and produce exquisitely realistic scenes.

Some of the more subtle improvements in the modeling realm include support for skinning between sources that have different numbers of vertex points and the ability to preview the expanded alignment options—for example, you can select different alignment modes for a set of selected objects, and form-Z interactively displays the objects with the selected alignment settings. The new hierarchical layering and manipulation features are tremendously useful for editing and managing complex objects made up of many smaller parts.

Version 3.0's interface, although it still takes some effort to master, is more intuitive for the production-minded 3-D artist and a bit more approachable for new users. For example, it's more customizable; you can edit the core tool palettes to display only the items you use the most, and arrange tools in any combination. The new Options palette displays most of a selected object's vital statistics—a simple task that required bringing up a dialog box in previous versions—and lets you edit object parameters. Overall, this version seems more accessible than previous ones, even though learning the program still requires a substantial investment of time and effort.

Pictures at an Exhibition

In the rendering arena, form-Z's improvements include new shaders for rendering snow, fog, and volumetric lighting—welcome additions for architectural applications. An optional module, RadioZity, offers strikingly realistic radiosity rendering (which simulates light energy in a scene, resulting in much more realistic shadow and color detail than ray tracing can offer). If you need ray-tracing capabilities, you have to purchase the RenderZone module.

It's also important to note that RadioZity, while delivering very high rendering quality, is simply not fast enough for even the most basic camera animation—for example, flying around a building that is illuminated by more than a couple of light sources would take an inordinate amount of time to render. This is not a limitation of form-Z or RadioZity's implementation of radiosity rendering; the complex calculations that radiosity requires are simply too much for anything more complicated than a still image frame.

Although objects and scenes are usually best exported to a separate animation program (such as Electric Image's ElectricImage), form-Z now offers basic tools for animating the camera in a scene. These tools allow you to create fly-throughs of 3-D scenarios and form-Z documents. Unfortunately, because you can't do anything more complex (such as moving the actual objects in a scene), you still need an external animation program for anything but the simplest tasks.

This requirement is a drawback for anyone seeking a one-stop solution for 3-D animation; on the other hand, form-Z's intended audience is clearly more interested in industrial-strength modeling than in advanced animation. But the relatively high price of the rendering options, combined with form-Z's limited animation controls, still force serious users to buy a separate rendering and animation program—not an attractive option for those on a budget.

Macworld's Buying Advice

form-Z remains the most powerful, flexible 3-D modeler for the Macintosh. Although better object animation would have been welcome, form-Z has never been billed as an animation package. The bottom line: if you can't model something in form-Z, chances are you can't model it on a Macintosh.—DAVID BIEDNY

RATING: ♦♦♦♦½ **PROS:** Useful additions to modeler; true NURBS support; customizable interface; enhanced scene-organization tools. **CONS:** Animation limited to camera movement; expensive rendering options. **COMPANY:** auto-des-sys (614/488-8838, www.formz.com). **LIST PRICE:** $1,495; with RenderZone, $1,995; with RadioZity and RenderZone, $2,390.

Accounting Software

NEW OPTIONS FOR SMALL-BUSINESS ACCOUNTING

THE PAST FEW YEARS HAVE SEEN significant changes in the Mac accounting-software landscape: Intuit stopped developing QuickBooks for the Mac, Peachtree Accounting resurfaced as Aatrix Accounting, and BestWare updated M.Y.O.B. Accounting Plus with time-billing support and links to Microsoft Office 98.

Both Aatrix Accounting 3.0 and M.Y.O.B. Accounting Plus 8.0 do a creditable job of shielding users from the mysteries of double-entry accounting while offering the essential components of a small-business accounting system. However, M.Y.O.B.'s additional features and better stability make it a smarter choice for most small businesses.

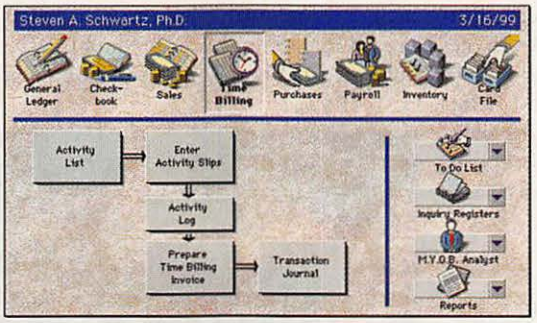

Getting Started

Both programs give you a sample company file to experiment with before committing your financial data. To speed the setup process, M.Y.O.B. uses wizards that help you select and modify a chart of accounts; enter vendor, customer, and employee contact information and historical data; choose a default invoice and purchase-order form; and customize the program's operation.

Aatrix Accounting also uses a wizard to collect basic information and create your chart of accounts, although you have fewer sample companies to choose from. As you enter your setup information, an on-screen checklist reminds you of the incomplete tasks. Unfortunately, I wasn't able to get check marks to appear for the completed sections.

Perhaps because Aatrix isn't as feature-rich as M.Y.O.B., it's easier to use for basic operations such as paying bills and recording receipts. You can quickly select an activity from the hierarchical pop-ups at the bottom of the screen; to enter a vendor code, customer code, or account identifier, you double-click on the field or click on the magnifying-glass icon. Ever-present Smart Guides display field-related help information. And while the online tutorial needs updating (it still refers to Peachtree Accounting), the Help file does contain an excellent introduction to double-entry accounting.

M.Y.O.B. has a more polished interface and a more professional-looking manual. You select operations from a graphic, hierarchical interface similar to Aatrix Accounting's (see "Selecting Activities").

Selecting Activities To select activities in M.Y.O.B. Accounting Plus 8.0, you click on buttons in the hierarchical interface; drop-down menus list reports and other advanced features.

However, many seemingly simple operations force you to search through the manual and the myriad of help systems; I frequently found myself looking in the wrong sections of the program for previously entered data. Even the method of displaying code lists takes getting used to. For example, to view a list of vendor or account codes, you must tab out of the field.

M.Y.O.B.'s new support for time-billing accounting will make it attractive to service-oriented businesses. You define activities that are billed according to an employee's hourly rate, a customer-specific rate, or an activity rate. And you track work in progress with activity slips; times can be filled in by hand or by clicking on the slip's timer button.

Reports, Forms, and Security

Both programs offer many standard reports, along with customizable forms, that you can view on screen or print. Here, M.Y.O.B. is clearly superior. You can easily change the order of the fields, which fields appear in a report, and the fields' formatting. You can customize forms by dragging or resizing fields and pasting graphics from the Clipboard. Version 8 can also export data to Microsoft Office 98—a feature previously available only to Windows users.

Aatrix Accounting's approach to customizing reports and forms, on the other hand, is reminiscent of DOS accounting programs. Few users will have the patience to do more than add a logo to their forms.

M.Y.O.B. is designed for multiple users; you just buy a license for each workstation you want to add. Although you can run Aatrix Accounting in a multiuser environment, the company says it's too slow to be used that way. In either program, you can set passwords that allow access to the entire package or only to certain functions or modules.

Each program has a backup command to safeguard your data files. Unfortunately, Aatrix's backup procedure repeatedly crashed our test machine, even after a clean install of OS 8.1; backups had to be restored manually. (The company is aware of the problem and says it affects only users of certain versions of the OS prior to 8.5.)

Macworld's Buying Advice

Of the two programs, M.Y.O.B. Accounting Plus 8.0 is clearly the more polished, evolved, and feature rich; Aatrix Accounting 3.0, although easy to learn and use, has stability problems and lacks time-billing and multiuser features. Regardless of which program you choose, nonaccountants should expect to seek professional assistance when getting started and plan on a relatively long learning period.—STEVEN SCHWARTZ

Aatrix Accounting 3.0

RATING: ♦♦½ **PROS:** Choosing modules and entering data is easy. **CONS:** Complicated report writer and forms customization; frequent crashes; doesn't support multiple users. **COMPANY:** Aatrix Software (800/426-0854, www.aatrix.com). **LIST PRICE:** $169.

M.Y.O.B. Accounting Plus 8.0

RATING: ♦♦♦♦ **PROS:** Excellent setup routine; time-billing support; links to Microsoft Office; multiuser ready. **CONS:** Difficult to learn; confusing help system. **COMPANY:** BestWare (800/322-6962, www.bestware.com). **LIST PRICE:** $199, plus $99 per workstation license.

Epson Stylus Color 900

INK-JET PRINTER BREAKS THE SPEED BARRIER

BACK IN APPLE'S DARKEST DAYS, Epson was the only major manufacturer of ink-jet printers for the Mac. Now that Apple is healthy again, Hewlett-Packard and Canon are moving into Epson's territory with new Mac-based ink-jet models. But Epson isn't resting on its Mac laurels; the company's new $449 Stylus Color 900 offers unprecedented speed and print quality with an added bonus—it works with older Macs that have serial ports, in addition to the new USB-equipped Power Mac G3 systems.

Speed Demon

Two features distinguish the Stylus Color 900 from its predecessor, the Stylus Color 850: speed and image quality. Epson says the Stylus Color 900 is its fastest ink-jet printer; Macworld Lab tests show that while it doesn't quite match the rated 10-ppm print speed, it's a speed demon at lower resolutions.

We produced a variety of sample prints on both plain and photo-quality paper, at 180 by 180 dpi, 360 by 360 dpi, and 720 by 1,440 dpi. One unusual aspect of the printer is that its speed is nearly identical at 180 dpi and 360 dpi: an 18MB Adobe Photoshop image took 50 seconds to print at the lower resolution and 55 seconds at the higher setting. When we switched to the 360-dpi fine mode—which offers better image quality—the same file printed in about 75 seconds.

We saw similar results when printing a seven-page QuarkXPress document: it took 98 seconds to print at 360 dpi in normal mode and nearly 4 minutes at 360 dpi in fine mode. However, the printer slows considerably at its maximum resolution of 1,440 by 760 dpi: the Photoshop file printed in about 10.5 minutes, while the QuarkXPress document took nearly an hour.

Variable Dots

Epson has boosted the printer's image quality by reducing the minimum ink-drop size to 3 picoliters, compared with 11 picoliters in the Stylus Color 850 and 6 in the more recent Stylus Color 740 (see *Reviews*, January 1999). The smaller drop size allows the Stylus Color 900 to generate variable-size dots for sharper edges and enhanced photo quality.

Although it's a four-color printer, the Stylus Color 900 produces photographic images whose quality appears to equal or exceed that of images printed on the six-color Stylus Photo 700. Even printed at 360 dpi on plain paper, images looked very good. Printed at full resolution on photo-quality glossy paper, the images were spectacular (although one sample photo in our test suite appeared a bit dark when we used the default settings). Text, line art, and photos all showed sharp edge detail, and text printed on plain paper was virtually indistinguishable from laser-printer output.

GIBSON

Thanks to the smaller drop size in the Stylus Color 900, you'll see the biggest difference in photos with lots of fine detail. With softer images, you won't see as much difference between the Stylus Color 900 and the Stylus Color 740 (which also uses variable-dot printing).

The printer uses two ink cartridges, one for black ($33) and the other for cyan, magenta, and yellow ($40). Epson says the black cartridge is good for 840 pages—assuming 5 percent coverage at 360 dpi—while the color cartridge produces 570 pages at the same resolution. This works out to less than 4 cents per page for black and about 7 cents for color—quite reasonable for an ink-jet printer. However, with a three-color cartridge, you have to replace the entire unit if even one color runs out.

Flexible Bundle

Epson ships the printer with its standard driver software, which includes tools for adjusting output and checking the printer's operating status. You can reposition output on the page; bump cyan, magenta, and yellow channels up or down using a curves function; and check the ink level in each cartridge. The driver automatically adjusts output to match the media type you've selected; you can also choose from Apple's ColorSync or Epson's built-in color-management software. Although the Stylus Color 900 produces CMYK output, you get the best results when generating RGB images, which the printer converts to CMYK as it prints the pages.

The Stylus Color 900 has no built-in network connections, although you can use the serial or USB ports to add it to an AppleTalk network. A $649 networked version with a built-in 10/100BaseTX card should be available by the time you read this. You can also add an Ethernet card to the base model.

Epson is offering an unusual software bundle in which you can choose any two Mac programs from a list of five: Dr. Solomon's Virex, Lotus Organizer 97 GS, Sierra's Print Artist 4.0, Berkeley Systems' You Don't Know Jack Volume 1, and Blizzard Entertainment's Warcraft II: Tides of Darkness.

Macworld's Buying Advice

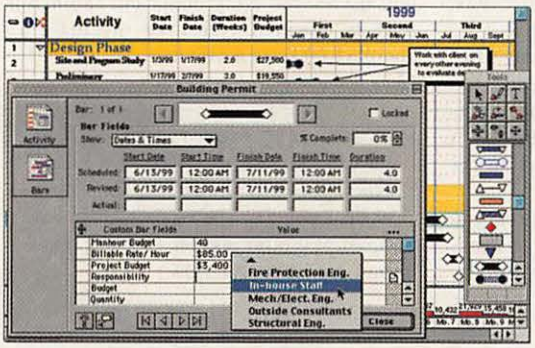

The Stylus Color 900 continues Epson's tradition of bringing groundbreaking ink-jet printing technologies to the Mac market. Its high speed and relatively inexpensive consumables make it a viable alternative to costlier color lasers for general business applications. However, it's pricey for an ink-jet printer, and you lose almost all of the speed benefits when printing at full resolution. If you're willing to compromise a little on speed and photo quality, consider the Stylus Color 740, which costs about $170 less.—STEPHEN BEALE

RATING: ♦♦♦♦ **PROS:** Fast; excellent print quality. **CONS:** A bit pricey for an ink-jet printer; much slower at high resolutions. **COMPANY:** Epson America (800/463-7766, www.epson.com). **COMPANY'S ESTIMATED PRICE:** $449.

Job-Management Software

KEEP PROJECTS ON TRACK WITH FASTTRACK SCHEDULE, JOB MANAGER, AND JOBORDER

SERVICE BUSINESSES WITH 10 to 200 employees face unusual challenges in automating their billing and job-tracking processes. The three packages covered here—AEC Software's FastTrack Schedule 6.01, Management Software's JobOrder 7.02, and MetaCommunications' Job Manager 1.5—offer productive job-management functions without the cost and complexity of high-end vertical systems.

Visual Timeline FastTrack Schedule makes it easy to display a job's progress.

JobOrder 7.02, based on the ACI US 4th Dimension database, will appeal to ad agencies, design shops, consultants, and engineering firms. It handles job planning and estimating, scheduling, proposal creation, inventory management, and accounting. The software requires much attention to detail and takes some time to learn. Setting up JobOrder takes from a few hours to several days; you enter everything from sales-tax rates and work-center names to general-ledger account numbers.

Activities revolve around a job, which you initiate by creating a proposal specifying the time and material resources required. Using one of many forms, you select general work categories and enter the duration of each phase. Once a client approves your proposal and the job begins, each person records his or her daily activities using time slips. This data automatically flows to the accounting area, yielding up-to-the-moment invoices and financial listings.

JobOrder offers valuable management tools. For example, a timeline, automatically created when you turn an estimate into a job, shows underused or overbooked resources. The program also generates extensive printed forms and reports.

Creative Order Management

Job Manager 1.5 is similar to JobOrder in a variety of ways. It tracks jobs from initial order entry through invoicing; employees record time and material data, and the program can generate management reports at any time. However, Job Manager lacks JobOrder's formal estimating step, and you need a third-party application for detailed accounting. The back-end database is Microsoft SQL Server, requiring Windows NT.

Appropriate for commercial printers, publishers, and design shops, Job Manager has much going for it. The program is reliable and easy to customize, and it usually works more quickly than JobOrder. Creating a new job requires only a job number, name, and customer; forms are prefilled based on a user's log-in.

So how do you maintain discipline and consistency? Electronic job tickets track employee time, and workflow templates graphically show how each job should run through your production cycle. As a result, managers can determine just when a job entered and left each cost center and who worked on it. Version 1.5 adds the ability to track outside purchases, and gives you the option of including sales and service representatives in the workflow.

Scheduling without the Overkill

Traditional project-management software demands that users understand a lot of theory. FastTrack Schedule 6.01 produces colorful timelines without requiring knowledge of resource loading or PERT charts. Version 6.01 further simplifies scheduling by automatically linking tasks; exchanging schedules with Microsoft Project; and supporting Mac OS 8.5 features, such as folder actions.

To build a schedule, you simply position an activity bar in the timeline graph; start and finish times automatically register in the corresponding data columns. After you enter more tasks, the built-in outliner lets you arrange them in unlimited outline levels.

FastTrack Schedule doesn't recognize resources, such as people and material, but its core scheduling is quite good, and it is far easier to use than full-fledged project managers.

Macworld's Buying Advice

JobOrder is more involved and costs more per client than does Job Manager, but the former accommodates a wider range of businesses and includes accounting functions. Still, design firms and other creative businesses will find few drawbacks in Job Manager, so you should consider it first. If you simply need to keep more-accurate timetables, we recommend FastTrack Schedule.—MIKE HECK

FastTrack Schedule 6.01

RATING: ♦♦♦♦ **PROS:** Automatic task linking, scripting, filtering, and activity outlining; fine presentation tools. **CONS:** No resource management. **COMPANY:** AEC Software (800/346-9413, www.aecsoft.com). **LIST PRICE:** $199.

Job Manager 1.5

RATING: ♦♦♦♦ **PROS:** Extensive job tracking and costing; straightforward navigation. **CONS:** Requires Windows NT server; no basic accounting. **COMPANY:** MetaCommunications (800/771-6382, www.jobmanager.com). **LIST PRICE:** Five users, $3,699.

JobOrder 7.02

RATING: ♦♦♦½ **PROS:** Customizable quotes and bids; timelines; double-entry accounting. **CONS:** Takes time to set up and learn; costly. **COMPANY:** Management Software (607/756-4150, www.joborder.com). **LIST PRICE:** Five users, $7,840; setup and training, $250.

Epson Expression 800

MIDRANGE SCANNING AT A LOW-END PRICE

SUZANNE ROADY

SCANNERS KEEP GETTING BETTER and less expensive, but even within this competitive landscape, Epson's Expression 800 is a breakthrough in price and performance. When equipped with an optional transparency adapter, it's the first under-$1,000 flatbed that we'd consider when scanning 35mm slides for anything other than the Web.

The scanner is available in three configurations. The $699 Executive includes Epson TWAIN Pro and LaserSoft SilverFast Lite scanning modules, Adobe Photoshop 5 LE, NewSoft Presto Page Manager, and Xerox TextBridge Classic OCR software. The $799 Artist model adds the full LaserSoft SilverFast 4 and Monaco Profiler Lite. But the real breakthrough comes in the $999 Pro package, which adds a transparency adapter to the Artist bundle, transforming the Expression 800 into a slide scanner.

The Expression 800 uses a quarter-stepping motor to move the scanner head in 3,200-dpi increments, producing a true optical resolution of 800 by 3,200 dpi. We've generally been skeptical about interpolated resolution in scanners, but at 2,400 by 2,400 dpi we found that the flatbed gives excellent results from 35mm slides. The dynamic range, quoted at 3.3, is adequate for most transparencies, although high-contrast slides may exhibit blocked or noisy shadows. The scanner is also fast and quiet, and it offers switchable SCSI termination.

LaserSoft's SilverFast 4.0 is a powerful scanner driver that functions as a standalone application or as a Photoshop plug-in. It's ColorSync-savvy, offers a full range of control, and allows you to scan directly to CMYK, RGB, or gray scale. The AutoPilot feature allows relative novices to produce good scans right off the bat, but achieving total mastery over SilverFast entails a fairly steep learning curve.

The software's Unsharp Masking filter works well—an important point because too much sharpening can create aliasing effects that reveal the horizontal interpolation. On the downside, it takes a lot of work to get good scans from color negatives.

Monaco Profiler Lite does a great job of creating profiles for the scanner and inkjet printers. Rather than forcing you to measure color patches with an expensive spectrophotometer or colorimeter, it uses the scanner to measure printed output.

Macworld's Buying Advice The Executive bundle is a good deal, but if you're happy with its functionality, you're also likely to be happy with a less expensive scanner. The Artist bundle is also a good deal, but the Pro version is the real breakthrough, letting you scan everything from 35mm film to 8-by-10-inch reflective originals for about $1,000.—BRUCE FRASER

RATING: ★★★★ **PROS:** Fast; handles a wide range of originals; strong software bundles. **CONS:** Color negatives are challenging. **COMPANY:** Epson America (800/463-7766, www.epson.com). **LIST PRICE:** Executive model, $699; Artist, $799; Pro, $999.

ImageAXS Pro 4.0

MIDRANGE IMAGE DATABASE

WHETHER YOU CALL THEM image databases or media-asset managers, programs that help you organize photos, illustrations, movies, sounds, and other elements are the current rage among media pros. ImageAXS Pro 4.0 occupies a middle ground among these programs, lacking networking capabilities but otherwise offering a full range of media-organizing tools, including the ability to automate operations through AppleScript.

In ImageAXS, creating an image database is easy: you can open image files from within the program or drag and drop folders from the Finder. You can then view the images as individual records, in a thumbnail window or in a Finder-like text list. Within each collection, images are organized into portfolios.

You can quickly tag a group of images using keywords; once you define a keyword, you can drag it to any records you choose. You can also create keyword hierarchies. In addition to assigning keywords, you can define an unlimited number of text fields for each collection.

Too Many Windows ImageAXS Pro 4.0 is flexible, but the interface tends to get a bit cluttered.

ImageAXS's scripting functions are also impressive. You can script most operations with AppleScript and use the program's recording mode to automate repetitive functions. An HTML Export function lets you quickly create Web pages containing thumbnail images; clicking on a thumbnail in a browser brings up the full image. You can also export selected images as self-launching slide shows.

Unfortunately, the program's multiple windows tend to clutter the interface. When viewing a single collection, you're likely to open the Text List window for fast sorting, the Thumbnail window to see the images, the Keyword window to assign keywords, and the Portfolio list to show all portfolios within that collection. If you perform a keyword search, any images you find appear in a temporary Portfolio window. It would be nice if the program took a more streamlined approach.

ImageAXS Pro supports most popular graphics and multimedia formats, including PICT, TIFF, JPEG, GIF, and all QuickTime 3 media types. However, it can display EPS files only if they include screen previews, and its support for native formats is limited to Adobe Photoshop.

Macworld's Buying Advice ImageAXS Pro 4.0 gives you flexibility when you're setting up collections and makes it easy to apply keywords to multiple image records. If you need a full-featured image database and can live without the networking functions, give it a look.—STEPHEN BEALE

RATING: ★★★½ **PROS:** Flexible, scriptable image database; easy-to-use keyword function. **CONS:** No networking capabilities; cluttered design. **COMPANY:** Digital Arts & Sciences (800/449-6220, www.dascorp.com). **LIST PRICE:** $299.

PC MacLAN 7.2 for Windows 95/98

PC CONNECTIVITY MUST-HAVE ADDS AWKWARD ARA SUPPORT

ABOUT A YEAR AGO, WE CHIDED Miramar Systems for offering Apple Remote Access (ARA) dial-up connectivity from PCs to Macs as a $179 companion product to the $199 PC MacLAN (see "Mac Life Preservers," April 1998). Happily, the companion product (PC MacLAN Remote) is no more; the new PC MacLAN 7.2 for Windows 95/98 now includes ARA support. But PC MacLAN Remote's biggest flaw remains in the new PC MacLAN: you must reboot your PC every time you switch between a dial-up ARA connection and a regular AppleTalk LAN connection.

Still, PC MacLAN is a wonderful tool that makes it amazingly easy to connect PCs and Macs. Once installed on your PC, it offers nearly invisible access to a PC from a Mac and vice versa. (Nothing needs to be installed on the Mac side.) From a Mac's perspective, the PC is simply another networked system available from the Chooser or Network Browser; from a PC's perspective, a Mac is simply another system in the Network Neighborhood.

In addition to supporting ARA, version 7.2 supports a handy new connectivity route: local and Internet networks based on AppleShare IP 5.0 and later. As Apple migrates from AppleTalk to TCP/IP, such connections will become more common. If your Mac servers are running AppleShare IP 6.0, however, they already support PC clients; you don't need PC MacLAN to let your PCs connect to them.

Easy Access PC MacLAN 7.2 for Windows 95/98 adds icons to the system tray, offering fast access to the program's file- and print-server controls.

Another welcome improvement is that network response time is noticeably faster. And PC MacLAN 7.2 adds two icons to the Windows system tray to give you double-click access to the file- and print-server software (which makes PCs and their printers visible to Macs).

There's still room for improvement in the program's manual, however. Rather than devoting a chapter to each key issue, the manual simply describes menu items and installation steps. This is a real flaw when you consider that networking software involves such complex issues as how to switch from ARA connections to networked AppleTalk, whether to enable TCP/IP for ARA connections on the client *and* server sides, and how to download fonts to a printer via the PC. The manual treats these topics skimpily and disjointedly.

Macworld's Buying Advice In spite of some lingering shortcomings, PC MacLAN 7.2 for Windows 95/98 is an essential product that does its job very well. It remains the easiest way for users and system administrators to connect Macs and PCs.—GALEN GRUMAN

RATING: ★★★★½ **PROS:** Faster LAN connections; adds ARA and AppleShare IP protocols. **CONS:** Must restart PC to switch between ARA and LAN connections; abysmal documentation. **COMPANY:** Miramar Systems (800/862-2526, www.miramarsys.com). **LIST PRICE:** $199.

Olympus P-330

VERSATILE SNAPSHOT PRINTER

USING THE SAME DYE-SUBLIMATION technology that's in the Olympus P-300 (see *Reviews*, August 1998), the company's new P-330 Digital Home Photo Printer can produce great-looking 4-by-5-inch photos (3.8-by-4.5-inch image size) from a computer, an Olympus digital camera, a SmartMedia card, or a video device such as a camcorder or VCR.

When connected to your Macintosh, the P-330 prints photos at 153 dpi (at a resolution of up to 688 by 512 pixels) or 306 dpi (up to 1,376 by 1,024 pixels). Slider controls let you adjust the color balance while previewing the image, but otherwise the driver options are limited.

A parallel port connects the P-330 to a PC or an Olympus D-500L, D-600L, or D-620L digital camera. When connecting to any of the latter, you can use the camera's menu system to produce a single image, a 16-up print, or an index print showing every shot in the camera. Although this is a convenient way to print your images, the parallel connection is slow. Fortunately, the P-330 includes a built-in reader for SmartMedia cards, the storage media for digital cameras from Olympus, Fuji, and other vendors. Just pop the card into the P-330 and pick the image you want to print; the photo rolls out in about two minutes.

Actually, it's not *quite* that simple. To use SmartMedia, you connect the printer to a video monitor or a TV with a composite-video input and then insert the card. When the images appear on screen, you select and print them using hardware controls. You can print a full-size photo or single or multiple images in a 4-, 9-, or 16-up layout. (When connecting to a VCR or camcorder, you can capture a single video frame or multiple frames at 2.5-second intervals.) A Trim option lets you select a portion of the image to print, though you're limited to two selection sizes (resulting in 1.5× and 2× enlargement). You're also limited to 16 fixed positions for the cropping window, restricting your ability to frame the image precisely.

The P-330 can produce images that approach the quality of traditional photos, but when you're printing without a computer, you're at the mercy of your camera. If you begin with a poorly shot image, there's little you can do to improve it.

Olympus sells paper and ribbon for the printer in $40 packs, good for 60 prints. Installing the ribbon cartridge is a snap: you just open a door and slide it in.

SUZANNE ROADY

Macworld's Buying Advice The Olympus P-330 is a great complement to digital cameras that use SmartMedia. The $449 price tag may seem high for a consumer printer, but it's a bargain compared with other dye-sublimation printers. If you want digital photos that are nearly indistinguishable from traditional photo prints, it's hard to go wrong with the P-330.—STEPHEN BEALE

RATING: ★★★★ **PROS:** Versatile; excellent image quality. **CONS:** Limited options when not printing from a computer. **COMPANY:** Olympus America (800/347-4027, www.olympus.com). **LIST PRICE:** $449.

PhotoScripter

PHOTOSHOP PLUG-IN ADDS SCRIPTABILITY

THE PROFESSIONAL PUBLISHING industry relies almost entirely on two programs: QuarkXPress and Adobe Photoshop. While we've long been able to automate mundane and repetitive tasks in QuarkXPress using AppleScript, the ability to script Photoshop has remained elusive—until now. Main Event Software's PhotoScripter 1.0 adds a robust scripting vocabulary to Photoshop 5, letting you control almost every aspect of this powerful program using simple text commands.

PhotoScripter is unique in that it offers no user interface: you simply install it by dragging it into Photoshop's Plug-ins folder and launching the program, and Photoshop is instantly scriptable. To take advantage of this new scriptability, you write AppleScripts in a program such as Script Editor (which comes with the Mac OS) or the more powerful Scripter from Main Event (see *Reviews*, April 1997).

Repetitive Motion PhotoScripter made it easy to create this image, which involved rotating and scaling a selection and applying Invert.

To understand what this plug-in really does, try opening Photoshop's AppleScript dictionary using one of these script-editing programs. Without PhotoScripter, the dictionary lists only one operation—**do script**, which simply runs an action you've created in Photoshop. With PhotoScripter, you can script everything, from making and transforming selections, to applying filters, to creating layers and editing their pixels.

But while the folks at Main Event really understand AppleScripting—and AppleScripters, whose success depends on how easily they can manipulate an application—they're not die-hard Photoshop users. For example, although PhotoScripter lets you define or adjust every point and control handle on a Bézier path and control each setting in the Calculations dialog box, it won't let you script common tasks such as copying a layer from one document to another.

Even though PhotoScripter doesn't run scripts blindingly fast (this is probably a limitation of Photoshop itself), it can usually execute a series of events faster than a mere mortal could. And because AppleScript lets you perform repeating loops, mathematical calculations, and conditional branching, you can create incredible images that would be too tedious even to consider doing by hand (see "Repetitive Motion"). Unfortunately, PhotoScripter doesn't make Photoshop "recordable"—it won't let you build scripts by stepping through the actions in the program.

Many of PhotoScripter's limitations stem from the fact that Adobe has, not surprisingly, kept some pieces of its program off limits to plug-in developers. For example, you can't control the settings in the Print and Page Setup dialog boxes, or query Photoshop to determine your image's properties.

Fortunately, the documentation is relatively good; the introduction to AppleScripting and the fundamentals of scripting Photoshop is excellent. But because the manual lacks an index, you have to paw through it until you find what you need.

Macworld's Buying Advice

PhotoScripter 1.0 lets you build scripts as powerful as Photoshop itself. If you're a professional scripter, it would be a valuable addition to your arsenal.—DAVID BLATNER

RATING: ★★★½ **PROS:** Excellent AppleScript vocabulary and dictionary; good manual. **CONS:** Can't control all Photoshop features; minor bugs; can't record actions. **COMPANY:** Main Event Software (800/616-8320, www.mainevent.com). **LIST PRICE:** Single-user version, $299; server-based production version, $999.

The New Landscape of 3D

The software that changed 3D is changing it again. Bryce® gives you the power to design, render and animate breathtaking natural 3D worlds and abstract sculptures.

Now, MetaCreations introduces Bryce® 4. with even more power and a new SkyLab, and many other new features, making Bryce® better than ever.

Easy to learn 3D

Bryce® creates stunning 3D worlds. Quickly make your own worlds and scenes with the intuitive interface. Easily fashion skies, mountains, seas and any object from Bryce®, and light it as you want. Simply save your image as HTML image maps, QuickTime and many other formats.

Create stunning worlds

In Bryce® you can make real skies, mountains, snow and trees. Or create images of Mars or remodel you home. Bryce® 4 includes megabytes of useful models, skies, textures, tutorials and expertly crafted scenes for you to disect and learn from.

Animate your work

With Bryce® you can make your images come to life by animating your worlds, and saving them as QuickTime, QTVR and VRML. Also export your terrains and textures in MetaStream™ and many other formats.

Bryce 4®

VectorWorks

REWORKING A CAD CLASSIC

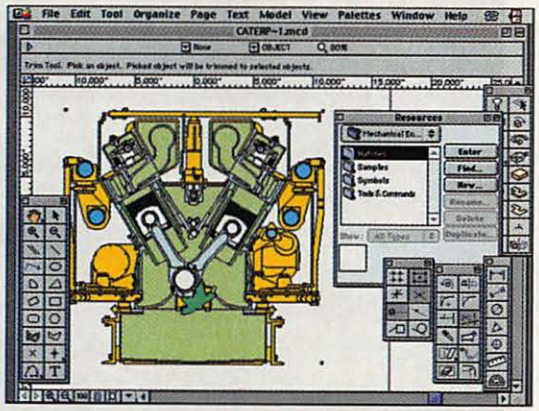

THE LAST RELEASE OF DIEHL Graphsoft's MiniCAD was version 7, but the latest release isn't called MiniCAD 8. With enough new content to merit a bump to version 10, the program has been reincarnated as VectorWorks 1.0—and there's nothing "mini" about its scope. Redesigned as a collection of modular objects rather than a single, monolithic block, this excellent program can tackle everything from architecture to theatrical lighting, with very modest hardware demands.

Updating the MiniCAD environment for the Web-aware, workgroup-oriented world of VectorWorks called for some big changes and a host of smaller tweaks. A major structural change is a redesign to accommodate plug-ins for special CAD functions. For example, although rendering—specifically, photo-realistic rendering with advanced lighting and display options—is crucial to presenting architectural designs to clients, it doesn't do much in HVAC or mechanical-parts design except take up disk space. Those who need it can add Diehl Graphsoft's $299 RenderWorks, a separate plug-in that functions inside VectorWorks.

Another important change is the addition of workgroup CAD, with a reference- or target-document–handling scheme that benefits from Diehl's observation of what *didn't* work smoothly in other CAD products' first-generation workgroup implementations. Unlike the latest versions of most other professional CAD programs, which want 96MB of RAM and the latest G3, VectorWorks—thanks to its careful modular design—fits into a mere 24MB of RAM and about 60MB of hard-disk space, with full libraries for everything from electronic design to landscaping. And the program is delightfully quick, even on older Macs. If you're stuck trying to do real CAD on a laptop, VectorWorks' humble demands make it your best bet.

Other improvements enhance VectorWorks' ease of use. For example, the Resource palette—a convenient window that holds frequently used objects—now has a Replicate button, so you can quickly generate and edit a family of similar objects (see "Pumpin'"). The program handles multiple undo's and redo's, and the new plug-in architecture lets you add curved walls, assorted building elements, and basic solid forms. A greater selection of graphic input and output formats, including JPEG and Windows BMP, makes life simpler in cross-platform environments, and DXG/DWF file translation has been updated for version 14 of these AutoDesk formats.

But several dozen menu-item and feature-name changes scattered throughout the program can cause annoying moments of head-scratching for longtime MiniCAD users. Some features simply have new names; for example, MiniPascal—an unhip name these days—reappears here as VectorScript, with unaltered Pascal syntax.

Pumpin' VectorWorks excels at the quick construction of complex drawings, combining giant component libraries with scripting and convenient palettes.

Macworld's Buying Advice

Comparable to industry heavyweights (such as Bentley Systems' MicroStation) costing up to $4,000, the $795 VectorWorks is fast, compact, and the best value in professional CAD software for the Macintosh.—CHARLES SEITER

RATING: ♦♦♦♦ **PROS:** Libraries and tools for every CAD purpose; modest hardware demands. **CONS:** Requires some reorientation effort for MiniCAD users. **COMPANY:** Diehl Graphsoft (888/646-4223, www.diehlgraphsoft.com). **LIST PRICE:** $795 (direct price, $595; upgrade from MiniCAD, $195).

Pure Digital Visual Magic

Silicon Graphics 1600SW™ flat panel monitor

Digital Flat Panel Solution Pack for Macintosh

Number Nine Revolution® IV-FP Mac graphics card

The Ultimate Digital Flat Panel Solution Pack for Macintosh:

Silicon Graphics 1600SW flat panel features:

- Large 17.3 inch Silicon Graphics 1600SW Flat Panel (equivalent to 19" CRT Monitor)
- 1600 x 1024 pixel screen with 16.7M colors
- Unique SuperWide™ display lets you view two pages or applications side-by-side
- Light table image quality: up to 3X brighter than traditional CRTs and up to 5X the contrast
- .23 mm dot pitch (110 dpi) for laser sharp pictures, text and lines
- Ultra fast LCD pixel performance eliminates ghosting of moving graphics and video

Number Nine Revolution IV-FP card features:

- 32MB graphics memory (standard)
- Powered by Number Nine's 4th generation 128-bit *Ticket to Ride™ IV* processor
- Onboard graphics/text/3D texture cache
- Digital output for stunning image quality
- Hot 2D/3D with full-featured QuickDraw 3D & QuickTime acceleration
- Ultra-fast PCI configuration
- Advanced display utilities with color calibration & white balance adjustment

Only $2895 MSRP.

Unity DS-1

AUDIO SAMPLER IN SOFTWARE FORM

THE LINE BETWEEN COMPUTER and musical instrument is getting less distinct by the minute. Thanks to the increasingly powerful processors in today's computers—and the talents of a few software engineers—modern Macs can be transformed into musical machines. One such transformation is possible with the help of BitHeadz's Unity DS-1, a software-based digital sampler that—when given a fast CPU and heaps of RAM—is responsive enough to be used in live performances.

Mighty Multisample You can drag and drop SampleCell instruments directly into Unity DS-1's Multisample window.

Unlike analog synthesizers, which generate sounds with oscillators, samplers use recorded sounds as their building blocks. For example, the A-flat played by a trumpet can be recorded, digitized, loaded into a sampler's memory, and triggered by a MIDI keyboard. Most samplers can also alter the characteristics of a sound—change its attack, pitch, and harmonic makeup, for example.

Unity DS-1 is a remarkably complete sampling synthesizer that can do all this and more. But perhaps most noteworthy—for a software synthesizer, at least—is that when the program's various memory settings are configured properly on a fast Mac, Unity DS-1 plays with no noticeable delay. In addition, given enough memory and CPU horsepower, the sampler allows you to play up to 64 notes concurrently.

You can directly import Akai S1000, DLS, SoundFont 2.0, and SampleCell I and II instruments, with key and velocity maps intact. Just select an instrument file from a CD-ROM with SampleCell instruments, for example, and import or drag and drop it into Unity DS-1's Multisample page. In moments, the various samples that make up the instrument are mapped to the proper keys. You can also import single samples in Sound Designer I and II, AIFF, CD-Audio, and WAV formats.

Multisamples are assigned to one of two oscillators that act as your sound source. You can apply filters, modulation, and effects to these oscillators and then save these configurations as a program. You can layer or split two programs in Unity DS-1's MIDI Processor application.

But Unity DS-1 wants a *lot* of RAM—heed BitHeadz's recommendation that your Mac have 64MB or more. And although a 120MHz PowerPC is required, consider it a bare minimum. The program can squeak by with these configurations but is happiest on a fast 604e- or G3-based Mac.

Although Unity DS-1 comes with a passel of sounds, some of them are nothing to write home about. For example, those who have the RAM to spare will wish that BitHeadz had included a larger General MIDI bank—something BitHeadz claims to be developing as this issue goes to press. Also, now that BitHeadz has capably conquered the difficult problem of making a responsive software sampler, it should turn its attention to the program's interface. Many of Unity DS-1's elements are separate programs that would benefit from being ganged together into one or two applications.

Macworld's Buying Advice

Despite its cosmetic shortcomings, Unity DS-1 is a distinctive and flexible piece of software. If you're a musician with a fast, RAM-laden Mac who seeks an inexpensive alternative to hardware samplers—or you simply want to enhance your current MIDI setup with another instrument that can use your sample library—Unity DS-1 is well worth a listen.—CHRISTOPHER BREEN

RATING: ♦♦♦♦ **PROS:** Very responsive; compatible with most sample libraries. **CONS:** Included sounds are a little weak; interface needs work. **COMPANY:** BitHeadz (888/870-0070, www.bitheadz.com). **LIST PRICE:** $450.

electron24

24-INCH MONITOR'S WIDE ASPECT RATIO HAS PROS AND CONS

ARNOLD TIOSEJO

HOW MUCH IS A BIGGER MACINtosh desktop worth to you? Whereas a 21-inch monitor can display two pages side by side, LaCie's 24-inch electron24, with a maximum resolution of 1,920 by 1,200 pixels, gives you enough added room to open a column of palettes next to that spread (the viewable area is 22.5 inches). But you'd better need those extra pixels, because at any other resolution you're getting what amounts to a 21-inch monitor with a wide frame on each side.

When you hoist this 90-pound beast out of its packing crate, you'll immediately notice the wide aspect ratio—seemingly perfect for showing letterbox movies. The electron24 displays an image measuring nearly 19 by 12 inches, compared with 16 by 12 inches on a 21-inch monitor.

The unusual aspect ratio is a mixed blessing. To have the monitor display the maximum resolution of 1,920 by 1,200 pixels, you need to install iXMicro's ix3D Ultimate Rez graphics card (optionally included in the package). Unfortunately, the card doesn't support any other resolution appropriate for the monitor, such as 960 by 600 pixels. Instead, you get a standard selection of high-resolution display options that are more suitable for a 21-inch display. If you pick one of these resolutions, the picture appears stretched across the screen. You can use on-screen controls to scale the picture horizontally, but then you're left with a wide border on each side, defeating the purpose of a 24-inch display—and the extra $700 or so you shelled out for it.

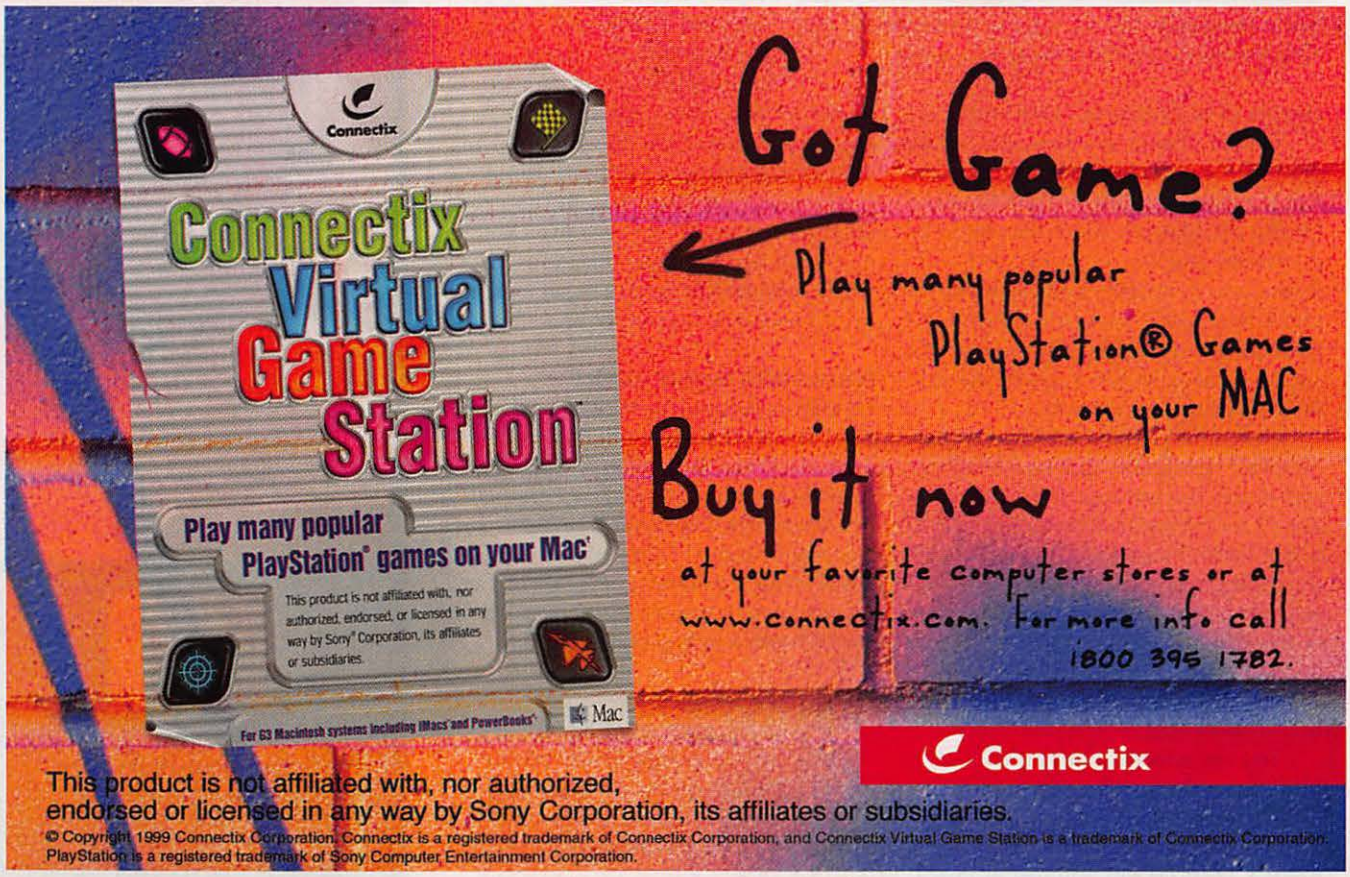

The electron24 uses a Sony Trinitron aperture-grille CRT, and image quality is good—but not great—compared with image quality of the best of the 21-inch monitors we've tested (see "Think Big," elsewhere in this issue). In Macworld Lab tests, the monitor received high marks for brightness and color reproduction but only average scores for sharpness. At the default resolution, 8-point text in one of our test documents looked a little blurry, but sharpness was otherwise acceptable.

A ten-button array on the front of the monitor lets you adjust color, picture size, positioning, and other settings. It's a convenient arrangement once you get the hang of it, but the buttons are so closely spaced that it's easy to hit the wrong one.

A plastic hood is included to block out ambient light. A nice touch, perhaps, but it doesn't do much to enhance the viewing experience.

Macworld's Buying Advice The electron24 costs upwards of $700 more than the 21-inch Apple Studio Display with ColorSync and Mitsubishi's Diamond Pro 2020u—*Macworld* Editors' Choice picks for best general-use 21-inch displays—and scored only average ratings for text sharpness. But if you really need those extra pixels, the image quality is more than adequate.—STEPHEN BEALE

RATING: ♦♦♦ **PROS:** Good color quality; wide aspect ratio. **CONS:** Expensive; limited resolution options. **COMPANY:** LaCie (503/844-4500, www.lacie.com). **COMPANY'S ESTIMATED PRICE:** $2,199; with Ultimate Rez, $2,459.

Action GoMac 2.0

CONVENIENT LAUNCHING TOOL DOES WINDOWS ONE BETTER

MANY MAC USERS ARE LOATH TO admit it, but Windows 95 and 98 include one navigation tool superior to anything found in the Mac OS—the Start menu and the accompanying task bar. Power On Software has evened the score by releasing Action GoMac 2.0, a navigation and launching utility that not only mimics but actually improves upon its Windows counterpart.

Action GoMac comprises four basic components—a Start menu for accessing recent items, bookmarks, Internet applications, commonly used applications such as those found in Microsoft Office, and the contents of drives attached to your Mac; a QuickLaunch area akin to Apple's Launcher; a task bar that lets you switch easily among open applications with a single mouse-click; and the Clock Tray, which contains a clock and pop-up calendar. A single, unobtrusive gray bar at the bottom of your Mac's screen contains these four components. From the GoMac control panel, you can choose to reveal this bar only when your cursor moves to the bottom of the screen, hide background applications, and configure GoMac's application-switching key combination.

GoMac Go! Action GoMac 2.0 offers quick access to often used items.

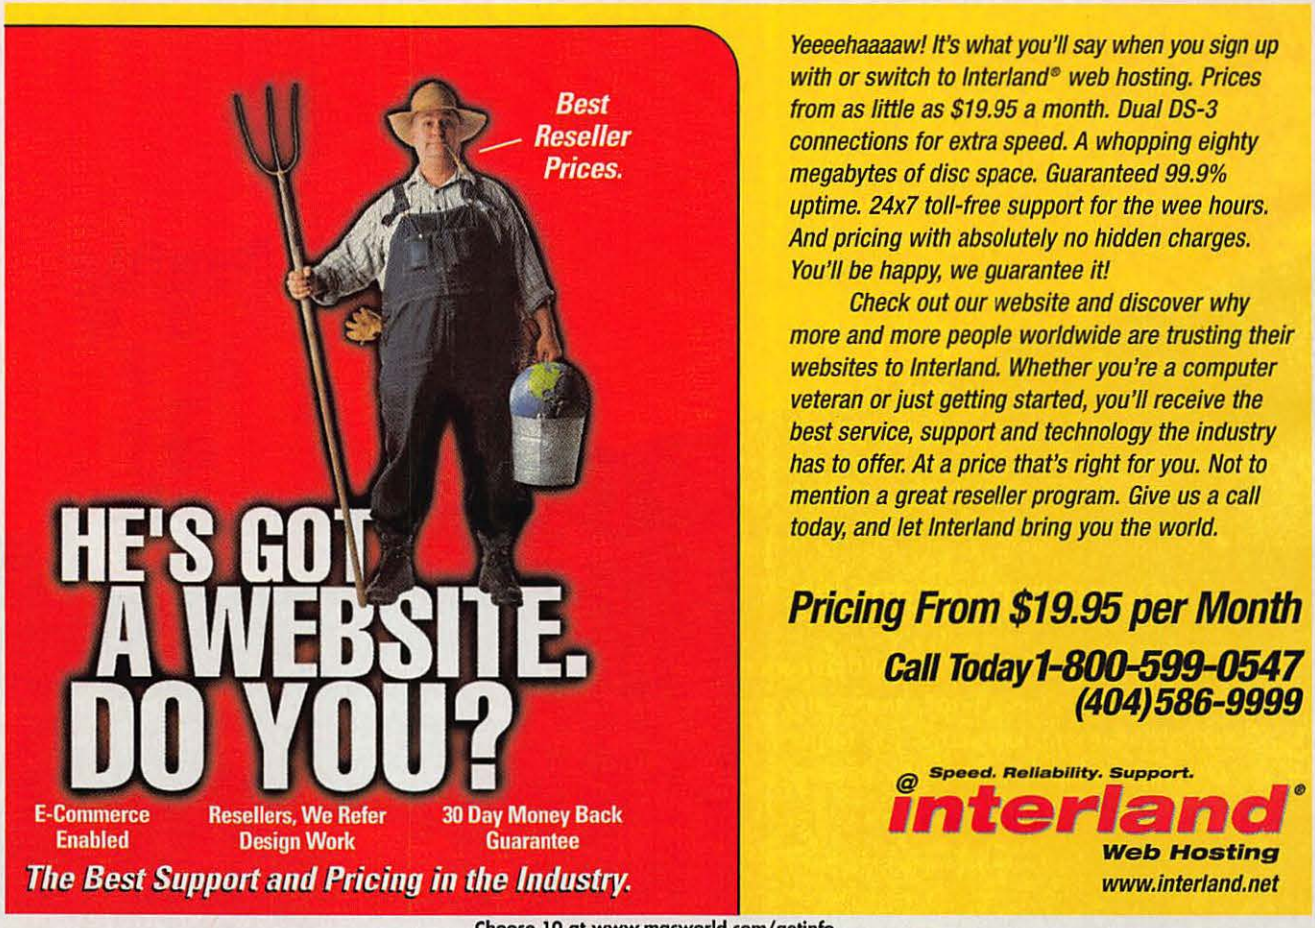

GoMac's drag-and-drop support is extensive. For example, to add an item to the Start menu or QuickLaunch, you simply drag its icon to either area. Removing items from QuickLaunch is simple—just click and hold on an item and then select the Remove command from the pop-up menu. Removing an item from the Start menu takes a few more steps; you have to select Start Menu Items from the Settings hierarchical menu and drag the item's alias out of the Start Menu Items window. We prefer Now Utilities' method of removing items—you simply highlight the item and remove it by pressing the delete key.

The task bar's pop-up menus are also helpful. For example, using these pop-up menus you can quit a background application without returning to it, produce the application's Get Info window, see how much memory the program uses, and add the program to the QuickLaunch area. Clicking and holding on the Finder button allows you to bring any open window to the fore—very convenient when open windows are stacked atop each other.

It's possible that some of these features sound familiar to you. After all, can't you do many of the same things with the Apple menu and Launcher or an advanced macro utility such as WestCode Software's One-Click? To a certain extent, yes. The difference is that Action GoMac is already configured and ready to go—no mucking about with folders, buttons, and scripts.

Macworld's Buying Advice Action GoMac 2.0 is one of those utilities you could probably manage to live without, but its convenience is hard to resist. Try the 30-day demo and see for yourself.—CHRISTOPHER BREEN

RATING: ♦♦♦♦ **PROS:** Convenient navigation features; extensive drag-and-drop support; easy windows management. **CONS:** Removing items from Start menu could be easier. **COMPANY:** Power On Software (800/344-9160, www.poweronsw.com). **LIST PRICE:** $40.

Any workstation can do graphics.
Only one is specifically designed to make you say,

It's alive!

Introducing our newest line of visual workstations. The operating system is Windows NT.® And the computer is pure Silicon Graphics.® Featuring our Integrated Visual Computing (IVC) architecture with the Cobalt™ graphics chipset, these breakthrough machines move graphics data six times faster than AGP 2X-based workstations*—a massive 3.2GB per second. Plus, I/O bandwidth is up to 12 times greater than other PC workstations.** Finally, you can get the outrageous 2D, 3D and digital media performance you expect from SGI—for about the price of a mere clone. The Silicon Graphics 320™ workstation with the Intel® Pentium® III processor starts at just $3,695. Or choose the Silicon Graphics 540™ workstation. Supporting up to four Intel® Pentium® III Xeon™ processors, it's the most scalable Windows NT workstation around. Either way, your computer will scream. And so will you.

VSE HTML Turbo 2.0

FLAWED WEB-PAGE OPTIMIZER

WE'VE ALL HEARD THAT TIME is money. On the Internet, however, disk space is both time *and* money. Larger files not only take longer to transmit to browsers but can also lead to additional charges from ISPs for taking up disk space and bandwidth. Voget Selbach Entertainment's VSE HTML Turbo 2.0 purports to optimize your HTML files, but bugs and design flaws prevent it from living up to its promise.

HTML Turbo does its job in three ways. First, it removes the spaces, carriage returns, and tabs that make files more readable to humans but that browsers don't care about. Second, it removes the attributes that WYSIWYG editors (such as Adobe GoLive) add but that aren't actually part of the HTML. Unfortunately, this internal list of unnecessary attributes is incomplete, and you can't add to it. Third, HTML Turbo helps browsers render pages faster by adding height and width attributes to images and closing slashes to URLs.

The program succeeds, to a certain extent: it rapidly shrunk our test sites 10 to 20 percent, doing a better job on files created with WYSIWYG editors than on those created by hand. But it also throws the baby out with the bathwater, deleting the contents of any external style sheets and JavaScript files (see "The Dog Ate My Web Site"). And it deletes all JavaScript comments unless you choose not to compress anything inside **<SCRIPT>** tags; this makes the program less useful for JavaScript-heavy sites.

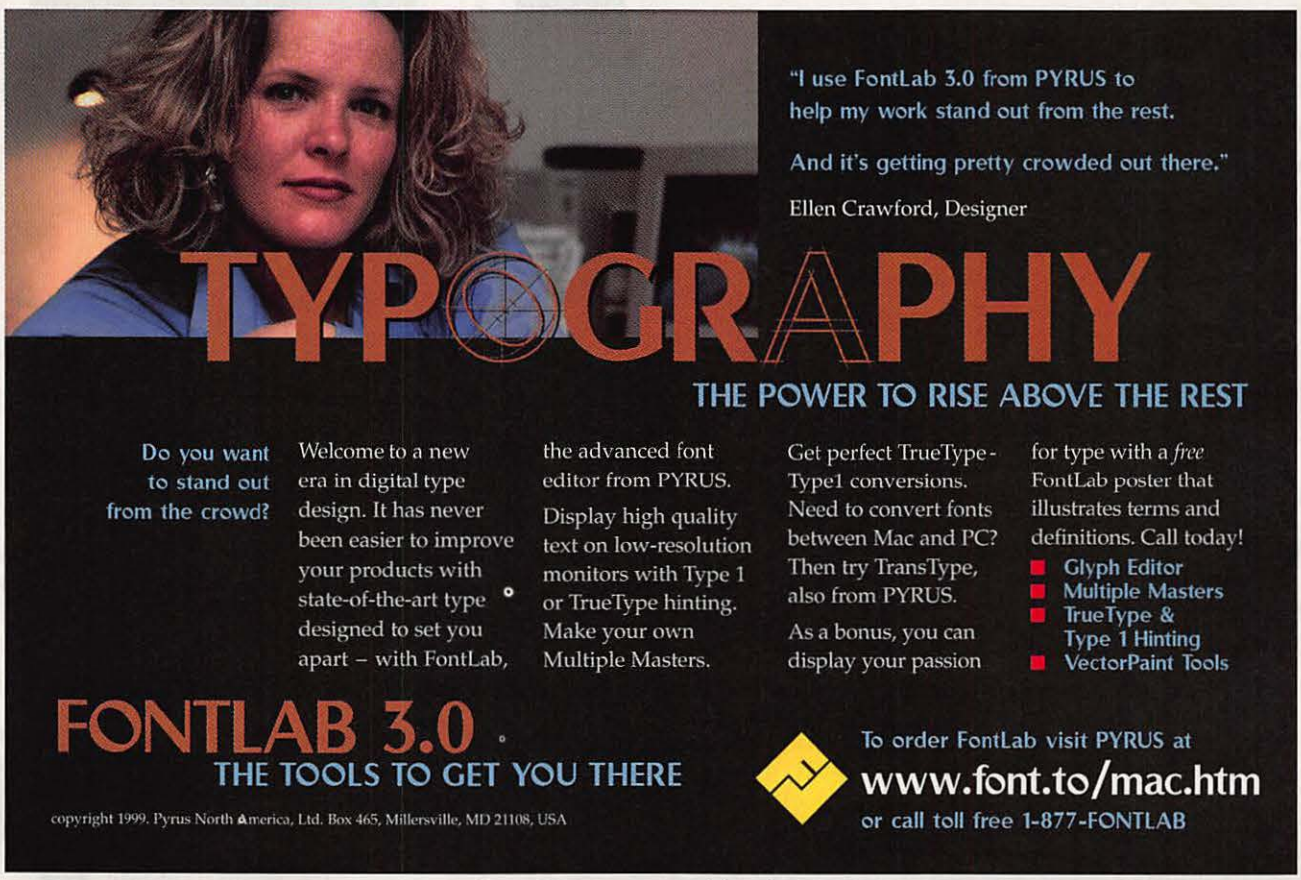

The Dog Ate My Web Site VSE HTML Turbo 2.0 tells you how much space it's saved, by file and by site. (But don't get excited about 100 percent optimization; it may mean your files are gone.)

Ironically, while developers of larger sites would be the most likely to benefit from HTML Turbo, they're also the ones who will have trouble incorporating it into their workflow process. For example, professional-level WYSIWYG tools let you do everything from editing pages to uploading your site to a server. With HTML Turbo, you create the site with your editor, run it through HTML Turbo, and then manually upload it to your server. That's a lot of overhead just to shrink the file by 10 percent. And because the program isn't scriptable, you can't add FTP functionality yourself.

Although Voget Selbach Entertainment is in Germany, its technical-support staff always answered my e-mailed questions within 24 hours. This is particularly helpful considering that the manual contains a number of errors and is difficult to understand.

Macworld's Buying Advice If your site is primarily text and you need to cut down on disk space and bandwidth, VSE HTML Turbo 2.0 might be worth checking out. For anyone else—particularly those who use JavaScript or style sheets—the results aren't worth the trouble.—DORI SMITH

RATING: ▮▮ **PROS:** Optimizes Web pages quickly; adds size attributes for images. **CONS:** Buggy; can't use on sites with external style sheets or JavaScript files; can't add to attributes list. **COMPANY:** Voget Selbach Entertainment (support@vse-online.com, www.vse-online.com). **LIST PRICE:** $50.

Printdesk 2.5

PRINT SERVER OFFERS EASY SETUP

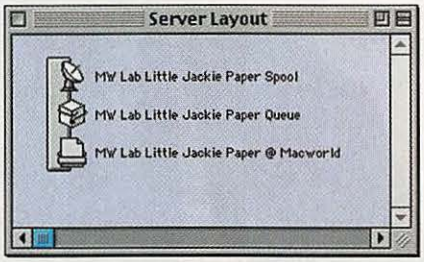

PUBLISHING PROFESSIONALS seeking a speedy way to spool their print jobs—without resorting to a Windows NT or Unix server—should look at Printdesk 2.5, an easy-to-use print server from Ultimate Technographics. Printdesk speeds printing operations by providing centralized print queues linked to specific output devices. Sending print jobs to the queue is generally much faster than sending them directly to the printer. Printdesk also goes beyond basic print-spooling functions by letting you manage jobs after they've been placed in the queue.

Installing Printdesk is straightforward, although you do need to plug in an ADB hardware lock. Because print spooling is not a hardware-intensive task, you can use a relatively old Power Mac as your server.

Once you've installed the program, setting up print queues is easy: you just choose a printer and name a queue, and you're all set. To print the job from a Mac client, you simply select a queue from the Chooser.

Ultimate claims that outputting your jobs via a Printdesk queue is up to 50 percent faster than printing directly to a PostScript device. However, we saw a relatively modest 30 percent speed boost when printing a 16-page QuarkXPress document—about the same speed improvement you'd get printing to an AppleShare server.

Printdesk distinguishes itself from a traditional server's print spooler by giving you many options for managing jobs after they're placed in the queue. For example, you can designate a portion of the server's hard drive to store jobs after they're printed. You can then redirect the job to a different output device—a useful productivity feature if you want to proof a job on an inexpensive printer before sending it to a more costly one. You can also modify toner density, screen frequencies, calibration, scaling, page orientation, and many other variables directly from Printdesk.

Queued Up Printdesk 2.5 makes it easy to set up custom print queues.

The interface, while not particularly difficult, has a few quirks. Some settings are changed under Options and others under Preferences, a seemingly arbitrary distinction. The Spool window, which shows the contents of each queue, lists jobs in the order received; we'd prefer that it list them in reverse order, because the most recent job is usually the one you're primarily interested in.

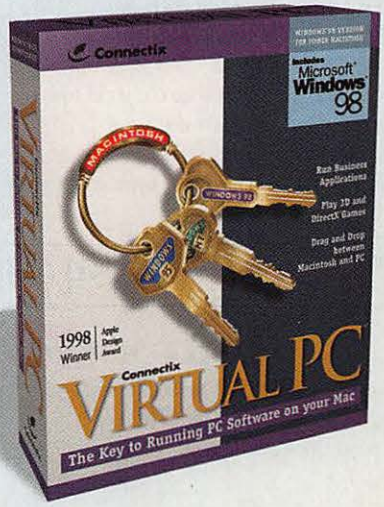

On the plus side, the central logbook, which shows the status of all current jobs, is easier to read than AppleShare's and also lists information you won't find in the AppleShare log, including physical page size, print-job duration, and job size.

Macworld's Buying Advice Printdesk 2.5 is a good value for small prepress firms or design shops that want to speed printing without hassling with a high-end server. The company also offers a $1,995 version that includes Open Prepress Interface (OPI) capabilities.—KEVIN MITCHELL

RATING: ♦♦♦½ **PROS:** Fast; easy setup; extensive printing options. **CONS:** Quirky interface. **COMPANY:** Ultimate Technographics (800/363-3590, www.ultimate-tech.com). **LIST PRICE:** $495.

APC
Legendary Reliability™

What does a digital photographer do in the middle of a lightning storm?

With APC battery backup power, he gets the picture. All the time.

Solutions starting at $99.

APC Back-UPS Pro®

Real Life

Dear APC: Bartlett Digital photography studio bills by the hour, which means we cannot tolerate avoidable downtime. The surge suppression and battery power of an APC UPS lets us finish the job, as scheduled, even with a temporary power outage.

- Tom Bartlett, central Florida

Fact

According to research by IBM, a typical computer is subject to more than 120 power problems a month. Surge protectors prevent only a fraction of the power problems that cause keyboard lock-ups, system crashes, corrupted data, and worst of all, motherboard burnout. An APC uninterruptible power supply (UPS) with surge suppression and battery back-up protects your software, hardware, and most importantly, your work. APC Back-UPS Pro® provides clean, reliable power that lets you function at peak performance, giving you time to shut down during a power outage. Getting the picture? Visit the listed retailers to add APC's Legendary Reliability to your system.

UGate II

INTERNET-ACCESS SERVER FALLS SHORT

GIBSON

ECONOMICAL INTERNET-ACCESS servers are all the rage for multiuser LAN Internet access and remote telecommuting, and several vendors have delivered products tailored to the needs of Mac users. Now Umax Technologies has entered the fray with the UGate II, a two-line shared-access server that offers both a shared Internet connection and dial-in telecommuter access. It lacks Mac-specific documentation, however, and doesn't support AppleTalk networking.

The package includes the modem-size UGate II server (which has a built-in four-port hub), a power supply, one Mac 8-pin DIN serial adapter, and a thin manual. You connect the modems and your Macs using your own cables; if you're using two Mac modems, you need a second DIN adapter. Web-based administration screens make configuration simple, and support for Dynamic Host Configuration Protocol (DHCP) and Network Address Translation lets you configure the TCP/IP settings for your hosted computers using a single dynamic IP address from your ISP. Alas, the installation instructions explain setup only for Windows users. The manual doesn't explain how Mac DHCP works, and getting the unit to assign an initial IP address automatically requires resetting the UGate to its factory defaults.

The UGate supports two modems or ISDN terminal adapters in tandem, for a combined Internet bandwidth of up to 230 Kbps (it reached 220 Kbps in our tests). However, because the UGate has only two serial ports, you have to cut that bandwidth in half to allow dial-in access. Virtually all competing shared Internet servers have three serial ports, letting you share aggregated bandwidth and telecommuting access simultaneously. And because the telecommuter feature supports only TCP/IP, dial-in users can't access AppleTalk-only servers on your LAN.

The UGate's on-demand Internet routing feature dials up your ISP when users need access, dialing the second modem to increase bandwidth as demand warrants. Alternatively, you can configure the UGate to dial both connections simultaneously for continuous high-speed bandwidth. The UGate also supports user-level access controls to let you restrict the use of some Internet capabilities. You organize users into security groups and then limit Internet access by protocol for each group.

Macworld's Buying Advice The UGate II is a tough sell in the Mac market. Competing products offer much more functionality, albeit at a slightly higher price, and are tailored for Mac users. If Umax bundled the proper cables, provided Mac-specific documentation and support, and addressed the needs of Mac telecommuters by adding AppleTalk support, the UGate II could be a contender.—MEL BECKMAN

RATING: ❚❚ **PROS:** Built-in hub; telecommuter dial-in; user-level access controls. **CONS:** No Mac documentation or support; no dial-in AppleTalk; only two serial ports; no cables supplied. **COMPANY:** Umax Technologies (800/562-0311, www.umax.com). **COMPANY'S ESTIMATED PRICE:** $300.

VST FireWire Hard Drives

They're fast, really fast

Data transfer rates are up to 400 Mbps. Plus the drive is FireWire Bus powered, so there is no need for an external power supply.

And small, really small

So lightweight and thin, they require virtually no desk space. You can take them with you wherever you go. So say good bye to big, clunky, external hard drives

We know you're interested, so come visit our web site to learn more.

PANTONE CREATIVE SERIES #4

Field Guide

NORTH AMERICAN DESIGNER

(*Graphicus nocturnis*)

Description:
5' to 6'4"; (100-300 lbs). Large eyed, nocturnal, clothes hip; thin skinned frequent chin scratching.

Habitat:
Art Openings, Dive Bars, Design Retrospectives, Awards Dinners, Art Supply Stores.

Comments:
Appears in muted tones, paradoxically attracted to colors. Highly unadaptable to design changes.

Life Cycle:

PANTONE ColorSuite® for Graphics is critical during all stages of development:

Hatching

Graphicus is highly threatened in the nascent concept stage; instinctively avoids color selection danger using the **PANTONE Color Survival Kit (PANTONE Color Formula Guide, PANTONE Process Color System® Guide** and **PANTONE Solid To Process Guide**) stored in belly pouch.

Courtship

Flamboyant plumage precedes the mating ritual. Shows off colors on-screen with **PANTONE ColorReady™** plug-in for QuarkXPress™, Adobe® Illustrator® or Macromedia® FreeHand®, to compare output of printer, proofer and on-press. Feathers nest with color palettes built in **ColorReady™**. Culminates in frenetic approval dance with client.

Reproduction

Reproduction insures the species' future. Note how the designer creates an accurate, predictable reproductive environment using **PANTONE Personal Color Calibrator™**, to match monitor and printer color output.

See *Graphicus* adapt to the predatory *Clientus unreasonabilis* at

species.pantone.com

or call 888-PANTONE, press 2, mention "FD"

BrainForest Professional

PALM-BASED OUTLINER COMES TO THE DESKTOP

OUTLINING IS NO LONGER reserved for writing school term papers; whether you're maintaining important lists of information or managing complex projects, hierarchical outlines offer a flexible structure for organizing everyday data. Aportis Technologies' BrainForest brought outlining capabilities to Palm devices, and now BrainForest Professional 1.0 brings them to the desktop. With the exception of some version 1.0 quirks, BrainForest Pro is a useful outliner, even for those who don't own a Palm.

BrainForest's name comes from the metaphor it uses to organize data: outlines are *trees*, which contain *branches* of items and subitems, ending with *leaves*, the deepest level of the hierarchy. Each branch or leaf exists as either a normal item or an action item; a check box indicates whether the item has been completed.

Beginners may think that they've missed the forest altogether when they first open the application. A new BrainForest tree is the essence of Macintosh minimalism: a blank window labeled Untitled. Although Aportis is deliberately echoing the Palm OS's sparse interface, a small tool bar or floating palette containing basic controls would be a welcome addition.

Outlining Isn't a Drag BrainForest Professional makes it easy to see where dragged items will end up.

You can use BrainForest outlines for scheduling by switching the tree's type from Standard to Project. The check boxes beside action items become bar indicators, measuring completion in percentages that you can change by clicking on them and selecting from a pop-up menu. You can assign start and end dates and a priority level, and specify the item as a repeating event or task.

BrainForest's approach to synchronizing data with the Palm is a bit awkward: instead of updating data on a record-by-record basis, as the built-in Palm applications do, BrainForest stores its files for installation when you perform the next HotSync operation. This method was the only one available to users of the original MacPac software, but given the open-conduit architecture of the current Palm Desktop 2.1, record-level synchronization should be a priority in the next release.

Macworld's Buying Advice If you already use BrainForest on a Palm, you'll appreciate being able to enter larger quantities of information by keyboard with BrainForest Professional. For those who don't own a Palm, BrainForest Pro offers an inexpensive outlining solution. When Aportis adds record-level synchronization and expands the minimalist interface, BrainForest Pro will be indispensable for keeping your life's data organized.—JEFF CARLSON

RATING: ♦♦♦♦ **PROS:** Flexible outline creation and editing; integrated project-management features. **CONS:** Sparse interface; no record-level synchronization. **COMPANY:** Aportis Technologies (888/276-7847, www.aportis.com). **LIST PRICE:** $40.

the duoscan for both sides of your business.

The Agfa DuoScan™ family of scanners make sharp, great-looking scans of reflective art and transparencies for your creative side. And clean, clear document scans for your administrative side. And all at a price that will pleasantly surprise both of you.

DuoScan & DuoScan T1200

DuoScan (left): TwinPlate technology, 1000(h) x 2000(v) dpi resolution, up to 9.5" x 12". DuoScan T1200 (right): same, except 600(h) x 1200(v) dpi and optional 10-page automatic document feeder.

DuoScan T2500 & DuoScan T2000 XL

DuoScan T2500 (left): TwinPlate technology with two scanning beds for reflective and transmissive art, DualLens™ optics, 2500(h) x 2500(v) dpi, 36-bit, up to 8" x 14". DuoScan T2000 XL (right): same as above, except 2000(h) x 2000(v) dpi and up to 12" x 18" size for reflective and 9.5" x 12" size for transmissive art.

Software

All come with Agfa FotoLook™ 3.0, to control image color and resolution, superior batch scanning and negative scanning, advanced descreening and sharpening tools, plus Agfa ColorTune™ color management software. The DuoScan T1200 also comes with OmniPage™ LE OCR software, plus Corel PhotoPaint™ 8.0.

The Game Room

Your Cheatin' Heart

FAVORITE GAME GOT YOU STUMPED? HERE'S HOW TO TAKE THE EASY WAY OUT.

by Christopher Breen

What is it about games that brings out the worst in people? Take my mother, for example. In most circumstances, Mom is as honest as the day is long. She's known throughout her community as a returner of dropped wallets and corrector of undercharging grocery clerks. But catch her playing solitaire, and you'll witness a ghastly transformation. The brow furrows; her soft brown eyes adopt a dark, foreboding hue; and from her mouth emerge phrases more appropriately found within the pages of *How to Speak Like a Merchant Marine in Ten Easy Lessons.*

As a veteran gamer, I naturally take this in stride. I understand that games can be vexing. What is far more troubling—and it pains me terribly to write these words—is the cheating. Heaven forbid that her 1040 form is off by a single penny, but find an ace of hearts that's inconveniently buried behind the jack of clubs and the seven of diamonds, and in the wink of a fairly sprightly eye that ace magically finds its way into the build pile with the jack and seven seemingly undisturbed.

"After all," she claims as she slips another one over on her invisible opponent, "it's only a game, dear."

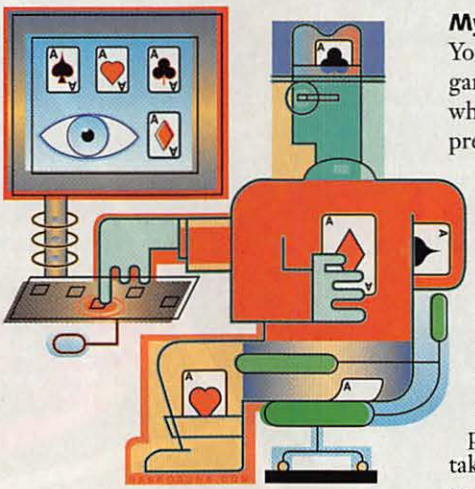

And so with these words I dedicate this, my first *Game Room* column, to my mother and all the other big, fat—and in point of fact my mother is quite slender—cheaters of the world. The following cheats are for those who can't stand to let a computer game get the better of them or those who—though virtuous in every other respect—simply lack the moral fiber to get the job done honestly.

The Sneaky Bits

Most people think that using a cheat code is the only way to earn a dishonest reward—and don't worry, we'll get to those in a bit—but first, there are some other methods for weaseling your way through games, as I outline below.

Diablo

Oh yes, you'll go straight to Hades for using this one, but what the hell, it's only your soul. You can duplicate items in your inventory by doing the following:

Drop the item to be duplicated and walk several paces away. Now click on the item, and just as your character picks it up, click on one of the eight items in your belt (that area of the screen where you keep potions and scrolls for easy access). If you've timed it correctly, the item you've selected in your belt will now "float" as it does when you've normally selected it, but the duplicated item's name appears in the description box. To collect your reward, drop the floating item. When dropped, it turns into the item you wished to duplicate. Of course, you lose the floating item for good when you do this, so don't click on a belt item you desperately need. Timing is crucial, and you'll find that you fail to duplicate items more often than you succeed. Once you succeed, however, you may find the means to afford the horrendously overpriced items Wirt has for sale.

Myth I and II

You can play any level of these two games by either pressing the spacebar when selecting New Game in Myth I or pressing the shift key when selecting New Game in Myth II.

Tomb Raider II

To skip to the next level, have Lara hold a flare, take one step forward and one step back, turn around fully three times, and then jump forward. To outfit Lara with the full complement of weapons, flares, and the like, place a flare in her hand and have her take one step forward and one step back, turn around fully three times, and then jump backward.

And finally, to get the comeuppance you and Mom so richly deserve for being the connivers that you are, perform either of the preceding without a flare in Lara's hand. That oughta teach you! m

Contributing Editor CHRISTOPHER BREEN is a coauthor of the *Macintosh Bible Guide to Games* (Peachpit Press, 1996).

HANK OSUNA

CHEAT CODES Ah, so the "Diablo do-si-do" was too much bother? You didn't care for Lara's final trick? Then turn the page, and cheat codes built into today's most popular Mac games will be revealed.

QUAKE

To enter a code, first press the tilde key (~) to bring down Quake's console. Type the code, press return, and again press the tilde key.

GOD Gives you invincibility.
FLY You levitate; use D to go up, C to go down.
SKILL*x* Change your skill level (x = 0 to 3) between missions.
NOTARGET You're invisible until you attack.
NOCLIP You can walk through walls.

ROCKY MOUNTAIN TROPHY HUNTER

More animals to kill. More ways to cheat. Note that many of these cheats will trigger a derisive comment and that any trophies you capture will be branded with the cheater label.

While hunting, type:

BGBARBECUE Provides you with a rocket launcher.
BGSNIPER Turns weapon wobble on and off.
BGWEATHER Switches weather on.

At the map view screen, type the following:

BGSHOW Shows the location of all the animals.
BGTRACK Moves you instantly to the location on the map.
BGURINE Attracts animals to you.
BGVAMPIRE Reveals blood trail in map view.

At the main menu screen, type the following:

BGBULLWINKLE Only moose appear.
BGELKABONG Only elk appear.
BGHORNS Only sheep appear.
BGYOGI Only bear appear.
BGNOAH Twice the number of animals appear.
BGSTEROIDS Bigger animals.

UNREAL

To enter a cheat, press the tilde key, type one of the following codes, and press enter to engage the cheat. Many of these cheats also work in Klingon Honor Guard.

ALLAMMO Provides 999 rounds for the weapons in your possession.
BEHINDVIEW 1 View your character from behind.
BEHINDVIEW 0 Return the view to first-person perspective.
FLUSH Get rid of screen artifacts.
GHOST Walk through walls.
GOD Gives you invulnerability.
OPEN *map name* Go to the map of your choice (enter name of map for ***map name***).
SUMMON Bring forth a weapon, item, or player. For example, SUMMON HEALTH provides you with a health power-up.
FLY Fly around.
WALK Turn off effect of FLY and GHOST.

Note: The FLY and WALK cheats work in the opening sequence of both Unreal and Klingon Honor Guard. Use the arrow keys to move in any direction you'd like. To return to the ground, use the WALK code.

MASTER OF ORION II

While viewing the Galaxy screen, press and hold the control key and type the following cheat codes:

BELL Displays races for diplomacy.
DAVINCI Gives or removes omniscience.
EDISON Gives you all technology.
GATES Provides the current technology.
INTEL The Antarans attack.
SCORE Displays your score.
TRUMP Showers you with 1,000 BC.

LODE RUNNER 2

During a single-player game, press the escape key and type **glazed donut** (with the space, and, yes, spell *doughnut* as *donut*). You'll hear a satisfying "Ha ha!" when you've done this properly.

Return to the game and enter the following codes:

F3 Go back one level.
F4 Go forward one level.
⌘-F12 Gain five lives.
⌘-8 Add ten bombs to each category.
⌘-K Beach ball power-up.
⌘-I Invisible power-up.
⌘-T Morph power-up.
⌘-B Cloak power-up.

Vimage CORPORATION

NEW MotionCam 350

USB Digital Camera

USB from A to Z

MAKE THE CONNECTION WITH THESE 201 ADD-ONS FOR YOUR COLORFUL NEW MAC

As the proud owner of an iMac or a blue-and-white Power Mac G3, chances are you've developed a sudden interest in USB (Universal Serial Bus). For good reason: USB is the primary means—for iMac owners, the *only* means—by which you connect peripherals to your new computer.

But where do you start? Where do you go to find the scanners, printers, storage devices, mice, trackballs, keyboards, joysticks—and all the rest—that will connect to, and work with, your new Mac? Where do you go to figure out which of your old devices you can still use if you get the appropriate adapters?

Right here. *Macworld*'s USB buyers' guide is the most comprehensive listing of Mac-compatible USB products you'll

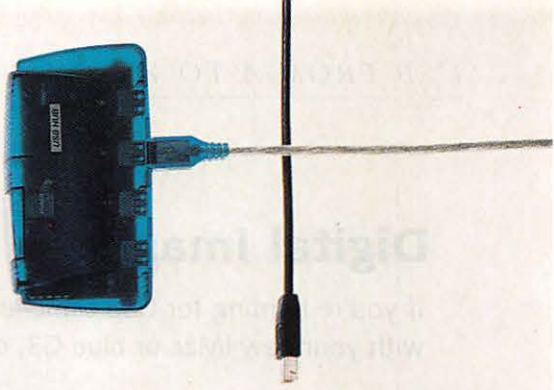

find anywhere. We've surfed the Web, roamed the aisles of trade shows, and contacted every computer manufacturer we could find to compile this master list of USB products—201 in all—so that you can enhance the productivity and fun factor of your Mac.

We didn't stop there. We brought dozens of these products into Macworld Lab and put them to the test. We poked and prodded, timed and tested to sort the wheat from the chaff. We found some winners you'll want to know about. And we uncovered a few losers as well, which you should probably avoid. You'll find our reviews spread throughout the pages of this all-inclusive guide.

So what are you waiting for? Your USB adventure begins on the very next page. Join us as we take you through USB from A to Z. **m**

Contributing Editor HENRY BORTMAN, with Senior Associate Editor ALLYSON BATES and Assistant Editor JONATHAN SEFF, compiled this list of USB products.

Improving Your Image

Kodak DC220 Zoom ♦♦♦½

Enhance your look with Kodak's megapixel DC220 Zoom. This USB-enabled camera bears an uncanny resemblance to Kodak's DC260 (♦♦♦♦; $899 list price; see "Megapixel Cameras," *Reviews,* February 1999). The DC220 offers a design and software bundle similar to its sibling's, and you can expect the same quality of images as well.

The main differences between the two models are their maximum image resolutions and zoom capabilities. The USB DC220 is capable of a maximum image resolution of only 1,152 by 824 pixels (just under 1 million pixels), and its optical zoom is limited to 2×.

Although $699 is a bit pricey, the DC220 is currently the least expensive USB camera. The USB connection eliminates having to fuss with a CompactFlash card for transferring images to your Mac.—HENRY BORTMAN

See-Through Printer

Epson Stylus Color 740i ♦♦♦♦

Why settle for a plain-vanilla ink-jet printer when you can have one that looks like an iMac? Epson's new Stylus Color 740i is functionally identical to the Stylus Color 740 (see *Reviews,* January 1999), but sports an iMac-inspired color scheme, complete with see-through colored plastic.

As you watch the gears turn, the versatile four-color printer produces great-looking text and graphics, including photos. Like its sibling, the 740i features built-in serial and parallel ports in addition to USB. Its case is blueberry, but for $15 you can order a cover that matches any of the other four iMac flavors.

Priced at $249—after a $30 Epson rebate—the Stylus Color 740i also features an unusual software bundle, including Polaroid PhotoMax Pro, ArcSoft PhotoPrinter, and ArcSoft PhotoBase. For $8, you can also choose 2 additional Mac titles from a list of 11, including Virex and Print Shop Deluxe.—STEPHEN BEALE

Trackball Traction

Itac Mouse-Trak evolution ▮▮▮

Itac's Mouse-Trak evolution may be pretty to look at, but it's not very easy to use.

The contoured design of the Mouse-Trak fits nicely in your hand and provides excellent wrist support. The trackball is easy to control, but its six programmable buttons are not. You can't program the buttons' functions through a control panel. Instead, you must program the functions with the buttons themselves—a very arcane process with only confusing documentation as an aid.

Worse, there is no way to program the equivalent of a control-click, which means you can't use contextual menus without having to reach for the keyboard. Furthermore, double-click–dragging (to select a block of text word by word) is an uncomfortable operation.—HENRY BORTMAN

Game Pads—Command Your Controller

Ariston Hermes ♦♦♦½
Gravis GamePad Pro USB ♦♦♦♦
ThrustMaster Fusion Digital Game Pad ♦♦♦

Arcade gamers will be stoked to find that USB game pads have made the move to the Mac. Since game pads are traditionally bundled with console gaming systems, Ariston's Hermes, Gravis's GamePad Pro, and ThrustMaster's Fusion work best with arcade-style adventures.

The ThrustMaster and Ariston pads, modeled on Nintendo game pads, feature an eight-way directional pad; A, B, C and X, Y, Z buttons; and two "flipper" buttons at the back of the pad. The ThrustMaster game pad also carries two additional buttons in the middle of the controller (akin to the Select and Start buttons on Sony PlayStation controllers). Also, the two buttons underneath the pad make it awkward to operate. If you're accustomed to using Nintendo-style game pads, you'll be happier with the Ariston Hermes.

The Gravis GamePad Pro mimics a PlayStation controller, with an eight-way directional pad to the left of the controller, four buttons to the right, two center buttons, and four "flipper" buttons at the back. Unlike PlayStation controllers, however, the GamePad Pro includes a screw-in joystick handle for the directional pad. Because this game pad looks and feels like a PlayStation controller, it's a natural winner for those playing PlayStation games with Connectix's Virtual Game Station.—CHRISTOPHER BREEN

Clockwise from top: ThrustMaster Fusion Digital Game Pad, Ariston Hermes, Gravis GamePad Pro USB.

Joysticks—Playing the Games

Ariston Ares ♦♦♦½
Saitek Cyborg 3D USB Stick ♦♦♦♦

Unlike game devices of the past, the Ariston Ares and Saitek Cyborg 3D USB joysticks work only with those games that support Apple's Input Sprockets software technology. Although this means you won't have to muck about with proprietary control panels, it does mean you won't be able to use these sticks to play older games that don't support Input Sprockets.

Both joysticks feature a four-way hat switch, throttle control, and numerous other buttons—the Ares has eight; the Cyborg 3D, ten. The Ares also has a wheel you can use for rudder or pivoting control. The Cyborg 3D—much like Microsoft's ADB SideWinder 3D Pro—uses a twisting handle for these functions.

The Ares joystick is intended for right-handed users only, whereas you can configure the Cyborg 3D for left-handed users as well. The Cyborg's ambidextrous capabilities mean many buttons are placed—somewhat inconveniently—at the back and middle of the joystick. Although the Ares's controls are more accessible, the stick itself isn't easier to use. We recommend the Cyborg 3D. It's more solidly built, and both the throttle control and the stick are smooth as silk.—CHRISTOPHER BREEN

Rodent Replacement

Contour Design USB UniMouse ♦♦♦
Interex USB-SM ♦♦♦♦½
Logitech MouseMan Wheel ♦♦♦♦
Logitech USB Wheel Mouse ♦♦♦½
Macally iMouse ♦♦

It's only a matter of time before Apple's circular, translucent USB mouse drives you crazy. Fortunately, USB replacement mice are available in abundance.

Logitech offers two programmable mice equipped with convenient scrolling wheels that let you automate tasks: the MouseMan Wheel and the traditionally shaped three-button USB Wheel Mouse. The $50 MouseMan Wheel is oddly shaped but extremely comfortable. It's designed to naturally fit your *right* hand, however, so lefties are out of luck.

Both mice perform well, with one exception: moving a window so that the scroll bar is off-screen or the window displays across two monitors disables the scroll wheel.

Interex's three-button, programmable USB-SM—an excellent deal at $30—also has one button that doubles as a scrolling wheel, allowing continuous scrolling. (The translucent model is available for an extra $10.)

Be forewarned: you may have to download the Mac drivers for these mice. Both Logitech and Interex plan to provide Mac and PC drivers on CD, but in the rush to market, both companies began shipping USB mice to Mac users with PC drivers only—on floppy disks, of all things!

For color-conscious users, Contour Design's USB UniMouse is the first input device to be available in all five iCandy colors. Although these three-button mice are programmable, they lack the intuitive control panel found with Logitech and Interex pointing devices. For each different combination of button functions, you have to install a separate driver in your System Folder (and remove any other existing UniMouse drivers you may have previously installed).

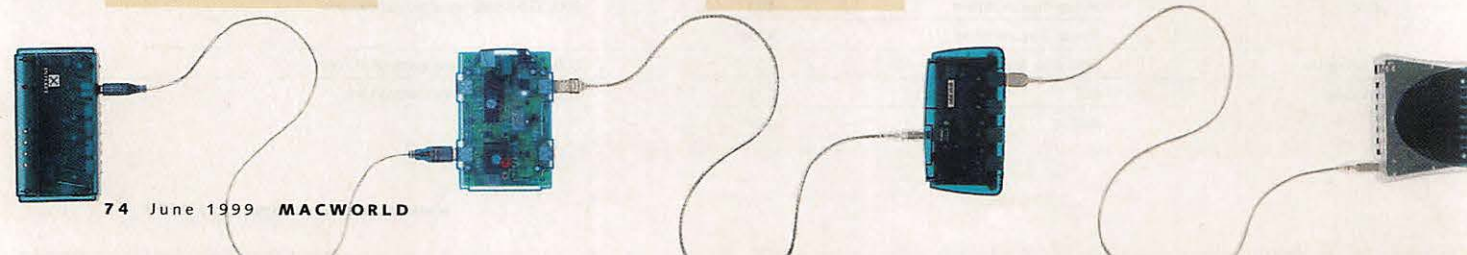

Macally's iMouse—a single-button, nonprogrammable replacement for the round, bundled Apple mouse—is a no-frills, colorful pointing device that's overpriced at $39. Our advice: invest in a mouse with more functionality for the same amount of money.—HENRY BORTMAN

Serial Salvation

Keyspan USB Serial Adapter ♦♦♦♦

Who said only furry felines have nine lives? Thanks to manufacturers such as Keyspan, you can save orphaned serial devices, such as printers and modems.

The Keyspan USB Serial Adapter is a converter cable that plugs into a USB hub and provides two serial ports. The easy-to-use Keyspan adapter functions well and supports a wide range of devices, including select models of Apple StyleWriter and Hewlett-Packard DeskJet printers and all Epson printer models; Kodak, Olympus, and Nikon digital cameras; the 3Com Palm Pilot and Palm III; and all brands of standard external modems.

But there are restrictions. "Externally clocked" serial devices—those that control the data-transfer rate to the computer—are not supported, nor are LocalTalk devices.—HENRY BORTMAN

Filling the Floppy-Disk Void

iDrives iFloppy-USB ♦♦½
Imation SuperDisk USB Drive ♦♦♦♦
Newer Technology uDrive ♦♦♦½
VST Technologies USB Floppy Drive ♦♦½

If you're the owner of a bright and shiny iMac or a flashy new G3, you may need to consider buying an external floppy drive. Although the occasions to use a floppy are somewhat rare, what would happen if you needed to read a file from (or write one to) a floppy disk?

The iDrives iFloppy-USB, the VST USB Floppy Drive, the Newer Technology uDrive, and the Imation SuperDisk USB Drive solve this dilemma. The first three drives cost around $100 and are the standard floppy-disk drives you've seen on Macs of the past. The $150 Imation SuperDisk reads and writes floppy disks, but it can also read and write proprietary 120MB removable SuperDisk cartridges.

In our tests, all four drives worked for the simple reading and writing of files—although only the Imation drive autoejects floppy disks. For the other drives, dragging a floppy icon to the Trash won't eject the disk; you'll have to press the eject button.

The VST and iDrives devices were unable to install software from a set of multiple floppy disks, but the Newer and Imation drives performed this task without any problem. The iDrives and VST were also the slowest at mounting disks and copying files. The SuperDisk was the fastest at copying files, and the Newer uDrive was also speedy. The uDrive mounted a floppy in record time, beating the SuperDisk.

If you need a floppy drive, your best choice is Imation's SuperDisk. Its support for 120MB cartridges is adequate backup for your hard disk. Of the three standard floppy drives, we recommend the Newer uDrive for its speed and its ability to handle multidisk software installations.—HENRY BORTMAN

Think Surf.

Finally, A Cross-Platform Multi-User Internet Connection

Thinking of upgrading your home or business with a local network? Do multiple users need to get on the Internet at the same time?

Then you better think about the new FriendlyNET™ Dual 56K Internet Connection from Asanté Technologies.

It's fast. It's easier to set up than anything on the market. It fits right on your desk. And it comes from the leader in small-office/home-office networking.

Access blazing-fast bandwidth for yourself or share it among multiple users without the cost of additional Internet accounts. Connect a second phone line for 112Kbps of uninterrupted Internet access—eight times faster than standard 28.8Kbps modems. You can even use your existing fax line without worrying about missed calls.

With browser-based software, plug-and-play design and cross-platform compatibility, you can have your whole office networked and everyone online within minutes. It's that simple.

Or, you could pay more for something else and struggle trying to make it work. The choice is yours. The answer is clear. FriendlyNET—Speed, Simplicity, Savings.

For complete details on the entire line of Asanté networking solutions call 1-800-303-0283.

Macworld Lab Tests 21-Inch Monitors

BY STEPHEN BEALE AND MICHAEL GOWAN

It happens every time you open that spreadsheet. You're boosting capital investments in column B, but you have to scroll to column Z to see the long-term payback. You try zooming out, but the numbers shrink into unreadable specks of gray. . . .

You need a bigger monitor.

Graphic artists have long recognized the benefits of large-screen displays, which let you view your work in its full dimensions, with all your tools and palettes conveniently arranged. But with the average price of a 21-inch monitor now at about $1,200, these monitors aren't just the domain of designers anymore.

To help sort out your options, Macworld Lab examined 29 general-use 21-inch monitors, ranging in price from about $750 to $1,900 (see the table, "The Big Picture," for details about each model). Our panel of experts put the monitors through their paces, testing for display quality and ease of operation. We used objective and subjective tests to evaluate such factors as brightness, sharpness, and color display (see the benchmark, "The Eyes Have It"). We learned that while there are some bargains to be had, the best-looking 21-inch displays for general use will set you back at least $1,500.

Never fear, we didn't forget the designers among us, either: see the sidebar, "Think Accurate," for *Macworld*'s evaluation of four color-calibrated monitors for graphics pros, and check the table for their ratings.

The Basics

Before you begin your quest for the perfect monitor, here are a few pointers.

Tube Type The monitors we tested all use cathode-ray tubes (CRTs), still the most common technology for desktop displays. CRTs create images on the screen by using a gun to shoot a beam of electrons at red, green, and blue phosphors painted on the back of the screen, thus creating the range of colors you see on the screen.

CRTs come in two types: *shadow mask* and *aperture grille*. Each uses a different technology to direct the electron beams to the phosphors. A shadow-mask monitor aligns the beams of electrons as they pass through a sheet of metal riddled with a honeycomb of tiny holes. Aperture-grille monitors (which are often labeled with brand names such as Sony Trinitron or Mitsubishi DiamondTron) align the beams using an array of thin wires.

So what does that mean to you? Monitors that use shadow-mask technology are more common and often less expensive, but they can also offer poorer-quality images. Typically, fewer electrons are able to pass through the shadow-mask structure than through an aperture-grille one, which can mean a dimmer and less focused image. Manufacturers of aperture-grille monitors claim that their technology offers sharper images and richer colors. Overall, we found this to be true.

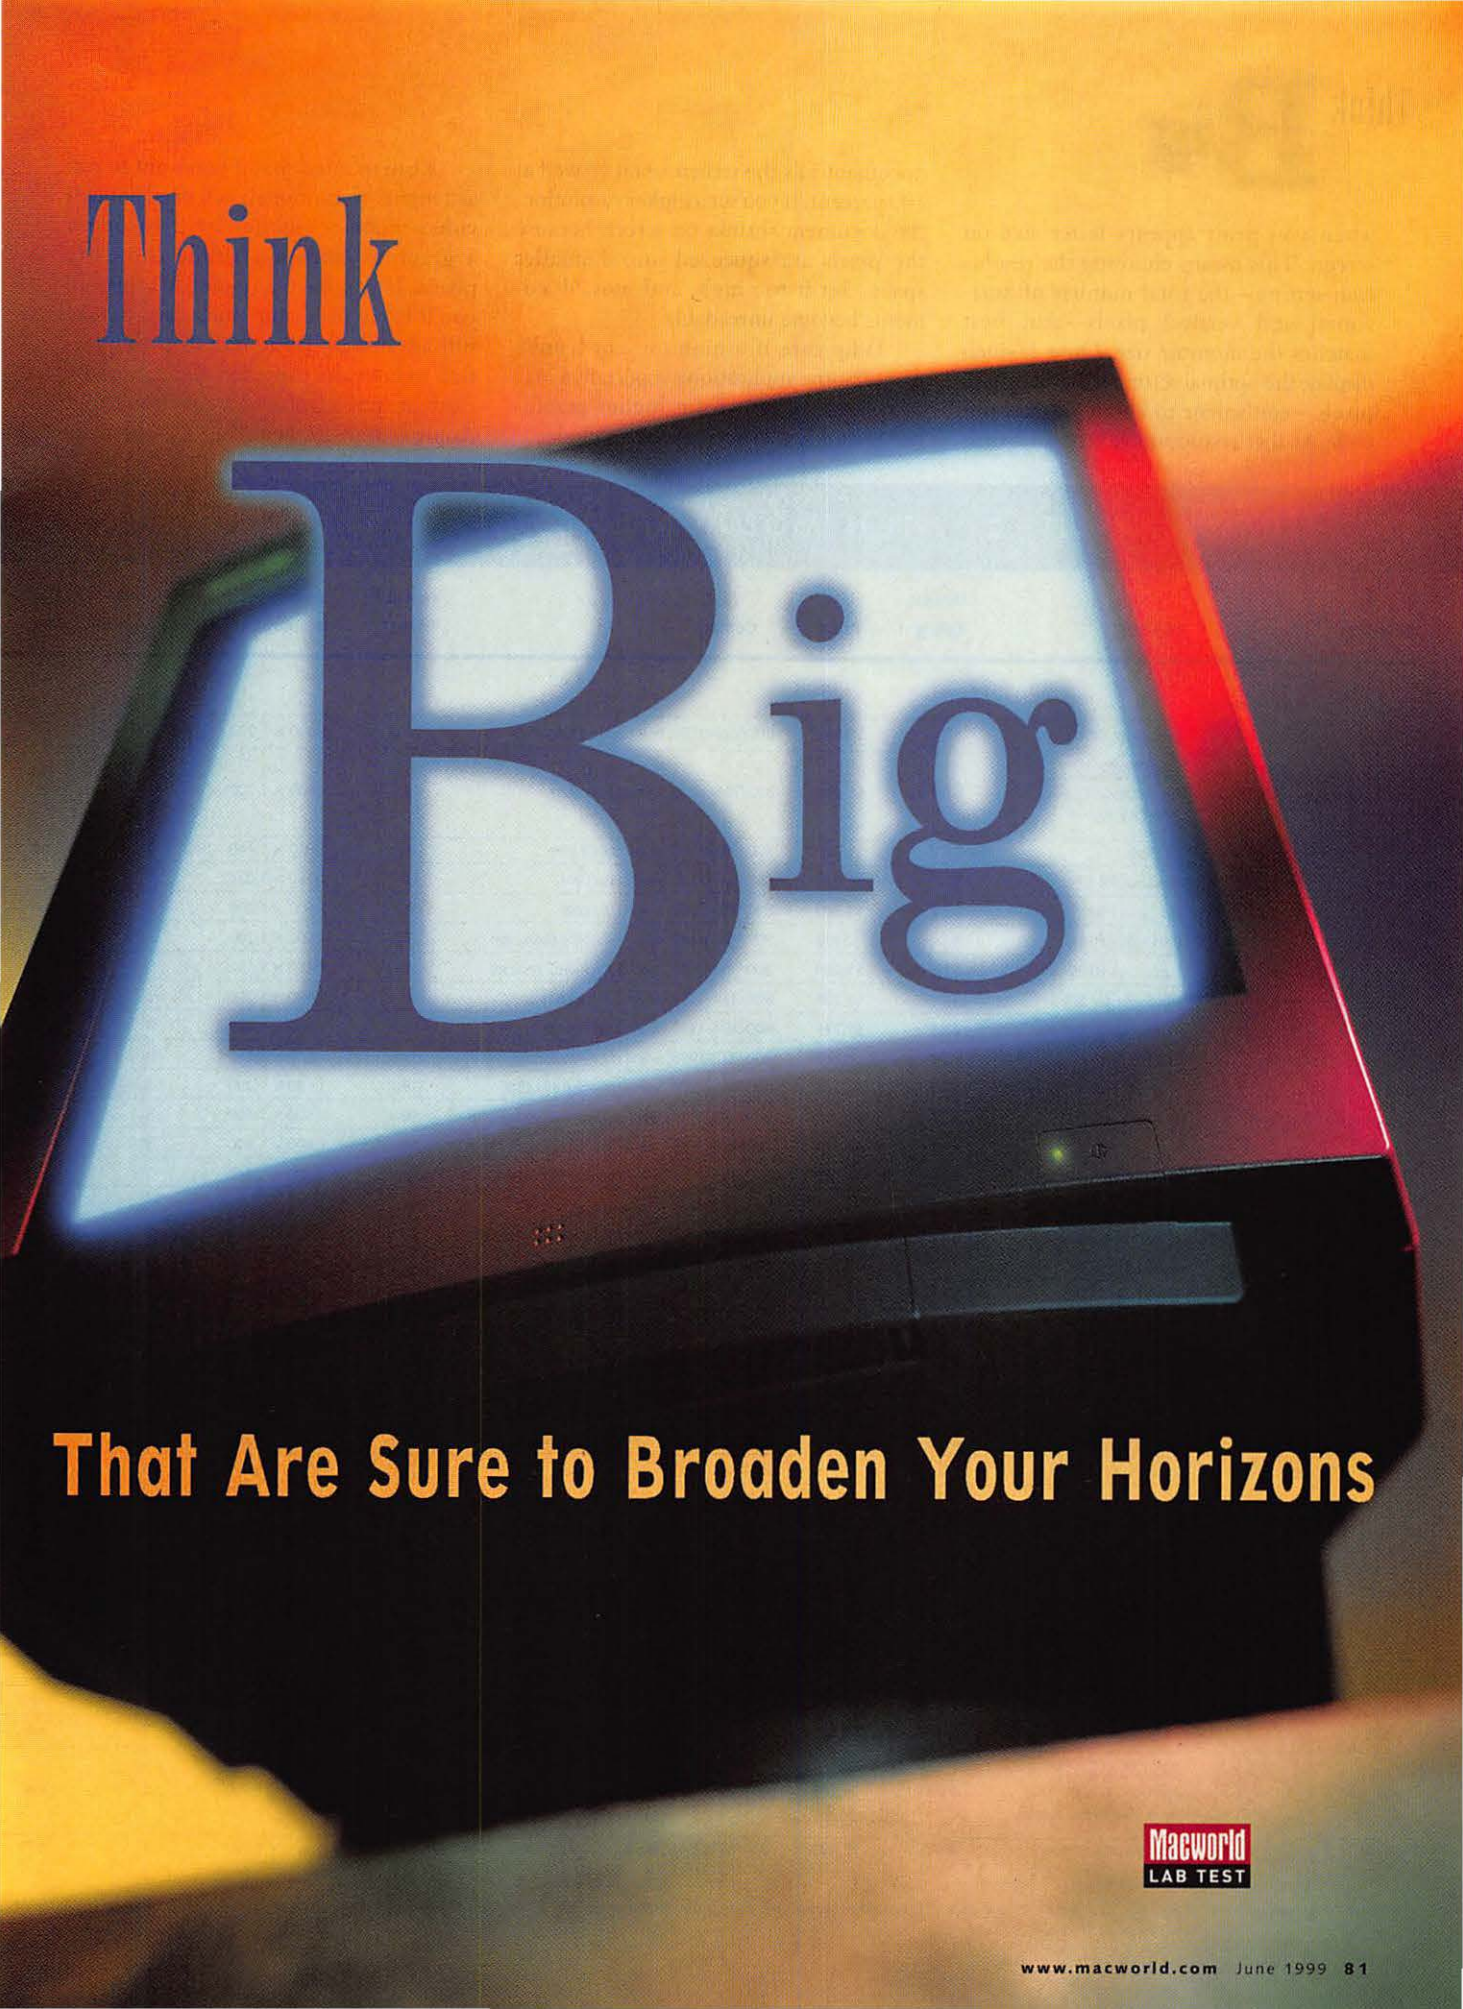

Flat Screens In the past, CRTs have always had a slightly curved screen, which can introduce subtle image distortions especially annoying to people working with exact shapes and measurements, such as CAD users. This year a few of our monitors—including Sony's GDM-F500; NEC's MultiSync FP1350; and one of our Editors' Choice winners, Mitsubishi's Diamond Pro 2020u—features an innovation: the flat-screen CRT. Because it removes the subtle distortion caused by a curved surface, a flat screen typically gives you a better-looking image and is also less prone to glare. In most cases, we found that the flat screen did improve image quality.

Resolution When you read the spec sheets for 21-inch monitors, it's easy to be impressed by the number of pixels they can display, but what does this really mean?

In most applications you'll want to view images and text at close to their actual dimensions, so a page that will be letter-size

PHOTOGRAPHS BY SCOTT PETERSON

Think Big

That Are Sure to Broaden Your Horizons

Macworld LAB TEST

Think Big

when you print appears letter-size on screen. This means choosing the resolution setting—the total number of horizontal and vertical pixels—that best matches the monitor size. On a 21-inch display, the optimal setting is 1,152 by 870 pixels—equivalent to about 72 dots per inch. At that resolution, a 16-by-12-inch document fills the screen when viewed at 100 percent. If you set a higher resolution, the document shrinks on screen because the pixels are squeezed into a smaller space. Set it too high, and most documents become unreadable.

Why care if a monitor can handle more? Some applications, especially CAD programs, benefit from higher resolutions. Besides, it's nice to have a choice.

Keep in mind that if you want to run at a higher resolution, you'll need enough video memory—either built-in or on a graphics card—to handle the extra pixels. If you have an older Macintosh, you'll likely need a graphics card to take full advantage of the monitor. In addition to boosting the video memory, these cards include graphics-acceleration chips. Apple's new Power Mac G3 systems

[A] Measured diagonally, in inches. [B] In pixels. [C] For parts, CRT, and labor. [D] Evaluated as both a general-use and professional monitor. [E] Two-year CRT warranty. [F] Documentation recommends a maximum resolution of

include built-in graphics acceleration.

Refresh Rates When you spend hours staring at a computer screen, nothing is more annoying—or likely to induce headaches and eyestrain—than flickering. When a screen flickers, it means the electrons are not illuminating the phosphors quickly enough to fool your eyes—there's a tiny pause as the screen refreshes. The speed at which the electrons paint the screen is known as the *refresh rate*. To prevent screen flickering, you need a refresh rate of at least 66Hz. Most monitors offer a range of refresh rates that vary depending on the screen resolution. In our general testing, we set all the monitors at a 75Hz refresh rate, with a resolution of 1,152 by 870. All offer higher rates if necessary, although their maximum refresh rates do vary.

Comments
Acceptable quality overall, marred by stubborn moiré effects and poor controls. Very good warranty.
Excellent overall quality and a reasonable price; a great companion for new Power Mac G3s. Older Macs can't access on-screen controls. Worst warranty. For pro use: accurate hue, but too much contrast.
Acceptable overall quality, but with somewhat washed-out colors. Dimmest monitor.
Acceptable sharpness and color. Dimmer than recommended.
Acceptable color quality and sharpness, although reversed type blurry.
Acceptable overall quality, although with a slight color cast. Very bright monitor. VGA connection only.
Acceptable overall quality. Control buttons are not intuitive. Brightest monitor. VGA connection only.
General image quality acceptable, but at high resolution, the text became unreadable and image appeared to vibrate.
Acceptable overall quality. Good price for monitor with this maximum resolution.
Good bargain monitor with acceptable overall quality. Some moiré problems. Good warranty. Outstanding controls.
Acceptable sharpness and color quality. Bright monitor.
Acceptable overall quality. Good warranty.
Acceptable color quality and sharpness, but reversed type somewhat blurry. Good warranty.
Acceptable color quality and good text sharpness, but reversed text somewhat blurry. Good warranty.
Excellent sharpness, acceptable color quality, a flat screen. USB hub allows two computers to share monitor and devices.
Acceptable sharpness and color quality with slightly washed-out colors. Good warranty. Flat screen.
Acceptable color quality and good text sharpness. Good warranty.
Acceptable sharpness and color quality, although colors slightly washed out. Good warranty.
Acceptable color quality, but poor sharpness with blurry text. Good warranty.
Excellent sharpness and acceptable color quality. Good warranty.
Acceptable overall quality. Good warranty.
Acceptable sharpness and color quality. Flat screen. Good price for high resolution. Mediocre warranty.
Acceptable overall quality. Good price for high resolution, although reversed text was blurry. Good warranty.
Acceptable overall quality, but flesh tones slightly washed out. Good warranty.
Acceptable overall quality. At high resolutions, reversed text blurry. Bright monitor.
Excellent sharpness and color quality, but at a high price. Flat screen.
Acceptable color quality, but poor sharpness, with blurry text. Good warranty. Includes special speaker system.
Acceptable overall quality. Highest possible resolution, but with high price.
Excellent color quality, and acceptable sharpness. Good warranty.
Accurate, easy-to-use monitor, but expensive.
The ultimate in color accuracy, but at a very high price. Colorimeter attached to unit.
Accurate color quality at a bargain price. Good warranty. Built-in USB hub allows two computers to share monitor and devices.
Color not very accurate. Good warranty. Optional USB hub allows two computers to share monitor and devices.

1,280 by 1,024, although we found higher-resolution quality acceptable. [G] Estimated street price. [H] One-year CRT warranty.

Massive Monitors Compared

A monitor that looks top-of-the-line on paper can still show blurry images or faded colors when you sit down in front of it. The best way to evaluate monitors is to do your own side-by-side comparisons, so that's what our panel of experts did.

Macworld Lab lined up 33 monitors (our 29 general-use monitors as well as the 4 non-Apple professional monitors discussed in "Think Accurate") for in-depth examination. Covering the windows in the lab to eliminate extraneous outside light, we scrutinized test images designed to showcase the monitors' color quality and ability to display sharp text and graphics. We also evaluated each monitor's brightness.

A Sharper Image Whether you're crunching numbers or laying out pages in QuarkXPress, you want text and other items to appear sharp. Displayed information is always sharper in the middle of the screen and tends to get blurrier toward the edges, so our experts examined a Microsoft Excel 98 worksheet that contained normal and reversed text both in the middle and at the edges.

Overall, we found all the monitors to offer acceptable sharpness, but a few stood out as exceptional. The $1,499 Apple Studio Display with ColorSync displayed crisp text across the entire screen. The $1,499 Mitsubishi Diamond Pro 2020u also scored high for uniform sharpness. The $1,900 Sony GDM-F500 did very well with normal text, although it showed somewhat fuzzy reversed text.

On the low end of acceptable, Eizo's $1,399 FlexScan T960 and Mitsubishi's $1,349 Diamond Pro 1000e and $1,499 Diamond Pro 1010e had problems displaying reversed text, but not enough to render it illegible. The jury did find some monitors' sharpness unacceptable, however. Panasonic's $999 PanaSync E110 showed blurry, hard-to-read text, especially at the edges of the screen. ViewSonic's $1,149 MB110 also suffered from overly blurry text.

When we tested the monitors at a higher resolution—1,600 by 1,200—iiyama's $1,239 VisionMaster 502, Sony's $1,049 CPD-520GS, and ViewSonic's MB110 were the only monitors that displayed unacceptably fuzzy and unreadable text. At this resolution, Princeton's $999 Princeton EO2010 showed blurry reversed type, but not to an extent that the jury found unacceptable. One note: Eizo's

continues

Think Accurate: 5 Pro Monitors Show Their Stuff

GRAPHICS PROFESSIONALS generally want the same things from a monitor as anyone else: big or little, it should be sharp and free of distortions and shouldn't take a degree in rocket science to set up. But while most users will happily settle for a pleasing display, graphics pros who make critical color decisions need a monitor that displays color consistently and *accurately.*

Monitor accuracy isn't just a luxury anymore.

LaCie's blue eye calibrator

Direct-to-plate printing and color-management–savvy applications such as Adobe Photoshop 5 and QuarkXPress 4 have helped soft proofing (using the monitor to judge color and tone) become, if not a replacement for, then certainly a very useful adjunct to conventional hard-copy proofing. Even in situations where you're still making film and Matchprints, a well-calibrated monitor can save you from going through the multiple iterations of corrections and proofing that are commonplace in high-end prepress work.

To find out just how accurate a monitor can be, Macworld Lab tested five 21-inch models for color accuracy: the $1,499 Apple Studio Display with ColorSync, the $4,295 Barco Personal Calibrator Plus, the $6,990 Barco Reference Calibrator Plus, the $1,849 LaCie electron21/108 with blue eye calibrator, and the $3,499 Mitsubishi SpectraView 1000. We performed two sets of tests, one subjective and the other objective, to see which monitor matched colors the best.

We had hoped to include the new miro PressView XL display (miro acquired the rights to Radius's monitor line late last year). Unfortunately, no final units were available for testing. Based on past experience, we expect the PressView XL to be a serious contender. Look for an upcoming review.

How Calibration Works

Making a monitor display color accurately is as much a function of the software as it is the hardware. The main thing we ask of the hardware is that it behave consistently; that's where calibration comes in. Simply put, when you *calibrate* a monitor, you're setting it to a known state. The critical parameters are *color temperature* (usually measured in kelvins), which specifies the color of white; *white luminance* (usually measured in candelas/m² or footlamberts), which defines the brightness of white; *black level,* which specifies the brightness of black; and *gamma,* which expresses the overall contrast.

To display images in a consistent way, you need to calibrate the monitor to a *known* set of values for color temperature, gamma, white luminance, and black level. This will ensure that the monitor produces the same results over time. You also need a way of recording these settings, along with the color of your monitor's phosphors, in a ColorSync profile so that applications such as Photoshop 5 and QuarkXPress 4 can send the proper signals to make the color come out right on your particular monitor.

What Makes These Monitors Special

There are third-party packages that allow you to calibrate any monitor, but the five monitors we looked at come with proprietary calibration tools that offer a significant advantage over those third-party packages.

The reason? Third-party calibrators set the color temperature by changing values in a lookup table in the video card. The video lookup table contains 256 entries for each channel, corresponding to the 256 possible shades of red, green, and blue the monitor can display. The calibrators simply turn off some of these shades to arrive at the desired color temperature, which means that you lose some brightness and the monitor produces somewhat fewer than the 256 possible shades of red, green, and blue.

Instead of simply turning things down in the video card, these monitors each use a serial connection between the monitor and the host Mac that lets the calibration software apply gains in the voltage amplifiers that drive the monitor's guns. This lets the displays achieve the target color temperature without sacrificing brightness or levels.

The Serial Situation

Note that the Apple Studio Display is the only professional monitor configured to connect to the USB port in the new G3 Macs. In fact, right now it will work *only* with the new, blue Power Mac G3s. The other four monitors all require a serial port, so if you want to use one of these with the new Macs, you'll need a USB-to-serial adapter. We used Keyspan's (510/222-0131, www.keyspan.com) $79 USB Serial Adapter.

With the exception of the Apple display, our professional monitors also allow you to set a specific luminance level for both white and black, which most third-party calibrators won't do. This means that you won't overwork the monitor and will always return it to exactly the same state when you recalibrate.

Pro Monitors Compared

Calibration is, after all, about getting what you see on screen to match what you see on paper. With this in mind, Macworld Lab ran two separate color-fidelity tests to figure out which of our professional monitors did the best job.

Mitsubishi's bundled calibrator

First we went for the objective facts. We created a series of color swatches in CIELAB (a perceptually based, device-independent color space), displayed these in Photoshop, and measured the color displayed on each monitor with a Photo Research PR-703A spectroradiometer. We then compared these results with the values in the CIELAB file to see if they were the same.

Our second test addressed the subjective nature of color matching. No matter how good your equipment, it's impossible to measure *all* the colors in a nat-

ural image; in any case, what's usually most important is preserving the overall relationship between the image's colors. We asked a panel of experts, skilled in evaluating color, to judge how well a printed image on a properly lit Matchprint compared to the same image displayed on screen in Photoshop 5.

Mitsubishi SpectraView 1000 The SpectraView 1000 was the least accurate monitor in our objective test. This information was confirmed in our subjective testing. Our panel felt that it had an overall bluish-green cast, and this was borne out by the measured data. The monitor did, however, track gray levels quite well. The default calibration set the white luminance noticeably higher than any of the other monitors, which may cause the monitor to wear out more quickly. In the end, all this, combined with a price of $3,499, made us find the SpectraView disappointing.

Apple Studio Display with ColorSync Unlike the other monitors, the Apple Studio Display does not use a separate instrument to measure the light produced by the monitor. Instead, it keeps tabs on the beam current and uses an embedded processor to track phosphor aging. This innovative approach is less expensive and simpler than actually having to measure the light produced by the monitor with an instrument, but it's also probably less accurate.

In our objective tests, the Apple Studio Display reproduced hues—the property of colors that we refer to when we use a color name such as "red"—quite accurately. However, it had fairly large errors in tonal values, the lightness or darkness of the colors. A 25 percent gray, for example, was much too dark.

Our jury characterized the monitor's color quality as inviting but suffering from too much contrast, with loss of detail in both the highlight and the shadow areas. The Apple monitor—one of our Editors' Choice winners for *general use*—offers convenient

Barco's Personal Calibrator Plus measuring device

calibration at a comparatively low price, but we do not recommend using it for critical image-editing tasks.

Barco Reference Calibrator Plus At $6,990, the Reference Calibrator Plus was the most expensive monitor under consideration. According to our objective tests, it was also the most accurate by far, with an average error of just one delta-e CIELAB. (One delta-e is generally reckoned to be the smallest perceptible color difference—six delta-e is usually accepted as a good commercial match in printing.)

Our jury felt that the contrast was a little flat, but it's quite likely that the jury was biased by looking at the other monitors simultaneously: the higher contrast of the LaCie was more appealing, for instance, but probably didn't match the print as accurately. The jury deemed the Barco's color rendition, sharpness, and detail excellent.

We also liked Barco's CalibratorTalk software. It offers very simple, one-button calibration (with every user-definable override you could conceivably want). The calibration instrument is stored in the monitor housing and is matched to the individual monitor at the factory. This provides unparalleled accuracy and makes it very hard to lose the instrument. (Of course, it also means you can't use the device with your other monitors.) All in all, if you want the Rolls-Royce of monitors, this is it—but it comes with a Rolls-Royce price tag.

Barco Personal Calibrator Plus The less expensive alternative is Barco's Personal Calibrator Plus. It was the second-most-accurate monitor in our objective test, slightly ahead of the LaCie. One of our jurors felt that the monitor had a slight bluish cast and that it displayed a little less highlight detail than the Reference Calibrator Plus, but the jury generally rated it highly.

The Personal Calibrator Plus comes with the same CalibratorTalk software as its more expensive sibling and includes a simple measuring puck from Sequel Instruments. CalibratorTalk supports other instruments, too, and discussions with a Barco representative suggest that using CalibratorTalk with a better instrument—such as the $495 X-RiteColor DTP92 Monitor Optimizer, from X-Rite (888/826-3059, www.x-rite.com)—could improve accuracy.

LaCie electron21/108 with blue eye calibrator Although we liked the Personal Calibrator Plus, which costs $2,695 less than the Reference Calibrator Plus, at a mere $1,849 LaCie's electron21/108 was the *clear* price/performance winner in this group.

The electron21/108 displayed slightly more hue error in our objective tests than did the Apple monitor, but it tracked gray values much more accurately, particularly in the shadows. Our jury preferred it over all the other monitors for overall contrast and color, perhaps in part because of its flat screen. Our only real complaint about the electron21/108 is its dark-blue plastic casing, which introduces extraneous color that can skew the viewer's perception.

LaCie's software is particularly elegant, with one-button calibration and intuitive control over all monitor settings. The only thing the software doesn't do is automatically set the ColorSync profile it creates as the System Profile. Overall, however, this monitor is a deal. It wins on price, performance, and ease of use.

Macworld's Buying Advice

If you want the absolute best and don't mind paying for it, Barco's Reference Calibrator Plus is state-of-the-art. The Personal Calibrator Plus comes in a close second. However, if you're concerned about money, as most of us are, LaCie's electron21/108 with blue eye calibrator delivers very impressive performance at a hitherto undreamed-of price.

One thing to note is that the Barco monitors' target luminance is quite a bit lower than that of the LaCie monitor. This means that to get the full benefit of the Barco calibration, you need to use those monitors in a very low ambient-light setting. The CalibratorTalk software does allow you to choose a higher target brightness, but doing so will shorten the life of the display. The electron21/108's greater brightness makes it more tolerant of higher ambient light. You really can't go very wrong with any of our top three monitors. Your color will be more predictable, you'll save money by eliminating multiple iterations of proofing, and you'll have far fewer surprises at print time.

Contributing Editor BRUCE FRASER is a coauthor of *Real World Photoshop 5* (Peachpit Press, 1999).

Best Professional Display

★★★★½ **LaCie electron21/108 with blue eye calibrator** This inexpensive calibrated monitor offers impressive color accuracy and ease of use. **Company:** LaCie (503/844-4500, www.lacie.com). **List price:** $1,849.

REAL PRODUCTS REAL RATINGS

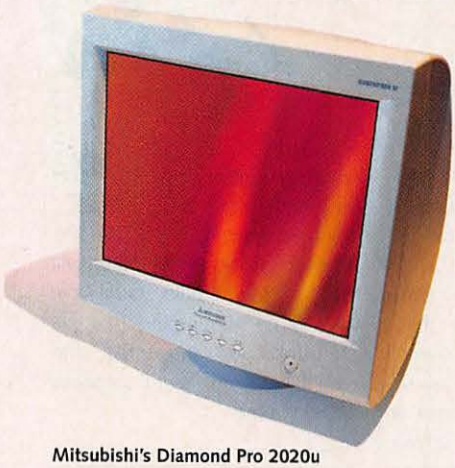

Reviews you can trust *Macworld* rates only final shipping products, not prototypes. What we review is what you can actually buy.

Think Big

continued from page 83

$1,399 FlexScan FX-E7S documentation recommends using a maximum resolution of 1,280 by 1,024 with this monitor. However, we found that the monitor's quality did not suffer when resolution was set to 1,600 by 1,200.

The Right Color While these monitors are not intended for color proofing (see "Think Accurate"), colors should still be rich and realistic. If you're shopping for sweaters on the Web, after all, you want to know if that cardigan is actually green or turquoise. To test the monitors' color-display capabilities, our experts examined an Adobe Photoshop image that included the hardest things to get right: an array of primary colors, flesh tones, and solid blacks.

Mitsubishi's Diamond Pro 2020u

Two of the monitors that scored best on sharpness—the Apple Studio Display and the Sony GDM-F500—also led the pack in color reproduction, with accurate colors, realistic flesh tones, and dark blacks. ViewSonic's $1,295 PT813 also excelled, with rich colors and dark blacks, although it did show poor contrast between areas of similar color.

None of the monitors drew an unacceptable rating for color reproduction, but some did have quirks. CTX's $1,285 EX1300, Optiquest's $1,049 V115, Samsung's $1,179 SyncMaster 1000s, and NEC's $1,099 MultiSync P1250+ suffered from somewhat faded, washed-out colors. Hitachi's $999 RasterOps 8115 showed a slight color cast.

Bright Subjects Some monitors are brighter than others, a factor that comes into play if you work in a well-lit environment. Under fluorescent lights, a monitor projecting about 20 to 23 footlamberts—the standard measurement for brightness—is sufficient for most people. In a less ideal setting you may need a brighter display. For example, if you sit by a window, a bright monitor will be able to compensate for the direct light.

To test brightness, we cranked up each monitor's contrast to the maximum level and adjusted the brightness control to ensure consistent results. We then measured luminance, using a Minolta color analyzer.

Hitachi's $1,229 RasterOps 8135 and the aforementioned RasterOps 8115

Macworld LAB TEST

The Eyes Have It

Rich, realistic colors. Crisp, sharp text. Would you expect less from the monitor you stare at day after day? Our panel of experts examined 29 big monitors for just these qualities, but only a few stood out from a generally acceptable crowd. The Apple Studio Display with ColorSync and the Sony GDM-F500 were the only monitors to get top scores for *both* color quality and sharpness. The Mitsubishi Diamond Pro 2020u and the Panasonic PanaSync S110 scored high for sharpness (the most essential quality for text), but their color quality was flatter. Brightness scores above 20 footlamberts are best.

Best results in red.

Behind Our Tests

To test the image quality, Macworld Lab used a jury of three experts. Monitors were connected to iXMicro ix3D Pro Rez display cards and set to a resolution of 1,152 by 870 for general image-quality testing and 1,600 by 1,200 for the High-Resolution Sharpness test. The jury examined test images from Adobe Photoshop and Microsoft Excel and tested display brightness using a Minolta TV-2150 color analyzer. Brightness was measured at the optimally adjusted brightness and contrast settings.—**Macworld Lab testing supervised by Jeffy K. Milstead**

stood out as the brightest monitors, measuring 30.7 and 29.1 footlamberts, respectively. Sony's CPD-520GS and miro's $1,249 Radius Precision View XL-1 came in a close third, producing 28.5 footlamberts. Only a few monitors fell notably below the ideal range for brightness, including CTX's EX1300 at 18.0 footlamberts, Eizo's FlexScan FX-E7S at 18.4 footlamberts, and Panasonic's $1,399 PanaSync/Pro P110 at 19.1 footlamberts.

Moiré Display If you see an annoying wavy distortion on your screen, especially when viewing intricate detail, it may be a *moiré effect*, which is often caused by interference from patterns that are close to the same frequency as the monitor's dot pitch.

In our testing, several of the shadow-mask CRTs displayed moiré effects. In almost all cases, these distortions disappeared when we tweaked on-screen moiré controls. However, even after taking this step, we were unable to get rid of noticeable distortions (visible even in solid colors) in ADI's $850 MicroScan 6G. To a much lesser extent, Mag InnoVision's $747 DJ920 also suffered from some subtle but stubborn distortion.

Keeping Things under Control

Even if annoying moiré effects aren't a problem, you'll probably want to experiment with monitor settings to get the picture most pleasing to your eye. All of the monitors we evaluated sported easy-access brightness and contrast controls along with on-screen menu systems that let you adjust horizontal and vertical scaling, panning, and other settings you may need to modify from time to time. Not all menu systems are created equal, however.

The Mag InnoVision DJ920 and the $999 Philips Brilliance 201B use intuitive circular controls to help you navigate the menu system. Most of the other models employ a four-button method—one for menu, navigate right, navigate left, and exit—which we also found easy to use. ADI's MicroScan 6G had the least intuitive controls. This monitor sports a whopping 14 buttons, not including the power switch, which means it's a lot easier to inadvertently change the wrong settings.

A Control Conundrum The Apple Studio Display's controls are almost entirely on screen; the monitor uses software-based on-screen controls that require a USB connection between the monitor and computer. As a result, Apple has certified the display to work *only with the new, blue Power Mac G3s*, which include built-in USB ports.

We tried connecting the monitor to an early Power Mac G3 using a USB PCI card, but the software controls failed to work. In theory, you should be able to use the monitor with any Power Mac, but be forewarned: without on-screen controls, you'll be limited to adjusting only brightness and contrast.

USB Flexibility The Apple Studio Display's unusual USB setup may reduce its flexibility, but some of the displays in our roundup offer built-in (or optional) USB hubs that *expand* their flexibility.

We were particularly impressed by Mitsubishi's USB hub, which is a $79 option for most of the company's monitors but is built into the Diamond Pro 2020u. Unlike other companies' hubs, Mitsubishi's allows you to hook up *two* computers to your monitor. This means the computers can share a keyboard, pointing device, and other USB peripherals—a rare convenience, especially for people who use both a Mac and a PC.

Macworld's Buying Advice

Two monitors displayed overall quality that made them stand out from the pack: the Apple Studio Display and the Sony GDM-F500. Both these monitors offer excellent sharpness as well as rich, saturated, and accurate color that is noticeably a step above the rest. The GDM-F500 has a better warranty than the Apple monitor, has a flat screen, and works with any Mac, but it also costs $400 more. For this reason, the Apple Studio Display is our Editors' Choice for people who own, or are about to buy, a new blue Apple G3.

If you own an older Mac, we recommend Mitsubishi's Diamond Pro 2020u. This monitor is priced identically to the Apple Studio Display and offers superb sharpness, a flat screen, and acceptable—if not excellent—color quality. The unusual flexibility offered by the Diamond Pro's special USB hub also helped us give it the nod as our second Editors' Choice. If color quality is paramount and money is no object, the Sony GDM-F500 is also a solid choice.

Get ready to stretch out and open that spreadsheet. You'll see it all—your 30-year business plan from column A through column Z. So now how does it all add up? **m**

Compared with glare-prone curved screens (right), the new flat screens (left) generally do improve image quality.

Macworld's Senior Editor/News and Reviews STEPHEN BEALE covers the graphics and imaging beats. Assistant Editor MICHAEL GOWAN wouldn't mind having a bigger monitor one bit.

EDITORS' CHOICE

Best Display for New Macs

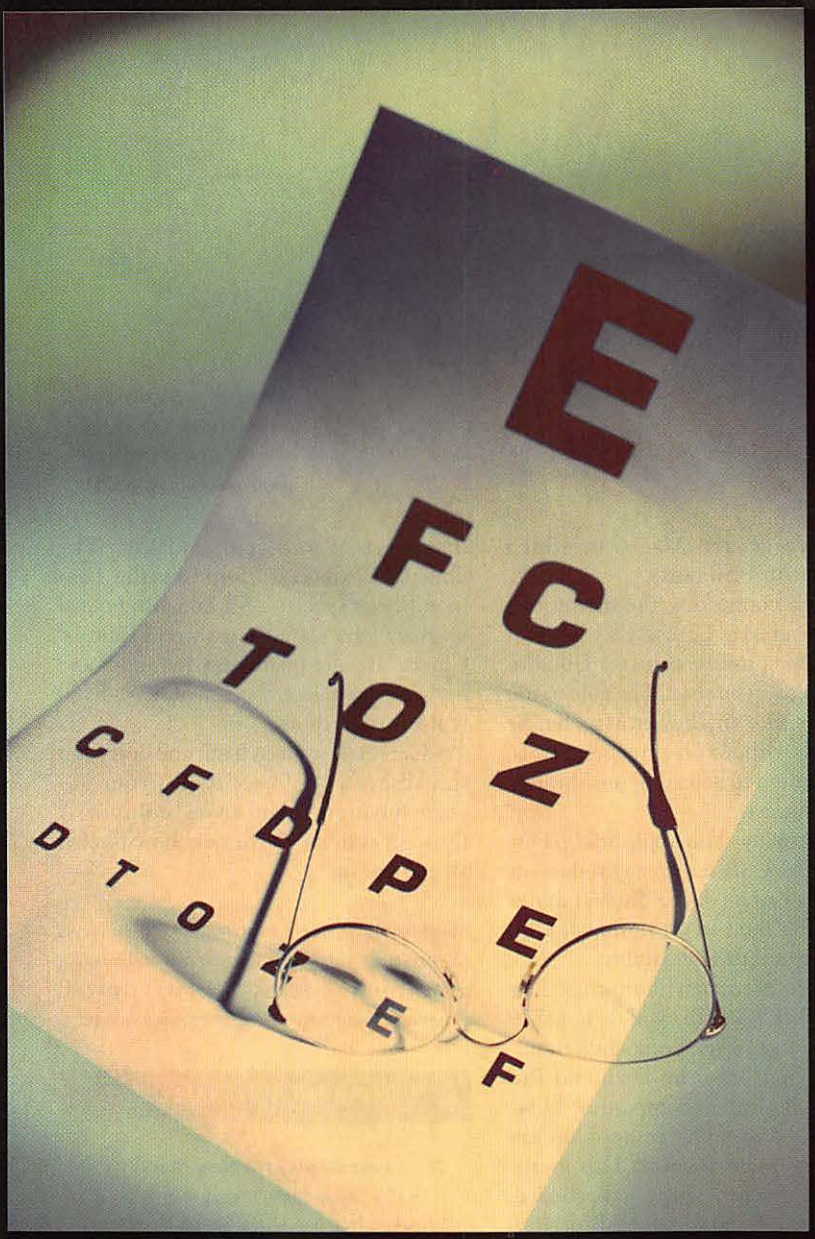

Apple Studio Display with ColorSync This reasonably priced monitor offers outstanding overall quality, but it works fully only with new Apple G3s and has a less-than-ideal warranty. **Company:** Apple Computer (800/795-1000, www.apple.com). **List price:** $1,499.

Best Display for Older Macs

Mitsubishi Diamond Pro 2020u This monitor offers excellent sharpness; a flat, glare-free screen; and acceptable color quality. Its special USB hub also makes it ideal if you use two computers. **Company:** Mitsubishi Display Products (800/843-2515, www.mitsubishi-display.com). **List price:** $1,499.

WEB MERCHANT'S COMPANION

Everything You Need to Know BEFORE You Set Up Shop Online

If you own a business, the seductive call of online profits has become nearly irresistible. You just *know* you'll be able to increase sales and boost profits if you can only sell your products to the zillions of hungry consumers out there on the Internet. If you're a Web-site designer, hardly a day goes by when you're not asked to help a client get online.

But is setting up shop online *always* a good idea? And what are the hurdles to getting into the electronic marketplace? To answer these questions, you'll need to know more about electronic commerce, or *e-commerce*, and about the different ways you can put a store on the Net. There are many roads to online commerce—although like most roads, this one has a few potholes along the way.

THE MACWORLD PART 2 WEB COMPANION

by Tom Negrino

How Does E-commerce Work?

If you've ever ordered anything over the Internet, you're familiar with the process. First, you find a site that has the product you want to buy. Next, you browse the store until you find what you want, and then you click on the Order button. That click stores the item you've chosen in an electronic shopping cart.

When you're done shopping, you proceed to the checkout area, which accepts your personal information and your credit card number. You shouldn't have to worry about the security of your credit card information, as any reputable e-commerce site will have a *secure server*—a Web server that works with your Web browser to encrypt the order.

Seller's Essentials As the seller in an e-commerce transaction, you have a different set of concerns. To set up shop on the Internet, you need a commerce-enabled Web site, which includes the electronic shopping cart; a connection to the credit card network; and finally, a *merchant account*, which allows funds received from credit card transactions to be deposited to your business's checking account.

The biggest hurdle, especially if you are just starting out in business, is getting a merchant account, which usually requires credit checks and application fees. The connection to the credit card network is either software for your Mac or a card-reading machine that connects to the authorization network via a modem. If most of your sales will be over the Net or via mail order, you don't need the machine—just your Mac, a modem, and the software.

The most common authorization software is Tellan Software's (800/483-5526, www.tellan.com) MacAuthorize, which costs about $800. Exact pricing varies because the bank or other company that helps you obtain your merchant account usually sells or leases the program as part of a multiyear contract for credit card authorization services. That same company (which could be your bank) will also take a percentage (between 1.6 and 3.0 percent) of each sale, may charge a small fee (under 50 cents) per transaction, and may charge minimum monthly service fees.

Is E-commerce for You?

Just as with opening a store in the physical world, you should evaluate the risks in e-commerce before jumping in. First, figure out how much business you need to make your Web store worth running. That will depend on the amount of your average order and your expenses each month for Web hosting and other necessities. Don't forget to add in the value of your time, as you'll need to work at updating your online store, just as you would spend time stocking the shelves in a physical storefront. Because online stores usually start out with small sales numbers (see the sidebar, "Making It Online"), in general, if you need more than a few sales per month to break even, you should rethink your business plan.

Credit card fraud, while rare, does happen, and the ugly reality is that if you ship an order based on a stolen card, you'll end up losing the goods you shipped, *and* the credit card company will charge you back for the order's amount—a double insult. You can protect yourself from fraud by contacting the customer before shipping orders that look suspicious and asking for more information, such as the name of the bank that issued the credit card, and by always requiring a signature for shipped products.

Getting Started If you do take the plunge, there are three basic ways to get your store online. You can build your own Mac-based e-commerce server and keep the whole shebang entirely in-house. There are shopping-cart services you can tie into a Web site you create yourself. And there are companies that will help you create your online store from scratch and will host and run the store to boot.

Roll Your Own E-commerce Server

If you want to create your own server, the Mac is up to the task. In terms of performance, you have nothing to worry about; because Web serving isn't a CPU-intensive task, any Power Macintosh can easily handle thousands of hits and hundreds of orders per day. You'll need a PowerPC Mac (an iMac will do

MAKING IT ONLINE

BEING SUCCESSFUL IN ONLINE RETAILING requires a different mind-set from operating a traditional storefront. A store in the real world has a predictable sales pattern; sales ramp up after the store's opening as customers get to know it, and then plateau when the store has saturated the demand in the local market. Because an online store has no local market (it's just as easy to go to one place as to another on the Internet), the online retailer can't count on window-shoppers to happen by the store. That's why so many of the so-called online malls have failed. There's no compelling reason for shoppers to go to an online mall and browse around the stores. Yahoo's shopping site expects to succeed because people are already coming to Yahoo for other reasons, such as to find things on the Web, check their free e-mail, get news, or use Yahoo's other portal services.

So *what* you sell, rather than where you sell it, is the primary indicator of your possible success as an online retailer. Making your Web site *the* place to buy a particular item is essential, because it's so easy for customers to buy from any other store. The key is to pick a small niche you can dominate. If you make or sell something people really want and can't get anywhere else, you have a good chance of online success.

It's foolish to try to compete with big, established Web merchants on their own turf. Chances are minuscule that you're going to beat Amazon.com at selling books. Paul Graham, producer of the Yahoo Store, puts it this way: "Would your product sell and your store prosper in the real world if it was right next door to a Wal-Mart? If so, there's a good chance that you'll make it online."

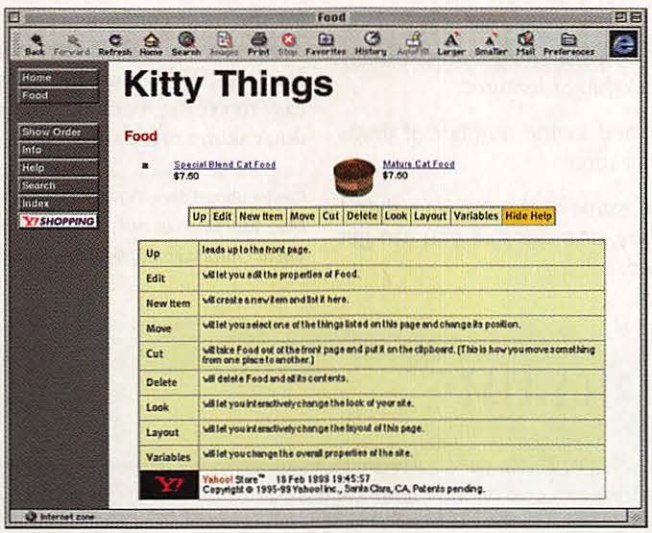

PREVIOUS PAGE—PHOTOGRAPHY BY MARK JOHANN / BACKGROUND IMAGE: FPG
SIGN LETTERING BY JOHN LUND / PHIL'S BOOKS LOGO BY PAUL ROGERS

just fine, or if you have an older computer sitting around, you can press it into service) with an Ethernet connection, a decent amount of RAM (say, 40MB), and at least 1GB of free disk space. You'll need Web server software such as StarNine's WebStar ($499; 800/525-2580, www.starnine.com) or Tenon Intersystems' WebTen ($495; 800/662-2410, www.tenon.com). You'll also want Sophisticated Circuits' (800/769-3773, www.sophisticated.com) Rebound (for ADB Macs; $99) or Kick-off (for USB Macs; $199) devices, which automatically restart the server if the Mac crashes.

For the shopping-cart software, you have two good choices: the first is the $495 Ch-Ching from Imacination Software (800/244-5332, www.imacination.com), a FileMaker Pro–based shopping cart with built-in credit card authorization abilities. It requires Blue World Communications' $548 Lasso (425/646-0288, www.blueworld.com) in order to work with WebStar. For customization, you'll want a copy of the $199 FileMaker Pro (800/986-2249, www.filemaker.com). Your other choice of shopping carts is Pacific Coast Software's $3,395 WebCatalog-WebMerchant bundle (619/675-1106, www.pacific-coast.com), which also requires that you buy MacAuthorize.

Getting Started After you have bought the hardware and software, you can get started building your Web site and online store. Both Ch-Ching and WebCatalog offer templates that will get a store on the Net quickly, but you'll probably want to customize the look-and-feel of the templates to match your site. For that customization you need some skills in HTML and (if you're using Ch-Ching) FileMaker Pro. When you've built your store, you should expect to pay anywhere from $50 to $400 a month for high-speed, continuous Internet access.

Yahoo! Profits! The Yahoo Store's Web-based interface lets you design and modify the appearance of your shopping site.

As you can see in the table, "An E-commerce Price List," the start-up costs—in money, time, and expertise—for having your own server are quite high. The most compelling reason for making this commitment is that you want and need every bit of control and customization you can wring out of your site. As such, it probably isn't the solution for most small businesses.

HOSTING YOUR OWN E-COMMERCE SITE

The Good Gives you the most control over and complete customization of your online store.

The Bad You have to learn how to create that control and customization, or pay someone else to do it.

The Ugly Costs the most money and time up front, and you are entirely responsible for 24-hour maintenance of the server.

Hook Up a Shopping Cart

If you already have an established Web site hosted by an Internet service provider, you can add e-commerce to it by either buying an off-the-shelf shopping-cart package and having your ISP install it on the ISP's server, or tying your site to a shopping-cart service. Many companies offer these services, often rented by the month for prices ranging from free to about $100, with few or no setup fees. Because these carts run as programs on the host's Web servers, you'll usually need to insert into your site's pages some specialized HTML code that calls the cart program. This task isn't generally too daunting, but you should check with the ISP to see just how much modification of your pages it will require.

Some carts, such as CheckItOut (978/440-9988, www.adgrafix.com), generate a whole store for you, even allowing you to upload images for your store's items and to customize the look of the store to some extent. Other carts, such as Americart (www.americart.com), require extensive modification of their HTML templates to get anything to work. Things you want to look for when you choose a shopping cart include the ability to calculate shipping methods and sales taxes flexibly; automatic mathematical verification of credit card numbers; automatic e-mail order confirmations; and most of all, simplicity in the ordering process. Customers won't put up with complex procedures or with systems that require elaborate registration before allowing an order to go through.

USING SHOPPING-CART SOFTWARE

The Good Fairly low cost; many options from which to choose; good add-on to an existing site.

The Bad Limited customization; HTML skills often required; some carts charge per-transaction fees.

The Ugly Serious research required to make sure shopping cart meets your needs; feature set may not grow as your store does.

Step Into a Store's Service

Perhaps the easiest way to get online is to use one of the online store services, such as Yahoo Store (http://store.yahoo.com) or iCat Commerce Online (www.icatcorp.com). Rather than grafting a shopping cart onto your existing site, these services let you build entire stores based on templates, using nothing more than a Web browser. You don't have to run your own server, and this method doesn't require any HTML knowledge, although if you want a really spiffy-looking store you'll probably want to use at least a little HTML. The price is right, too: Yahoo Store

charges $100 per month for a secure store with real-time credit card authorization and up to 50 items, and iCat costs even less, beginning with free, 10-item stores, although it won't do the authorization.

Both services say you can build a store in just a few minutes, and it's true; it's just that the result is not too aesthetically pleasing. You can use the Yahoo and iCat tools to create an attractive store, but it will take a reasonable amount of work and experimentation. You can upload your own logo, as well as images of all the products you sell, to either store. Yahoo Store automatically makes thumbnails of large images, and it even lets you download order information in Microsoft Excel format.

Besides building stores, we also tried buying from stores that use each service. The Yahoo stores worked well; the pages loaded quickly, and it was easy to go through the checkout process. Unfortunately, we had many problems with iCat's stores. As consumers, we put items in the shopping cart, only to be told later that the cart was empty and that we should call tech support. When we tried to build a store, iCat demanded a credit card number, even though we were building a free store.

SETTING UP SHOP IN SOMEONE ELSE'S STORE

The Good Very reasonable cost for small stores; usually requires no HTML skills; chock-full of features.

The Bad Costs are usually tied to the number of items you're selling; limited customization.

The Ugly In our experience, some of the software didn't work at all. Try before you buy, or make sure you can get a refund if you're not satisfied.

The Last Word

Before you start worrying about the technical problems involved in creating an Internet store, it's important that you make a strong case businesswise for selling your products online. You'll need to spend a considerable amount of time and effort to make your online venture successful, so make sure you're ready to learn the ropes and have considered the risks.

Until recently, the barrier to getting your business to sell online was fairly high, especially if you wanted to use a Mac-based server. E-commerce on the Mac meant a serious amount of programming and fiddling with custom databases, and often required specially written scripts in AppleScript or Frontier to get the shopping cart and databases to exchange data with MacAuthorize. The advent of newer products like Ch-Ching has greatly reduced the need for customization. Still, running your own server makes financial sense only if you need the tightest control over the operation and the look of your online store.

If you already have a Web site hosted on someone else's server, you should definitely look into adding a shopping cart to your site. Costs in terms of both time and money are low. But for the most convenience and bang for the buck, Yahoo Store deserves your serious attention. Besides being just a click away from the Web's most heavily visited site, Yahoo Store makes it easy to create, maintain, and manage good-looking stores that don't skimp on features. **m**

Contributing Editor TOM NEGRINO is the author of *Microsoft Office 98 for Macs for Dummies* (IDG Books Worldwide, 1998) and a coauthor of *JavaScript: Visual QuickStart Guide,* third edition (Peachpit Press, 1999).

AN E-COMMERCE PRICE LIST

THERE ARE ALWAYS COSTS INVOLVED IN MARKETING, AND selling on the Internet is no exception. We compared three e-commerce solutions to estimate start-up and ongoing costs.

For the Mac-based server, we calculated the price of an iMac running WebStar, with the combination of Ch-Ching, FileMaker Pro, and Lasso. This setup allows you to handle hundreds of orders a day and sell thousands of different items. The shopping-cart solution (CheckItOut) allows 25 items in your store; the hosted store (the Yahoo Store) allows 50 items. You can add up to 1,000 items to the Yahoo Store for $300 per month; to expand the CheckItOut store, you must buy the software for $500.

We estimated a monthly cost for each option by assuming each made 50 sales in one month at $75 each. Then we applied the fees and charges most likely to apply, based on a survey of many merchant account providers. Because the monthly costs, other than the discount rate and the transaction fees, are fixed, the more sales you make, the lower your cost per sale. The high cost of the Mac server makes it appropriate only if your sales volume will recoup the costs. The shopping cart is an attractive service, but the store is small and you have to do all the work to attract visitors. The Yahoo Store costs a bit more per month, but the quality of the shopping cart, the listing in Yahoo's shopping area, and the increased size of the store make it the best deal.

	Dedicated Server	Shopping Cart (CheckItOut)	Hosted Store (Yahoo Store)
START-UP COSTS			
Hardware	$1,398.00	NA	NA
Software	$2,131.00	$40.00 [A]	$40.00 [A]
Internet service provider start-up	$200.00	0.00	$0.00
Domain registration	$70.00	$70.00	$70.00
Banking/merchant account fees [B]	$125.00	$125.00	$125.00
Total Start-up Costs	**$3,924.00**	**$235.00**	**$235.00**
MONTHLY FEES			
Server space and connectivity	$300.00 [C]	$39.00	$100.00
Merchant account statement fee	$25.00	$25.00	$25.00
Lease for authorization software	$0.00	$40.00	$40.00
Discount rate [D]	$93.75	$93.75	$93.75
Per-transaction charges [E]	$15.00	$15.00	$15.00
Total Monthly Fees	**$433.75**	**$212.75**	**$273.75**
Cost per sale	$8.68	$4.26	$5.48

NA = not applicable. [A] For cart and store, reflects first-month authorization-software lease payment. [B] Average application fee, based on survey of many different merchant account sites. [C] Fee to maintain server at Internet service provider. [D] Based on 2.25 percent discount rate of gross sales. [E] Based on $.30 per transaction.

Town Meeting

A great way to start the conference! Hosted by MACWORLD Expo conference chairperson Paul Kent and Mac industry stalwart Bob "Dr. Mac" LeVitus, this opening session of MACWORLD Expo/New York is your opportunity to hear experts from all corners of the Mac community speak on a variety of subjects. The MACWORLD Expo Town Meeting features lectures, debates, performances, cool demos and interactive discussions. *Open to all conference and/or workshop attendees.*

New to MACWORLD Expo/New York! – You can profit from these programs which made their debut at MACWORLD Expo/San Francisco!

NEW! The **Corporate Buyers Alliance (CBA)** matches corporate exhibitors with eligable corporate attendees so professional attendees with a buying agenda can easily identify the exhibitors on whom they wish to focus their attention. Look for the CBA logo identifying participating companies.

NEW! **Extend your learning beyond the classroom!** The **Conference Exhibitor Connection** helps you pinpoint the exhibitors on the MACWORLD Expo/New York show floor who offer the products and services you'll discuss in your conference sessions. The Conference Exhibitor Connection Reference Guide lists every session and indicates the participating MACWORLD Expo exhibitors whose products or services are connected with the topic.

Try New Products, Learn New Skills, Exchange Ideas... and More-Visit the Special Interest Environments on the Show Floor!

- **Macintosh Gaming Championship and Exhibits**
- **Education District**
- **Consumer Showcase**
- **Developer Central**
- **Net Innovators**
- **Digital Media Studio Featuring QuickTime™**
- **MACWORLD Expo Digital Art Gallery**
- **Extensions Workshop for Creative Content**

Visit the MACWORLD Expo Web site frequently for an updated list of companies participating in the Special Interest Environments.

Register by June 21 and Save!

Macworld EXPO

MACWORLD Expo TWO Conference Programs!

Something for Everyone!

Macworld/Pro Conference

The Technical Conference for Macintosh Professionals

Get the most from your Mac- based products, learn about new and emerging technologies and explore hot topics. Delve into the new Mac OS products that are shaping the Mac market. The Macworld/Pro conference programs take you inside these fast-growing areas:

- **Macintosh Networking and Communications** - Learn techniques and technologies associated with deploying Macintosh LANs, WANs, Internet/Intranets and remote access. Get the most from your existing network or learn how to make it state-of-the-art.

- **Digital Video** - Sessions in this track will give you expert analysis and direction for producing video on your Mac and delivering video from your desktop.

- **QuickTime™** - QuickTime™ is changing the way people communicate ideas and information. Learn how to produce optimized QuickTime™ content in these exciting sessions.

- **Web Development** - Make the most of your organization's Web presence with exciting techniques learned from these sessions.

- **Advanced Techniques** - Go inside some of the hottest Macintosh technologies in the Advanced Techniques Track and discover ways to extend the platform and make it work for you more powerfully than ever before.

- **Color** - Learn the basics of color theory and deployment of Apple's ColorSync technology; see how creative content designers are providing their customers precise color accuracy in their proofing and finished products.

- **PDF** - Attend sessions in this Portable Document Format (PDF) track to gain an in-depth understanding of how to successfully deploy PDF, work around it's limitations and maximize its potential.

- **Creative Industry Issues** - Hear from industry experts how to be more profitable, more efficient and more employable in the creative industries. You'll gain practical knowledge that will help you run a leaner, meaner and more productive creative group.

- **Managing the Mac Platform** - Features sessions that look at the needs of organizations using the Mac, and presents methods, practices and technologies that are defining the role of the Macintosh manager.

MACWORLD Expo Users Conference

Let the professionals teach you how to use your Mac at work, at home, in the classroom and on the road!

Whether you use your Mac at home or at work. In your home office, your classroom or on the road, this conference will show you how to get more out of the work you do, the things you learn or teach, the games you like to play and more. An array of information-packed sessions taught by world-class instructorsenhances your skills, raises your productivity, and makes your Mac experience more enjoyable with these Tracks:

- **Maxing Your Mac** - Put your Macintosh in full throttle and squeeze every bit of performance out of it. Whether you're working with an old Mac or the latest model, you'll get sound advice and useful tips from experts.

- **Inside Apple Technologies** - Inside your Macintosh are some of the most advanced and innovative system technologies. Gain in-depth understanding of these technologies and learn how to use them to develop some of the coolest computing solutions.

- **Top Tools** - These sessions will unlock the secrets of your favorite programs and get you up to speed quickly with advanced features you didn't know were available.

- **Crash Courses** - Attend the Crash Courses for a quick hit of technology explanations to help make you a more informed Mac user.

- **The Mac in Small Business** - It has never been easier to use Macintosh technology to launch and operate a small company, home-based business or telecommute from your home. Learn from experts how to put technology to work for you.

- **MACWORLD Expo Gallery** - Creative people have always chosen the Macintosh. This track features renown artists from the Mac community demonstrating their dazzling works and explaining how they use Mac-based tools to achieve stunning success.

- ***Macworld* Magazine Presents** - *Macworld's* editors, columnists and featured guest speakers present the hottest topics straight off the pages of the industry's premier publication.

- **Macs in Education** - The Macintosh paradigm for computing ease-of-use has made it the platform of choice for educators world-wide. This track showcases innovative applications and techniques that can enhance both learning and teaching opportunities.

- **Goodies** - These presentations and ideas will put a smile on your face and demonstrate things that are cool for cool's sake. Join fellow members of the Macintosh community as we celebrate technology in this wild, weird and wonderful track.

Pre-Conference Workshops

Make the most of your time at MACWORLD Expo/New York — spend an entire day getting in-depth training before the conferences and exhibits begin. Visit the Web at www.macworldexpo.com for complete workshop descriptions.

Register by June 21 and Save!

Early Discount Registration Form for MACWORLD Expo/New York 1999

Jacob K. Javits Convention Center ● Town Meeting & Pre-Conference Workshops: July 20, 1999 ● Conference Sessions & Exhibits: July 21-23, 1999

Register by June 21 to Get Maximum Savings and a chance to win a FREE iMac or a G3! Register now on the Web at: www.macworldexpo.com

5 Pre-Conference Workshop Key and Registration Information

WORKSHOP KEY:

Tuesday, July 20: 12:00 p.m. - 7:00 p.m.

- **WA:** Practical Introduction to Mac Networking
- **WB:** Desktop Publishing: The Big Picture
- **WC:** Creation of High Quality Photographic Web Content
- **WD:** Macintosh Network Administration with the Apple Network Administrators
- **WE:** The QuickTime™! Professionals Workshop
- **WF:** How to be a Mac Power User
- **WG:** Getting Started with Applescript
- **WH:** An Introduction to WebObjects Development
- **WI:** Java Script and Dynamic HTML Wizardry
- **WJ:** Macintosh Audio Solutions for Real World Challenges

Workshops are subject to change, please visit the Web at www.macworldexpo.com for the most up-to-date information.

REGISTER NOW!

Use ONE of the following methods to register with this form:

WEB: www.macworldexpo.com THROUGH 7/14/99. Registrations received after 6/2199 will be charged at regular pricing.

PHONE: 800-645-EXPO or 781-551-9800 outside of the U.S. ($5 service fee does apply) THROUGH 7/14/99. Registrations received after 6/21/99 will be charged at regular pricing.

MAIL TO: MACWORLD Expo/New York P.O. Box 9103, Norwood, MA 02062-9103. THROUGH 6/21/99 ONLY.

FAX: 781-440-0359. Faxed registration form must include credit card information THROUGH 6/21/99 ONLY.

BADGE INFORMATION

- Confirmation of registration will be sent once registration is processed.
- U.S. badges will be mailed after 7/5/99 for registrations received by 6/21/99.
- All international (including Canadian) attendees must pick up badges on-site at the On-site Badge Pick-up counter.
- If you register between 6/21/99 and 7/14/99 you must pick-up your badge on-site at the On-site Badge Pick-up counter located in the Southside of Crystal Palace.
- On-site Registration/Badge Pick-up Hours:
 July 19: 2:00 p.m. - 6:00 p.m.
 July 20-22: 8:00 a.m. - 6:00 p.m.
 July 23: 8:00 a.m. - 4:00 p.m.

Secrets

Common Problems, Affordable Fixes

GREAT SHAREWARE TO TACKLE SMALL BUT IRRITATING DIFFICULTIES ON YOUR MAC

by Ted Landau

Shareware authors take on problems commercial developers often consider too small to worry about—yet these problems can be widespread and extremely annoying. Here's a list of some of the most common problems that bother Mac users, as well as the right shareware utility to fix each one. You can download the shareware from online sites such as MacFixIt (www.macfixit.com/library.shtml) and the Macworld Online shareware library (www.macdownload.com).

How Do I Quit Nothing?

"I get an error message that says I can't do some task until I close all applications. However, when I check the Application menu, it lists nothing besides the Finder. What's going on?"

Use Peek-a-Boo. You're probably running a background (or *faceless*) application. This hybrid, which is halfway between standard applications and extensions, may be open even though the Application menu doesn't list it. Fortunately, there are utilities that list all open *processes* (a generic term for both background and ordinary applications) and let you quit them. My favorite is Peek-a-Boo (Clarkwood Software; $20).

Peek-a-Boo not only lists all open applications but also displays the percentage of time your processor spends with each open program (see "Reveal All"). This can help you spot processor hogs that may be slowing down your Mac. You can choose to quit the hog or use Peek-a-Boo to change its priority ranking. Setting an application's priority to low causes it to request less of the CPU's attention if several applications are open at the same time. If the priority is set to high, the application automatically gets more processor attention.

A Tornado Hit My Desktop

"Whenever I change the resolution of my monitor, all the icons for the files on my desktop get moved to new locations. My desktop now looks like an experiment in chaos theory. Even worse, when I return to my default resolution, the icon locations stay messed up."

Use Desktop Resetter. Changing a monitor's resolution isn't the only way to mess up your desktop icons. Another way is to use the Finder's Clean Up command. After you're done shouting obscenities (which the icons routinely ignore), you still have to put all the icons back in place.

You can avoid this aggravation with Desktop Resetter (Nick D'Amato; $10). Click just one Desktop Resetter button, and the program memorizes where your icons sit. When icons get out of order,

continues

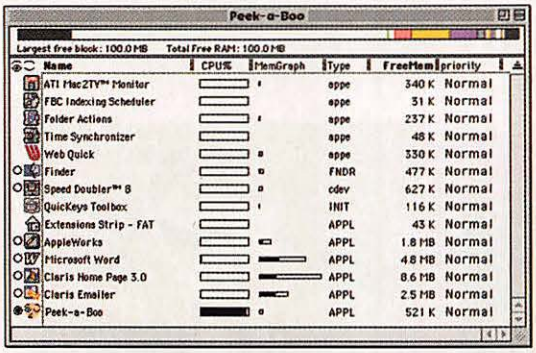

JENNIFER JESSEE

just click another button to put them back where they belong.

It's a Hassle to Print from the Web

"Often I just want to print a couple of paragraphs from a Web page. Can I avoid having to copy the text to my word processor?"

Use Net-Print or WebPrint Plus. Install either Net-Print (John More; $15) or WebPrint Plus (Steve Becker; $15), and you can print any selection right from your browser. Even better, you can append separate selections to one file. Neither utility can print graphics, and you'll lose HTML-based text layouts. But for simply printing text, there are no easier solutions.

Reveal All Peek-a-Boo lets you see applications running on your Mac that you might not otherwise know were there. Only the items preceded by a circle appear in the Applications menu.

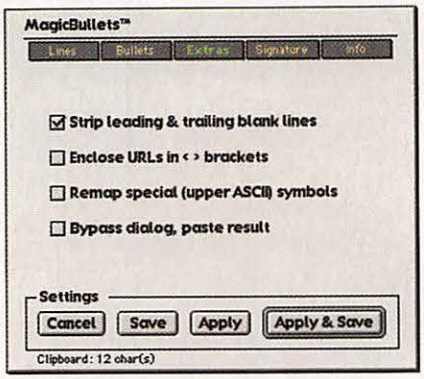

My E-mail Has More Odd Characters Than an Ally McBeal Episode

"When I copy an e-mail message to my word processor, hard returns appear at the end of each line—preventing the soft wrap that usually occurs. Plus I'm stuck with those angle brackets (>) that appear at the start of each line of quoted text. Isn't there some fast way to clean all this up?"

Use MagicBullets. This utility makes cleaning up your text as easy as copying it to the Clipboard. Just use **1**-shift-C, instead of the usual **1**-C, to have MagicBullets (Bill Karsh; $5) clean up unwanted characters in your text. Then you can paste it back over your original selection (see "Cleanup Time"). Other text-cleaning utilities may do a bit more, but none are quite as seamless to use.

I've Lost the Contents of My Hard Drive

"My hard disk just crashed and burned. No utility could repair the drive or recover files from it—not Disk First Aid, not Norton Utilities, not anything. Short of spending the big bucks to get help from a disk-recovery company, is there any hope of getting back my files?"

Cleanup Time MagicBullets helps you clean up text, such as text you get via e-mail. It can, for instance, get rid of extra spaces and blank lines and enclose all URLs in brackets.

Use Data Rescue. Data Rescue (The Wild Bits; $39) has become the court of last resort for data recovery. Although every recovery utility claims to recover certain files the others can't, no utility is successful as often as Data Rescue. The only downside is that it won't fix your drive; you'll still have to reformat that when you're done. ■

TED LANDAU's MacFixIt Web site (www.macfixit.com) contains a library of the latest and greatest in troubleshooting utilities.

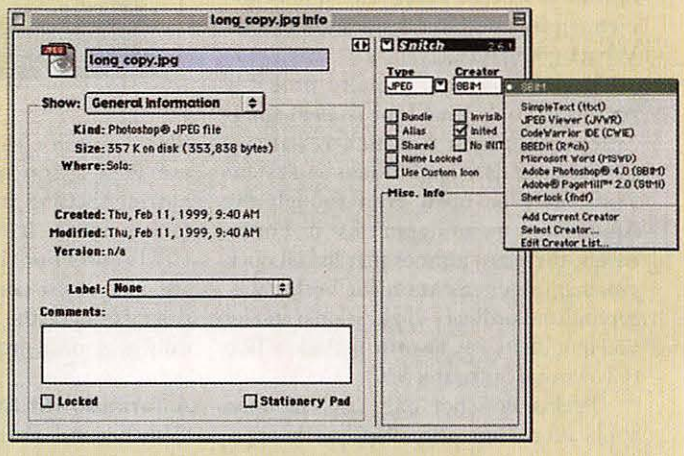

New Faces for Old Favorites

SOMETIMES ALL IT TAKES TO FIX A PROBLEM ON YOUR MAC IS updating software. Here are three scenarios in which shareware you already have installed may be showing signs of age.

Misbehaving StuffIt Expander Does Aladdin Systems' freeware StuffIt Expander refuse to decompress certain files? Your copy may be too old—StuffIt Expander 4.5 can't decompress StuffIt Deluxe 5.X or DropStuff 5.X files. Upgrade to version 5.1 or later.

Misguided TechTool Does TechTool report that your System file is damaged, even though you just installed a clean new copy of your system software? MicroMat's freeware utility is great for rebuilding the desktop, zapping your PRAM, and checking your System file for damage. However, every time Apple comes out with a new version of the Mac OS, you have to update TechTool as well—otherwise it erroneously reports that the System file is damaged. If you're using Mac OS 8.5.1, you need TechTool 1.1.8.

Snitty Snitch Do you get a system crash or other error when opening a file's Get Info window? If you use Snitch (Nifty Neato Software; $20) with Mac OS 8.5.X to add options to Get Info windows, make sure you have Snitch 2.6. Earlier versions simply won't work. If you've upgraded to Mac OS 8.5.1, you'll need an additional Snitch patch to get to version 2.6.1.

Get the Right Info Snitch puts handy options in the Get Info windows of your files. If you need help making changes, you can refer to Snitch's pop-up menus of common choices.

Secrets

Tips, Tricks, and Shortcuts

by Lon Poole

Extensions are notoriously difficult to get properly housebroken. After painstakingly creating several custom start-up sets in Apple's Extensions Manager, David Battino of Cupertino, California, was dismayed to find that every time he installed new software, it would spray its extensions and control panels into all of his custom start-up sets.

He tried locking his start-up–set files (which reside in the Extensions Manager Preferences folder, inside the System Folder's Preferences folder) via the check box in their respective Get Info windows. This worked, but then the Extensions Manager insisted on making copies of the files whenever he tried to select them. The solution was to change each start-up set's file type from ESET to tamper-protected RSET with ResEdit or any other utility that lets you change a file's type. A start-up set whose file type is RSET appears with a padlock icon at the top of the Extensions Manager's Selected Set menu, just like the Mac OS Base set.

Access Your Whole Drive over the Web

Q. I use Mac OS 8.5's Web Sharing feature to access my office computer's hard drive via the Internet. But when I connect as the owner, I can see all the files on the hard disk but I can't download some types of files from nonshared folders. For instance, SimpleText and Deneba Canvas documents download fine, but I'm denied access to Microsoft Word documents unless they're in a shared folder. The Web Sharing control panel is set to use file sharing, for controlling user access (for obvious reasons); the Web Sharing preferences are set to allow aliases to open items outside the Web folder, and that folder contains an alias of my hard drive. So what am I missing here? I can't for the life of me figure this one out.

ROBERT BENEZRA
New York, New York

A. Unlike File Sharing, Web Sharing doesn't allow someone connecting as the owner to access all files on the hard drive unless the drive has been explicitly set for sharing.

Use the Finder's Sharing command

to turn off the option Share This Item And Its Contents for each folder you currently share. Then turn *on* this option for the hard drive, and set the owner privileges for the drive to Read & Write.

If necessary, you can also grant access privileges for the drive to a user or a group, and you can set access privileges differently for individual folders inside the drive. To prevent guest access, open the Users & Groups control panel, double-click the Guest icon, and make sure the option Allow Guests To Connect To This Computer is turned off.

Instead of using Web Sharing to access your files over the Internet, you might want to try OpenDoor Networks' ShareWay IP Personal (www.opendoor.com). This $79 utility magically makes the Mac OS's built-in personal file sharing available over the Internet or a TCP/IP intranet.

To access your office machine's hard drive through the Chooser on another Mac connected to the Internet or intranet, click the Chooser's Server IP Address button and type in the IP address of your office Mac. Then follow the usual procedure for connecting to a shared drive or folder; for example, enter the owner name and password in one dialog box and select your office Mac's hard drive in another dialog box. In a few moments, your office Mac's hard-drive icon will appear on the desktop of the remote Mac you're using, and you're in business.

You can also try Stairways' $10 shareware FTP server NetPresenz. It has more complex configuration options than Web Sharing, but it's faster and handles owner access like File Sharing does. Plus, you can use a Web browser instead of an FTP client to access the FTP server.

If you've blocked guest access to your FTP site, put your user name into the URL for your FTP site; for example, ftp://yourname@ftp.yourdomain.com. The browser will then ask for your password, unless you're using Microsoft Internet Explorer for Windows. In that case, you must include the password in the URL; for example, ftp://yourname:password@ftp.yourdomain.com. For security, quit the browser when finished.

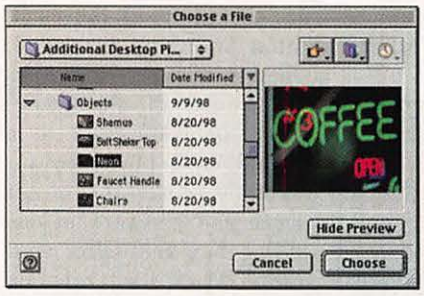

continues

Enjoy Enhanced Open and Save

Q. The March 1999 issue of *Macworld* refers at least twice to the ability to resize Mac OS 8.5's Open and Save dialog boxes. I have 8.5.1 and cannot resize unless I have Power On Software's Action Files utility installed. What am I doing wrong?

BILL BUNN
Brentwood, Missouri

A. The new dialog boxes appear only in programs whose developers have revised them to use the Navigation Services of Mac OS 8.5 and later, so it's going to be a while before they're available in every program. Meanwhile, if you want to experiment, try saving and opening in Sherlock or setting a desktop picture with the Appearance control panel (see "A Better Dialog Box").

A Better Dialog Box Open, Save, and other disk-related dialog boxes get a new look and many new features in Mac OS 8.5 and later—but only in applications that have been specifically revised to use 8.5's Navigation Services.

No-Hassle Sherlock Indexing

TIP If you want Mac OS 8.5's Sherlock program to index your hard drive after-hours but don't want to leave your computer on all night, use the Energy Saver control panel. Set it to start up your Mac several hours before you need it in the morning, and schedule Sherlock to begin indexing five or ten minutes after start-up. If you set these automated events to happen daily, your Sherlock index will be current every morning.

MATT SHUCKER
Phoenix, Arizona

If you prefer, you can have Sherlock index your hard drive just before your computer shuts down. At the end of the day, begin the indexing process in Sherlock. Once the Indexing Progress dialog box appears, switch to the Finder and shut down the computer. During the shutdown process, an alert appears asking whether you want to finish indexing before shutting down. Click this alert's Continue button and the computer will shut down after indexing is complete.

Or you can simplify the whole procedure by using the $10 shareware Index & Shutdown from Carnation Software. And if your Mac model can't be completely shut down under software control, you can add this capability for $70 or less with a Sophisticated Circuits PowerKey device (www.sophisticated.com/products/powerkey.html).—L.P.

Speed Up Slow Floppies

TIP Although the iMac's popularity may make 3.5-inch floppy disks less ubiquitous, many Mac users still depend on them. But a floppy that you've used over and over again can bring your system to a grinding halt when you wait for its icon to appear or window to open. The solution can be as simple as rebuilding the floppy's desktop file: hold down the ⌘ and option keys while you insert the disk. The increase in performance can be staggering.

TIMOTHY T. LUNDIN
Omaha, Nebraska

Make All the Moves

TIP If you enjoy playing Eric's Solitaire Sample (by Eric Snider and included on the Mac OS CD) and want to increase your chances of winning by not missing any moves, simply press the caps lock key and all playable cards will be highlighted.

MICHAEL NARDUCCI
Miami, Florida

Mount Faster over Networks

TIP You may know that you can quickly mount a file server or someone's shared folder from your network by opening an alias of the file server or shared folder on your Mac. This technique avoids the Chooser and Mac OS 8.5's Network Browser, but it always opens the alias's original item in addition to mounting it. Depending on network traffic and the amount of stuff in the file server or shared folder, you may need a haircut before it finishes opening. To mount the file server or shared disk without opening it, select the alias of it on your Mac and choose Show Original from the File menu (⌘-R) or the alias's contextual menu.

LAURIE SPIEGEL
New York, New York

Alternate QuarkXPress Shortcuts

TIP The shortcuts for switching tools in QuarkXPress—⌘-tab and ⌘-shift-tab—are also used for switching applications in Mac OS 8.5 and later. Despite the conflict, you don't have to change the shortcuts for Mac OS's Application Switcher using Mac OS Help, as described in February 1999's *Quick Tips*. Instead, simply press ⌘-option-tab and ⌘-option-shift-tab in QuarkXPress 3.32 and later to switch tools like normal.

MARTIN WINTER
Acworth, Georgia

Free .exe File Expansion

The latest version of Aladdin Systems' free StuffIt Expander (www.aladdinsys.com) decompresses the most common PC compression formats all on its own. With StuffIt Expander 5.1, you no longer need Aladdin's shareware Expander Enhancer (mentioned in April 1999's *Quick Tips*) to expand files whose names end with .exe, .zip, or .gz. ■

LON POOLE answers readers' questions and selects reader-submitted tips for this monthly column. His latest book is *Macworld Mac OS 8.5 Bible* (IDG Books Worldwide, 1999).

All shareware and freeware mentioned in *Quick Tips* is available from the Macworld Online software library (www.macdownload.com).

We pay $25 to $100 for tips selected for publication that discuss how to use Macs, peripherals, or software. Please include your full name and address, so that we can send you your payment. Send questions or tips to quicktips@macworld.com or to Macworld Quick Tips, 301 Howard St., 16th Fl., San Francisco, CA 94105. All published submissions become the sole property of *Macworld*. Due to the high volume of mail received, we cannot provide personal responses.

"Macworld Lab has proven to be one of the most pristine and controlled lab environments to which we've provided our scanners and software for testing."

Jon Guerringue, Marketing Manager
Heidelberg Color Publishing Solutions

Don't Sabotage Your Professional Print Job

TEN CLASSIC MISTAKES THAT MAKE A GOOD SERVICE-BUREAU JOB GO BAD

by Stephen Beale

You've been working for weeks on that eye-popping logo your client needed yesterday. Now you amble up to the counter with your Zip disk, ready to place your livelihood in the hands of a service-bureau technician. How can you be sure the graphic that sizzles on screen will look just as good in print? It all depends on what you do before you hand over the disk.

As a service-bureau customer, you have the right to see that the job is done well, on time, and at a reasonable price. But you also have a responsibility to learn what it takes to submit trouble-free files. *Macworld* surveyed a handful of service bureaus across North America to identify the primary causes—and solutions—for common imaging problems. Avoid these mistakes, and you'll reduce the odds of getting an unpleasant surprise when your packet comes back. Our thanks to SpectraComp (Mechanicsburg, Pennsylvania), the Printing House (Toronto, Ontario, Canada), Indian Rock Imagesetting (Berkeley, California), and Canterbury Press (Berkeley) for their assistance.

1. Be Slipshod with Your Prep Work

Most imaging services cite poor file preparation as the number one output problem they encounter. Common gaffes include submitting jobs with bad or missing screen or printer fonts, missing linked graphics, and incomplete or illegible job tickets—your instructions for handling the job. Before you submit your project, take some time to ensure that all the pieces are in place. Be especially careful with jobs that include embedded EPS files; any fonts those files include must be present for the job to print.

Adobe PageMaker and QuarkXPress both include features that gather the files associated with your job and store them in a folder you specify. PageMaker collects fonts and graphics, while QuarkXPress collects only graphics.

2. Throw Preflights to the Wind

It's all too easy to make a mistake that messes up a print job. Such errors as forgetting to include a font or submitting an image in the wrong format could cost you hundreds of dollars in wasted film or paper. The best defense is to

continues

use a preflight program—such as Preflight Pro, from Extensis (800/796-9798, www.extensis.com), or FlightCheck, from Markzware (800/300-3532, www.markzware.com)—to inspect your files for conditions likely to cause output errors. A successful preflight is no guarantee that your file will print correctly, but it certainly improves the odds.

3. Prance In without a Proof

If you're in a hurry, it's tempting to skip steps. One you should never skip, though, is generating a proof of each color separation on a PostScript laser printer before submitting your job to the imaging service. Proofing not only lets you check for mistakes but also helps ensure that the file is free of conditions likely to cause PostScript errors. Also, send a copy of the proofs along with the job to provide a guide for the service bureau's production staff. To avoid confusion, be sure the proofs reflect *all* last-minute changes to the file; if technicians see a discrepancy, they'll have to delay the job—perhaps adding to the output charges—to check with you.

4. Send Freaky Fonts

Here's another one that will make them squirm: submit only TrueType fonts. Font problems have long been the bane of imaging services, and they remain a common cause of output errors. To play it safe, stick with Type 1 fonts from recognized type foundries, and be sure to send copies of the screen and printer fonts along with the job to avoid font-substitution errors.

Scan In or Take Out?

SHOULD YOU DO YOUR OWN image scanning or leave it to the service bureau? The answer depends on your budget, the volume of images you scan, and—perhaps most important—your quality standards.

Not surprisingly, most imaging services would prefer that you pay them to do the scanning for you, and they make a good point: they use costly drum or flatbed scanners and have staffers who are expert at getting the best quality from each scan.

On the other hand, high-resolution scans are expensive, even with volume discounts, and the current generation of midrange flatbed and slide scanners—which sell for $3,000 to $10,000—do an admirable job of capturing images for many kinds of publishing applications. If the image quality from these scanners is sufficient for your needs, you can save money and get an extra degree of control by purchasing one and doing your own scanning. You can also try a combination approach, turning to your service bureau for high-profile images or those you plan to enlarge, and using your in-house scanner for everything else.

If you plan to do your own scanning, you'll get the best results by scanning slides or transparencies instead of reflective copy. You'll also need to scan at a resolution sufficient to reproduce the image in print. As a rule of thumb, scan the image at about 1.5 times the resolution of the halftone you plan to produce. For example, if you plan to print the image with a 100-line screen, scan it at 150 dots per inch. This assumes that you'll reproduce the image at the same size as the original. If you plan to enlarge the image, you should boost the scan resolution by the same percentage.

Some imaging services accept jobs with TrueType fonts, but most discourage it because PostScript output devices handle Type 1 better than they handle TrueType. You can tell the difference by looking at the font file's icon: Type 1 fonts have a single character in the icon, while TrueType fonts have three. Most preflight programs can help by quickly spotting those pesky TrueType fonts in your files.

Even more important than submitting the right type of font with your print job is using just one type. A print package that includes both TrueType and Type 1 fonts will put a few gray hairs on the head of any service-bureau worker. The service-bureau folks will also age prematurely if you throw in a cheap font or two from an unknown vendor—you know, those fonts from "Fonts Are Us" that cost $29.95 for 100. Such fonts tend to cause output problems.

5. Rebel against the Standards

Using offbeat graphics and obscure publishing applications gets your service bureau in a snit and gives you unpredictable results. It's usually best to submit files from standard applications. You can count on your service bureau's having current releases of QuarkXPress, Macromedia FreeHand, Adobe Illustrator, Adobe PageMaker, and Adobe Photoshop (you can be sure Adobe's new InDesign will join the list soon). Its production staff should be experienced in dealing with output problems specific to these packages. If you're using a program that's not among the supported applications, you'll have to submit a PostScript print file, because the service bureau won't be able to open the native format.

In general, you should stick with recent software releases—including any updates that fix output-related bugs. However, there are exceptions: some ser-

vice bureaus prefer receiving jobs in QuarkXPress 3.X format due to output troubles in QuarkXPress 4.0, although subsequent updates have fixed many of these problems. Always check with the imaging service to see which programs and versions it supports.

It's also best to stick with standard formats when placing files in your page layout—typically EPS for vector graphics, and EPS or TIFF for bitmapped images. In most cases, avoid JPEG compression, which sometimes adds image artifacts. Many service bureaus also prefer that you avoid PICT files.

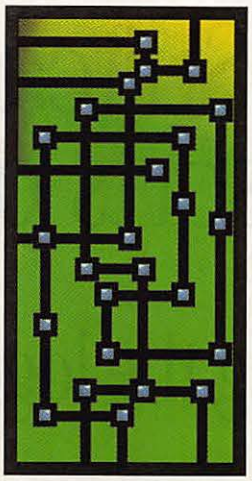

Some imaging services on the so-called bleeding edge accept files in the Adobe Acrobat PDF format, anointed as the prepress format of choice for the future. However, the future is not here yet, and while many imaging services are adopting PDF in their internal workflows, few are comfortable *receiving* PDF files—for now.

6. Exude Software Ignorance

Each major graphics and publishing program has certain idiosyncrasies that come into play when the application is producing high-resolution output at an imaging service. Learning these peculiarities and designing your print package to work around them makes printing go more smoothly. The program documentation should cover most of them; some software publishers even include commercial-printing guides for their packages. Your imaging service can also be a good source of information about application-specific issues, especially those related to particular output devices. However, avoid the temptation to use your imaging service as an unlimited source of free software training; that's another great way to sour a good working relationship.

7. RGB Them to Tears

Those RGB images that look so great on your computer screen won't print properly on most PostScript output devices. To make the images print, you must convert them to CMYK. If you're preparing images in Photoshop or another image-editing application, it's best to do the conversion after you've made all modifications to the images but before you import them into your page-layout software.

Be sure to keep a copy of the RGB version in case you want to use it later, since RGB offers a wider color gamut and is typically more amenable than CMYK to image modifications. You'll also need RGB if you want to produce slides or transparencies on a film recorder and, of course, if you want to post images on your Web site.

8. Vex Them with Vectors

Overcomplex vector illustrations can quickly bring a PostScript device—particularly one with an older raster image processor—to its knees. Especially treacherous are gradient fills and nested graphics (one EPS file inside another).

If you're having trouble printing a vector drawing, simplify it by deleting redundant points or hidden objects. You can also try converting it into a high-resolution bitmap.

If your EPS includes text, you may run into a different printing problem if the service bureau doesn't have the font you used. To avoid encountering such a problem, convert text to curves before you send the job off.

9. Mix Up Spot Colors

Some imaging services cite spot colors as a frequent source of output difficulties. One problem is that different applications may identify the same Pantone color with different labels. If you import a file into a page layout that includes the same spot color with a different label, the software thinks it's dealing with two distinct colors and prints an extra separation.

Make sure you're consistent when specifying whether you want to print the spot color as an extra ink or as a CMYK composite, or—again—you'll end up printing an extra separation. This is another instance in which printing a set of laser proofs can help you ward off printing problems.

Another common problem relates to *trapping*, a technique for avoiding misregistration between adjoining colors. Many imaging-service customers try to save money by performing their own trapping, only to pay more in the end because the service bureau has to remove what turn out to be bad traps. Most imaging services have automated trapping software and personnel experienced in using it.

10. Strive for Estrangement

People who are service-bureau "hoppers" don't get all the benefits a regular customer does. If you're a regular, the service bureau comes to know the ins and outs of your jobs, and you get to know the quirks of its equipment. During crunch times, you're likely to get better treatment than someone who walks in the door for the first time. You may also be eligible for volume discounts. However, it's also a good idea to identify a backup facility you can use if your primary service bureau's equipment goes down.

As in any relationship, effective communication is paramount. Always consult with your service bureau's rep before embarking on a complex project that will require its assistance. **m**

Senior Editor STEPHEN BEALE covers imaging products and technology for *Macworld*.

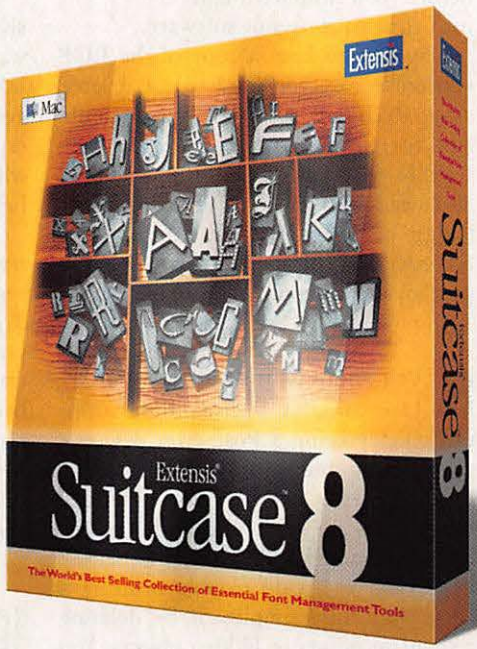

Now Suitcase™ 8 comes with all sorts of new features

(Including the logo in the corner of this ad)

Mac

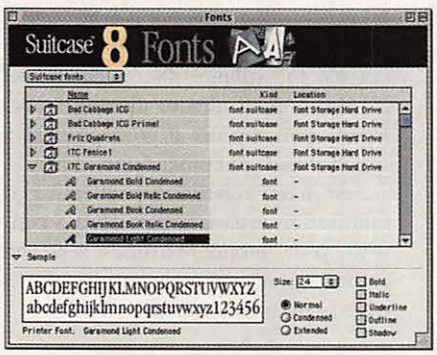

8.5

Compatible

UPGRADE NOW AND SAVE BIG! $39.95

We're not saying they didn't love Suitcase™. We just love it more. We've packed new Extensis Suitcase with everything you need to take control of your fonts. The font management features in Suitcase 8 make it easier than ever to locate, organize and quickly activate the fonts you need to get the job done.

- NEW Suitcase is optimized for Mac OS System 8.5.
- NEW Keep your System up to speed by opening only the fonts you need when you need them.
- NEW No more "missing fonts" dialog box. Saves time creating and outputting QuarkXPress files.
- NEW Organize, manage and display fonts in their own type styles and group fonts by families in your menus.

ORDER NOW! EXTENSIS SUITCASE 8

Master Photoshop's Masking Tools

EXPERT TECHNIQUES TO SIMPLIFY MAKING SELECTIONS

by David Blatner

Anyone who's ever painted a room or a house knows that masking tape is an essential tool for determining what gets paint on it and what doesn't: put tape on a windowpane and paint the frame, pull the tape off and the glass is paint free. Adobe Photoshop also comes bundled with a roll of masking tape—digital masking tape, of course—hidden in three different features: selections, alpha channels, and masks.

Digital masking tape is better than real masking tape—you just need to learn how to manage and manipulate it efficiently. Someone could write an entire book about the hundreds of tips and techniques for making *selections* (which determine where the masking tape is placed), but it all really comes down to one thing: getting a good *transition* between what's selected and what isn't.

To borrow a phrase from the folks at Ultimatte: "There are no edges . . . only transitions." A clumsy transition results in edge spill: colors from the background spill over into the masked part of the image, making the image look artificial and out of place when it's dropped onto a different background (see "Choke and Spread Edges").

In this article I discuss techniques that help you get good selections quickly and then build selections to composite images together. The techniques are also appropriate for other uses, such as making a selection before applying a filter or using painting tools. In some cases, commercial plug-ins (mentioned below) may do the job better and faster, but with a little practice you should be able to make expert selections with relative ease.

NAOMI SHEA

See www.macworld.com/more/ to learn how to transform selections made with the standard marquee tool.

Principles of Masking

If you remember only one thing from this article, it should be this: selections, alpha channels, and masks are all exactly the same thing in Photoshop's eyes. Whenever you make a selection in Photoshop, the program "sees" that selection as a gray-scale image in which the selected parts are white and the nonselected parts are black. The black part is the digital masking tape, covering the parts of the image that aren't selected; the white part is "uncovered" and ready for painting.

The powerful thing about digital masking tape is its relationship with the color gray: you can also partially select pixels in your image, and these areas are represented by shades of gray. The paler the gray (that is, the closer to white) an area is, the more pixels are selected. Generally, the edges of a selection's mask are slightly gray (or *antialiased*) to create a gentler transition between white and black areas.

Quick Mask There are several ways to see a visual representation of your selection. One is Quick Mask mode, which you can switch to by clicking on the Quick Mask button at the bottom of the Tool palette or by pressing the Q key. In Quick Mask mode, the masking tape is colored (usually red, to remind us old-timers of rubylith), and the selected parts

continues

Select and Compose This composite image was formed by conquering several selection challenges, as described in "Choke and Spread Edges," "Extract from a Channel," and "Make Layer Masks." (See www.macworld.com/more/ for "Transform Selections.")

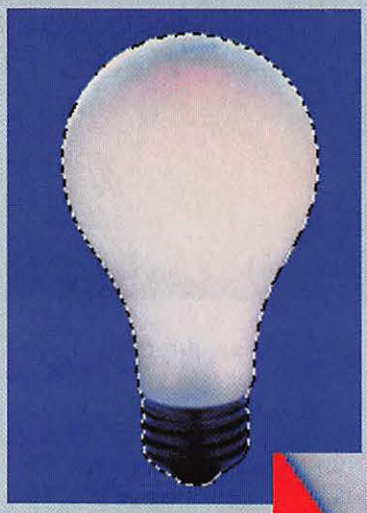

are transparent instead of white. Because Photoshop's regular "marching ants" selection marquee isn't very precise, I tend to use Quick Mask mode for everything but the most basic rectangular selections.

You can edit your selection by editing the Quick Mask—paint in it, use filters, and so forth. Don't be afraid to custom-paint your selections instead of using the standard selection tools. Just switch to Quick Mask mode, paint in areas with the various brush tools, and press Q again to leave Quick Mask mode and see the marching ants around the area you painted.

Channels and Layer Masks Another way to get a visual representation of your selection is to save it as an alpha channel. Don't be scared by the term *alpha;* it just refers to a gray-scale channel—in addition to the regular CMYK or RGB channels (see "Extract from a Channel")—that stores the mask information. You can save a selection as an alpha channel by choosing Save Selection from the Select menu or by clicking on the Save Selection As Channel button at the bottom of the Channels palette. Whereas Quick Masks disappear when you deselect your selection, you can save alpha channels with your document and

Choke and Spread Edges

NEVER EXPECT A TOOL TO MAKE A GOOD SELECTION BY itself. The magic wand and Photoshop 5's magnetic-lasso tools are good cases in point: both make a perfectly adequate first pass at creating a selection, but then it's your turn to fine-tune it. Because the biggest problem with selections is usually edge spill, you need a good technique to *choke* or *spread* the selection—make it uniformly smaller or larger. While the Contract and Expand options in the Select menu's Modify submenu work fairly well, I find they're usually too blunt an instrument. Here's another option you can use instead.

A

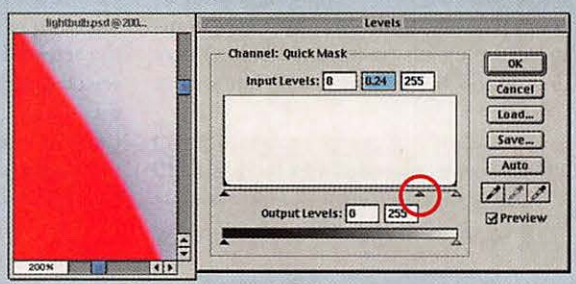

B

1 At first glance, using the basic magic wand to draw around the lightbulb gives me a reasonable selection (A). But when I switch to Quick Mask mode and zoom in, I can see where edge spill will occur (B). (Quick Mask mode is one of the best ways to detect edge spill.)

2 While in Quick Mask mode, I run the Gaussian Blur filter with a radius of 1 or 2 pixels. The edge spill immediately worsens, but it's one step back in order to go forward.

3 Now I open the Levels dialog box (⌘-L) and drag the gray midpoint slider to the left and the right, making sure the Preview check box is turned on so I can see how the Quick Mask chokes or spreads as I adjust this slider. Dragging to the right chokes and dragging to the left spreads. I drag about three-quarters of the way across the slider, stopping when the edge spill is gone. Then I exit Quick Mask mode and the selection is complete, sans edge spill.

reload them later as selections.

You can also save a selection as a layer mask (see "Make Layer Masks"). When you choose Add Layer Mask from the Layer menu, you're telling Photoshop to add masking tape to that layer so that specified parts of it are obscured. The mask you create is then attached only to that layer. This way, you needn't delete parts of a layer—layer masks are nondestructive, so if you change your mind, the original layer is still intact.

Selection Tips and Tricks

Even if you know your way around Photoshop's selection tools, there are always new ways to use them more efficiently. Here are a few helpful hints.

Marquee Positioning If you're expanding a rectangular or oval selection marquee and you realize that you didn't position its origin in exactly the right place, don't fret: with the mouse button still held down, press the spacebar. Now you can move the entire selection and reposition its starting point. Release the spacebar and then continue expanding the selection as before.

Selecting Hidden Parts In Photoshop 5 you can select pieces of your image that lie outside the image boundary—hidden by the gray canvas that surrounds the document—by option-dragging with the lasso tool.

Lasso Toggling If you want to draw a straight line while using the lasso tool, hold down the option key, release the mouse button, and draw the line. To draw freely again, press the mouse button and release the option key.

Magic-Wand Trickery People typically use the magic-wand tool to select parts of an image, but sometimes it's easier to *deselect* using the magic wand. Drag a rectangular marquee over a big chunk of your image, hold down the option key, and click on the magic

continues

Extract from a Channel

ONE OF THE MOST POWERFUL BENEFITS OF SELECTIONS AND channels being equal in Photoshop is that you can use the information in a channel to make a superior selection. There are many variants of the following technique, including running a High Pass or Median filter on your alpha channel. Keep an open mind and experiment.

1 Trying to select the wires and steel structures in this complex image using only the standard selection tools would be a nightmare.

2 Instead, I look at each of the image's channels by pressing ⌘-1 for red (at left), ⌘-2 for blue (center), and ⌘-3 for green (right). I find the channel with the best contrast between the background and the objects I'm trying to select. Here, the red channel is the winner.

Red channel

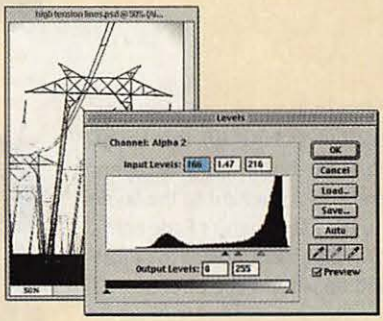

Blue channel

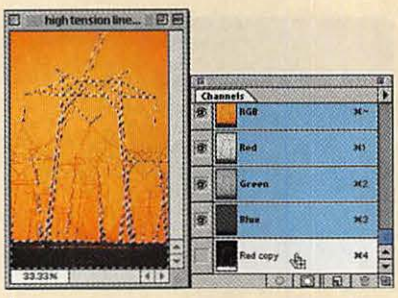

Green channel

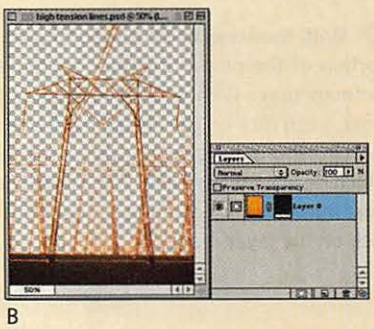

3 I duplicate the red channel by selecting Duplicate Channel from the Channels palette's pop-up menu. Then I manipulate the Levels on the duplicate until the parts I want masked are fully black and the parts I want selected are fully white; I make sure to have a soft gray transition between the two to prevent the result from appearing choppy. (Instead of using Levels, you can use painting tools, filters, Curves, or any other Photoshop feature to achieve the mask.) When finished, I invert the channel (⌘-I) to make the background black.

4 Finally, to load the selection I ⌘-click on this channel in the Channels palette (A). For greatest flexibility I convert the background layer to a regular layer by double-clicking on it, and then choose Add Layer Mask from the Layer menu. This way, the background becomes transparent (B). I can then drag the entire layer over to the composited file for final adjustments.

A

B

wand to deselect parts you don't want.

Color Quick Change It's often helpful to change the Quick Mask's red color to something that stands out better—especially if your image contains red. To do this, double-click on the Quick Mask icon at the bottom of the Tool palette, and alter its color and opacity in the Quick Mask Options dialog box. I generally set the opacity to 70 or 80 percent.

One-Step Loading Here's a shortcut to load a channel as a selection: ⌘-click on the channel in the Channels palette. You can also load a layer's transparency mask (the parts of the layer that are transparent) by ⌘-clicking on the layer in the Layers palette.

Should You Buy a Plug-In?

If after trying the selection tools and techniques described in this article you feel you're spending too much time making a good selection, you might want to consider buying a commercial plug-in that facilitates selections, such as the $300 Mask Pro from Extensis (800/796-9798, www.extensis.com), $100 MagicMask from Chroma Graphics (888/824-7662, www.chromagraphics.com), and $495 KnockOut from Ultimatte (818/993-8007, www.ultimatte.com). Each plug-in has its strengths and weaknesses, so make sure the one you pick will do the job for you. Time is valuable, so a plug-in may pay for itself quickly.

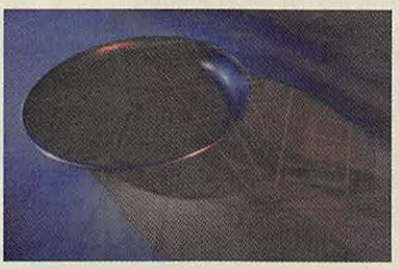

But try to be patient—making a good selection takes time, and the more detailed the area, the longer it'll take. With a little practice you should be able to make expert selections with relative ease, and put Photoshop's powerful digital masking tape to work for you. ■

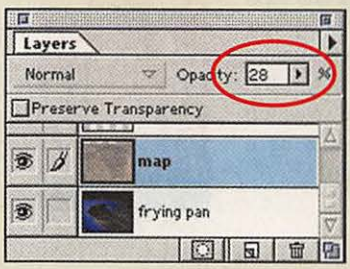

DAVID BLATNER (david@moo.com) is a coauthor of *Real World Photoshop 5* (Peachpit Press, 1998) and a frequent speaker at seminars and conferences.

Make Layer Masks

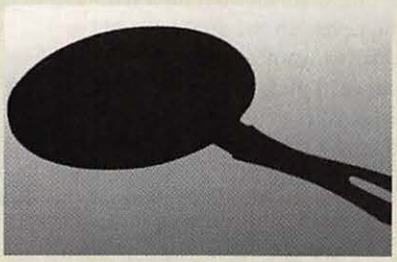

COMPOSITING IMAGES IS MORE ART THAN SCIENCE, AND IT involves many painstaking tweaks to get right. If you don't use layer masks when compositing, you're going to need aspirin by the end of the day, because each tweak destroys more and more of your image. Layer masks give you (and/or your art director) many opportunities to change your (or his or her) mind without degrading image quality.

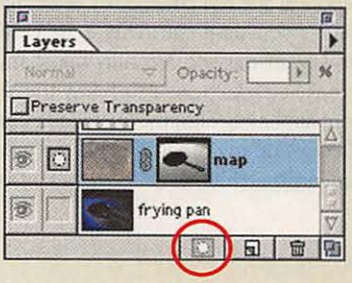

1 Here I've dropped an image of a city map over the background picture and set the opacity to 28 percent. However, the map covers the frying pan. But instead of trying to cut out the frying pan and put it on a layer over the map, it's easier to use a layer mask in the map layer.

2 I select the frying pan and save it as a layer mask by clicking on the Layer Mask button at the bottom of the Layers palette. Then I add a gradient to the layer mask and use the Filter menu's Fade command *after* running the gradient to adjust the mode and opacity of the effect.

3 With the layer mask turned on, that portion of the map is invisible. To move the map image without moving the layer mask, I can click on the link icon between the two thumbnails in the Layers menu, which deactivates the link. To turn off the layer mask without deleting it, I can shift-click on the layer mask.

In June 1999, hundreds of web teams from around the world will pack their bags and travel, any way they can, to Web Design & Development — WEB99.

In '96 we took you beyond static pages. In '97 we showed teams how to work together to build sites, filtering through the profusion of new technologies and techniques. In '98 we highlighted site usability and customer focus.

In '99 it's still about all of this — and much more. Collaborative team building. Leveraging technology and streamlining processes. Keeping the market share you've fought for. Going beyond the buzzwords. And, as always, creating meaningful sites for customers.

Learn from industry veterans and acclaimed educators in more than 100 classes and tutorials. Keynotes, panels and parties provide more ways to learn, commune and further your career. Check out all the details at www.mfweb.com.

If you're dedicated to the medium, you'll see exactly how WEB99 is dedicated to you and your entire team. Get there.

Turn Snapshots into Art

MAKE INSTANT ILLUSTRATIONS WITH FOUND PHOTOS

by Janet Ashford

Ever watch a street-fair artist make a convincing sketch right on the spot? It's a great skill, but surprisingly not all artists have it. As cartoonist Robert Crumb said, "You say you can't draw a straight line? Don't let those artists fool you. They all use rulers." Not only do they use rulers—artists also use photo references to help them draw more accurately.

For computer-based illustrators, tracing over photos is a great way to create realistic drawings quickly. By combining parts of different photos, you can make custom illustrations that aren't limited to the imagery in a single photo. This is the technique I used to create the image of the coffeepot, cup and saucer, and teapot.

For this project I used three found photographs, a Microtek ScanMaker II HR scanner, Adobe Photoshop 5.0, an Apple LaserWriter II printer, a light table, Adobe Illustrator 8.0, Adobe Streamline 3.1, a number 2 pencil, and matte acetate.

I scanned in the photos, increased the contrast, and used Photoshop's Unsharp Mask filter to emphasize the edges of the objects. Then I printed the images, traced them on my light table, and scanned the sketches back into Photoshop. I converted the images to PostScript paths in Adobe Streamline and then used Illustrator to create the composition and add color.

Next I brought the composed image into Photoshop and used filters and layers to add texture and depth to the final illustration. The whole process took little more than two hours, and the time I spent drawing by hand was a welcome break from my daily computer work. **m**

JANET ASHFORD (www.jashford.com) is a freelance designer and coauthor of *Start with a Scan* (Peachpit Press, 1996).

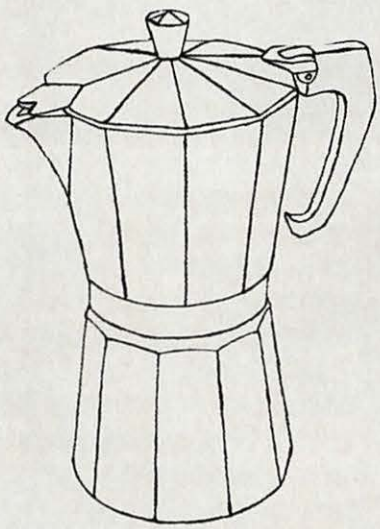

1 First I picked three photos from my collection of snapshots: one of an espresso pot, another of a cup and saucer, and a third of a teapot. I scanned in each photo at 300 percent, converted them to gray scale in Photoshop, increased the contrast, and applied the Unsharp Mask filter to accentuate the forms' edges.

2 Next I printed out the black-and-white photos on my laser printer, slapped each one onto my light table, and covered them with matte-surfaced acetate. I traced over the prints with a number 2 pencil, following the edges of the objects and making sure my pencil marks were dark and solid. I used solid black lines to enclose all areas I planned to fill with color, leaving no line breaks to allow "bleeding." Then I scanned in the pencil drawings and opened them in Photoshop.

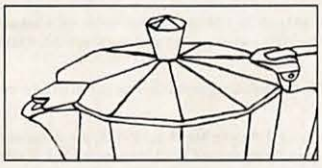

6 The final result is an image with pleasing shapes; a softened, textured effect; and interesting color artifacts.

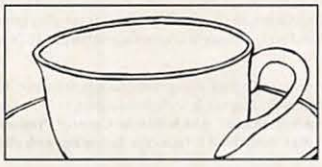

5 To add texture, I opened the finished Illustrator EPS in Photoshop and experimented with various filters. I made a softly textured version by applying the Rough Pastel filter, and a black-and-white version by applying the Charcoal filter. Then I placed each of these versions in separate layers in a single Photoshop file. I put the black-and-white version in the top layer and set it to 50 percent opacity in Overlay mode.

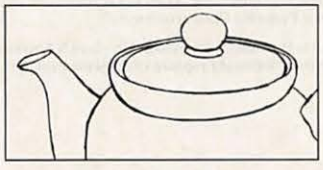

3 At this point I could have combined the three sketches in Photoshop and added bitmapped color and texture. But I decided to develop the images further in Adobe Illustrator, so I used Adobe Streamline to autotrace each scanned drawing and convert it to PostScript paths. I used the Outline method, setting the Tolerance to Tight to pick up as much detail as possible.

4 I opened each PostScript drawing in Illustrator, and sized and positioned them in a single Illustrator file to create a pleasing composition. Next I filled the white shapes inside the black lines with solid colors. Then I imported the gray-scale TIFF version of each object to use as a reference for drawing the table edge and shadows, and filled the shadows with solid colors. This produced a flat, smooth-textured piece of art.

Here in this issue!

Introducing a New Service to Readers...

Macworld Get Info

www.macworld.com/getinfo

Macworld's NEW Online Reader Service

Introducing Get Info. Now you can get information on all the products and services you see in *Macworld*. Only get it faster. Simpler. Better. Now. All you have to do is visit one site:

SUMMARY NOTICE OF SETTLEMENT AND SCHEDULING OF HEARING ON FINAL APPROVAL OF CLASS SETTLEMENT

ATTENTION

TO: ALL PERSONS OR ENTITIES WITHIN THE UNITED STATES WHO PURCHASED NEW, FOR THEIR OWN USE AND NOT FOR RESALE TO OTHERS, CERTAIN APPLE HARDWARE PRODUCT MODELS INTRODUCED IN THE MARKETPLACE BETWEEN APRIL 1, 1993, AND APRIL 1, 1996, AND APPLE PERFORMA PRODUCT MODELS INTRODUCED IN THE MARKETPLACE BETWEEN SEPTEMBER 1, 1992, AND APRIL 1, 1996, WHO WERE AFFECTED BY THE OCTOBER 13, 1997, CHANGE IN APPLE'S TECHNICAL SUPPORT POLICY:

THIS SUMMARY NOTICE IS GIVEN TO INFORM ALL POTENTIAL CLASS MEMBERS OF A PROPOSED SETTLEMENT OF ACTIONS THAT MAY AFFECT THEIR RIGHTS. PLEASE READ THIS SUMMARY NOTICE CAREFULLY AND IN FULL.

IF YOU PURCHASED WITHIN THE UNITED STATES, FOR YOUR OWN USE AND NOT FOR RESALE, A NEW APPLE COMPUTER, INC. ("APPLE"), HARDWARE PRODUCT MODEL INTRODUCED IN THE MARKETPLACE BETWEEN APRIL 1, 1993, AND APRIL 1, 1996, OR A NEW APPLE PERFORMA PRODUCT MODEL INTRODUCED IN THE MARKETPLACE BETWEEN SEPTEMBER 1, 1992, AND APRIL 1, 1996 ("COVERED PRODUCTS"), AND YOU WERE AFFECTED BY THE OCTOBER 13, 1997, CHANGE IN APPLE'S TECHNICAL SUPPORT POLICY, YOU MAY BE A MEMBER OF THE CLASS AND YOUR RIGHTS WILL BE AFFECTED BY THE PROCEEDINGS IN THESE ACTIONS. IF YOU ARE A MEMBER OF THE CLASS DESCRIBED ABOVE AND YOU DO NOT REQUEST EXCLUSION FROM THE CLASS, YOU WILL BE A "SETTLEMENT CLASS MEMBER" IF CERTIFICATION OF THE CLASS IS FINALLY APPROVED.

NOTICE IS HEREBY GIVEN that a hearing will be held before the Honorable Robert Baines of the Superior Court of California for the County of Santa Clara, located at 191 North First Street, San Jose, California, on August 20, 1999, at 10 o'clock a.m. to determine: (1) whether the proposed settlement of Actions on terms set forth in a Settlement Agreement and Release dated March 25, 1999, is fair, reasonable and adequate; (2) whether a settlement class should be certified; (3) whether the Court should enter the proposed final judgement; and (4) whether the application of counsel for the class for an award of attorney's fees and expenses in an amount up to $875,000 should be granted.

DESCRIPTION OF THE ACTIONS: Class Representatives in the Actions allege that Apple wrongfully denied purchasers of the Covered Products live telephone technical support at no charge that it had previously promised them. Apple has denied these allegations and alleged numerous affirmative defenses.

DESCRIPTION OF THE SETTLEMENT: Under the terms of the proposed settlement, Apple will provide the following benefits to Settlement Class Members: (1) Effective March 1, 1999, Apple will resume providing live telephone technical support at no charge to all original purchasers of the Covered Products for the life of their Covered Products. (2) Apple will refund to Settlement Class Members any and all sums paid to Apple for diagnostic technical support for Covered Products (this refund will be automatic; Settlement Class Members do not need to take any action to receive the refund). (3) Apple will reimburse Settlement Class Members for payments made to a company other than Apple for diagnostic technical support for Covered Products during the time period October 13, 1997, to March 1, 1999 (requires submission of a Claim Form as explained below). (4) Apple will provide a maximum of 480,500 $50 coupons redeemable at The Apple Store On-Line for Apple-branded hardware and Apple-branded software products (excluding printer consumables) priced at $99 or more (pre-tax) to Settlement Class Members who were refused live technical support at no charge (requires submission of a Claim Form). (5) Apple also has agreed to pay all costs of mailed and published notice, as well as to pay an amount not to exceed $875,000 in full payment of the fees and expenses of Class Counsel.

HOW TO RECEIVE SETTLEMENT BENEFITS: If you are a Settlement Class Member, provision of live technical support at no charge and refund of payments to Apple for diagnostic technical support for Covered Products is automatic. You need not send in a Claim Form to receive these benefits. However, to receive reimbursement of payments you made to third parties for diagnostic technical support, or to receive a $50 coupon, **you must submit a Claim Form on or before September 8, 1999. To receive a Claim Form and copies of the detailed "Notice of Proposed Class Settlement," which lists the Covered Products and describes the Actions, the proposed settlement, and the rights and options available to Class Members, you may call 1-800-752-0946 or you may download it from the following web site: http://www.apple.com/legal/techsupportsettlement.html.**

REQUESTS FOR EXCLUSION AND OBJECTIONS: Any requests for exclusion from the proposed settlement must be sent by certified mail to Martin W. Anderson of Anderson & Anderson, 2070 North Tustin Avenue, Santa Ana, California 92705, postmarked on or before July 2, 1999. Rights regarding exclusion are fully explained in the "Notice of Proposed Class Settlement."

Any objections to the proposed settlement must be filed with the Court and copies sent by certified mail to Martin W. Anderson at the above address and to Penelope A. Preovolos, Morrison & Foerster, 425 Market Street, San Francisco, California 94104, postmarked on or before July 2, 1999. The procedure for making an objection is fully explained in the "Notice of Proposed Class Settlement." DO NOT CONTACT THE COURT OR THE CLERK'S OFFICE FOR INFORMATION.

Dated: March 26, 1999

By: Order of the Santa Clara Superior Court
Robert A. Baines
JUDGE OF THE SUPERIOR COURT

The most powerful, expandable, *revolutionary* Mac ever built!

You could say it's like getting twice the computer at half the price—but it's more than that! The new Power Mac G3 isn't just a re-design. It's a revolution. With greater processing power. Cutting-edge connections. Easy access inside and out. Remarkable affordability. And a fresh, new look inspired by the iMac. Put simply, it's faster, smarter, and easier to own than anything out there!

A new standard in speed and design!

Outrageous performance.

- PowerPC G3 processor running at 300, 350 or 400MHz
- Supports up to 1GB of low cost, high performance PC100 SDRAM
- Up to 1MB of performance-boosting backside cache running at up to 200MHz
- System bus running at 100MHz (instead of the 66MHz bus on earlier models) boosts performance speeds, reduces bottlenecks
- 6 or 12GB Ultra ATA hard disks or a 9GB Ultra2 LVD SCSI hard disk
- Support for hard disk storage up to a staggering 100GB
- Built-in 10/100BASE-T Ethernet networking; optional Gigabit Ethernet

Advanced capabilities.

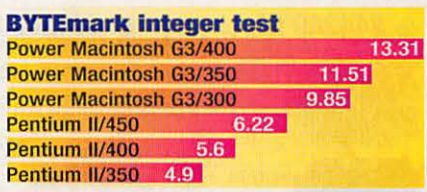

- Two high speed FireWire ports for digital video and still cameras, printers, scanners and other multimedia peripherals
- Two USB ports for keyboards, mice, printers—up to 127 devices at once
- Four PCI slots running on a 100MHz system bus—50% faster than in previous Power Macintosh G3 computers (three 64-bit slots and one 32-bit for ATI card)
- Two additional bays let you store over 100GB internally

Design elegance.

- Translucent case, inspired by the iMac
- Easy, drop down accessibility for installing cards, drives, and memory
- Convenient, built-in handles for easy carrying

Great graphics and video features.

- ATI RAGE 128 Graphics Accelerator provides incredible 2D/3D performance for graphics intensive games
- 16MB SDRAM video memory
- Built-in FireWire—allows you to transfer video directly from your digital video camera for digital editing with virtually no loss of quality

**Buy any qualifying Power Mac G3 and receive a FREE Internal Iomega Zip Drive or FREE Apple 56K Internal Modem. Zip drive or modem will be sent to you directly from Apple. Allow 6-8 weeks for delivery. Good for purchases between 4/2/99 and 6/27/99. Visit warehouse.com/rebate/apple for coupon, or call us at 1-800-390-0705 to ask for one. Offer not valid on purchase of reconditioned models. Limited time offer. Call for details.

- Our sales staff is ready to take your order 24 hours a day, 7 days a week. We accept the following major credit cards: Visa, MasterCard, Discover Card/NOVUS, AmEx. Your credit card will not be charged until each item is shipped (no surcharge). CT, NJ and OH residents add applicable sales tax.
- Overnight delivery just $9.95 per order up to 5 pounds. For all orders over 5 pounds, shipping is $9.95 plus an additional $1.75 per pound or fraction thereof. (Example: shipping for a 6 pound order is $11.70). Please add an additional $3.00 for all orders $50.00 and under.
- Orders for "in-stock" items placed on weekdays up until 12:00 midnight (E), 10:00 pm (E) for Internet orders, ship same day for overnight delivery (barring system failure, etc.). We anticipate being able to ship "out-of-stock" items within 30 days.
- All items we sell come with the MacWAREHOUSE 30-Day Guarantee Against Defects. Call our Customer Service Department at 1-800-925-6227 for a Return Merchandise Authorization (RMA) number within 30 days of the original invoice date. Defective software will be replaced immediately upon receipt of the defective product. Defective hardware will be replaced or repaired at our discretion, except for products from Apple 1-800-SOS-APPL (1-800-767-2775), or Tektronix (1-800-835-6100). These manufacturers must be contacted directly, and will repair or replace products at their sole discretion. Should you return hardware to MacWAREHOUSE from Apple or Tektronix, you will be assessed a 15% restocking fee which will be charged to your account. All returns are subject to the following: 1. All products must be returned in original packaging. 2. Shipping and handling charges are not refundable. 3. Software and consumables are not refundable unless returned unopened in original packaging with documentation. 4. Custom orders and cables are not refundable. 5. Products designated as "all sales final" are not refundable.

For content creators

APS Q 2000 Ultra SCSI

- Exceptional 2GB value for home computing
- Trusty Fireball Stratus mechanism
- Discontinued - available while supplies last

Based on the 5400 rpm Fireball Stratus, this economical drive gives you 2GB of basic storage.

$199.95
EL Configuration

APS ST 4000 Ultra SCSI

- Budget-conscious 7200 rpm Medalist Pro mechanism for desktop/workstation
- 4340MB of formatted capacity

If you need to upgrade a lot of workstations' storage without breaking the bank, take a look at the ST 4000. This inexpensive drive gives you adequate performance for most business applications, as well as good reliability.

$229.95
EL Configuration

APS ST 9000 Ultra SCSI

- 7200 rpm Medalist Pro with over 9GB capacity
- Low seek times (5.0ms) and high transfer rates for maximum productivity
- Great for graphics/imaging workstations

The ST 9000 gives you the best of all worlds. You get outstanding performance, terrific reliability and a great price. Upgrade your high-performance workstations with the APS ST 9000 today.

$399.95
EL Configuration

LaCie EKO 10GB USB

- Among the first hard drives with USB
- Easiest way to add over ten gigabytes of storage

Adding more capacity to your desktop, workstation or server is a snap with this USB hard drive. Just hook it up and you are ready to go.

$299.95
EKO Enclosure

APS I 4500 Ultra SCSI

- 7200 rpm Ultrastar mechanism with 4.5GB
- Trusty workstation workhorse

The I 4500 gives you ample performance and top reliability. What else would you expect from the creators of the hard drive? Call now.

$259.95
EL Configuration

APS I 9100 LVD SCSI

- 10,000 rpm 9.1GB drive from the developers of the hard drive
- Maximum performance for graphics and video editing workstations and demanding servers

For the absolute maximum hard drive performance on an LVD SCSI-based system, ramp up with the APS I 9100 LVD. Based on the new Ultrastar 9LZX mechanism, this drive offers seek times as low as 6.3ms and very high sustained internal data transfer rates (up to 17MB/s). Upgrade your high-performance workstations and servers to the power of one of the fastest mechanisms and LVD SCSI speed with the APS I 9100 LVD.

$549.95
Internal Configuration

who want more than just a drive.

"Mechanisms themselves are from the same manufacturers that everybody else buys from. I still buy all my drives from APS, as I like APS' cases, big fans, power supplies, active termination and the standard full-pitch SCSI connectors. (APS) also tracks all serial numbers and purchase dates of their products, so I don't have to keep all the paperwork to prove the warranty... I highly recommend Melissa <melissa@apstech.com> at APS for your sales needs."

Martin Mitchell
Consultant/Systems Engineer
Nomad

BRAND NEW!

APS ST 18100 LVD SCSI

- 10,000 rpm Cheetah with 18GB and LVD SCSI
- Blazingly fast hard drive for high-end servers, including digital video
- 20.1MB/s sustained internal transfers

If your servers serve up digital video or huge graphics files, the APS ST 18100 LVD is the fastest drive available. Period. And only an APS Pro enclosure can guarantee that this hot drive doesn't overheat, so don't settle for anything less.

$999.95
Internal Configuration

APS I 36000 LVD SCSI

- Biggest hard drive available (36GB) sports LVD SCSI for super throughput
- Our second-fastest drive, perfect for digital video, enterprise servers
- Protected from overheating in APS Pro enclosure with IC²E and all-around venting

Isn't it amazing? Just a few months ago, you had to put up with a bulky, awkward 5.25" half-height drive to get this kind of capacity. And that was only 23GB. The I 36000 LVD packs over 36GB into a standard, 3.5" form factor. Big things really do come in small packages.

$1,499.95
Internal Configuration

APS ST 50000 LVD SCSI

- Brand-new Atlas IV mechanism gives you the highest performance and top reliability
- 7200 rpm and over 49GB for graphics, 3D, digital video and enterprise servers

This 7200 rpm mechanism provide corporate-size storage and high-performance for servers. With internal data transfer rates of up to 17MB/s and an LVD SCSI interface, the Barracudas race through data-intensive projects like multimedia and imaging. Low seek times make these drives suitable for OLTP servers, too.

APS DupliCD 121 Duplicator

- Stand-alone units give you one-button disc duplication – easy for even non-tech staff
- Faster reader and 4x8 CD-R dupes full CDs in just 18 minutes for better production

The new APS DupliCD 121 is simple enough for even your non-technical staff to use. Just load the discs and push the button. But these units are also fast and versatile enough for professional applications. A fast 36X reader and 4X/8X CD-R drive crank out your custom CDs in just 18 minutes. And the stand-alone DupliCD 121 can also be connected to your computer via the Fast SCSI-2 interface. So you can use it as two CD devices when you are not duplicating for even better value. Plus, you get full-featured recording software for both Mac and Windows. If you want to spend less time and effort duping discs, invest in an APS DupliCD 121 today.

Dupe discs for only $999.95
External Configuration

APS CD 40

- New 40X CD-ROM whips through challenging multimedia titles, training discs
- Multiread capabilities recognize virtually any disc, including CD-R and even CD-RW
- Includes performance-enhancing software

Now, you can get 40X CD speed at a 36X price. The APS CD 40 gives you the fastest speeds around. But it costs about the same as our previous generation, the CD 36. This new CD speedster handles your most demanding CD-ROM titles with ease. It also reads your custom CD-R and CD-RW discs, so it's perfect for using training discs at the desktop. Shift into high gear with the APS CD 40 today.

Super-speedy CD just $149.95

APS NS-8

- Protects up to 4GB of critical data (native)
- "...the best back-up solution available for the home and small offices." – Brad Miser, **Using Mac OS 8.5**

The APS NS-8 (the drive formerly known as the APS HyperQIC) is now better than ever. This Travan NS-8/QIC drive now has hardware ALDC compression for faster backups and more efficient data storage. You can safeguard up to 8GB of valuable business or personal files on one tape with the new compression. The APS NS-8 is recommended as the best backup solution for home and small offices in **Using Mac OS 8.5** by Brad Miser. The NS-8 is just as good for Windows users, too.

APS HyperDAT® III

- 12GB native backup for high-end workstations, entry-level networks
- Reliable DDS-3 technology

The APS HyperDAT III provides a cost-effective solution to the backup needs of data-intensive systems. Transfer rates of up to 60MB/s for fast backups

Protect your data for only $979.95
Internal Configuration

APS HyperDAT® IV

- Longer tape, higher density vault DDS-4 into network backup capability
- 20GB native capacity, 2-3MB/s transfers

If you trust your desktop and workstation backup to DDS, but it doesn't meet your server or workgroup needs, take a second look. New DDS-4 technology has increased capacity by 67% over DDS-3 and shrunk your backup time in half. But the HyperDAT IV can read and write to your DDS-3 and even DDS-2 tapes, so migration is painless. Why not add the HyperDAT IV for your big jobs?

C104 1761	CLUBMAC CD DUPE 2 CD DUPLICATOR	$89

Don't Forget to Backup Your Data!

The new ClubMac Lightning DAT brings backup to a whole new level! The Lightning DAT includes one 125M Data Media Cartridge for a complete backup solution, providing ease of operation for the Network Administrator. With a 24GB data storage capacity it is easier to handle larger LAN systems. DDS-3 drives are typically 60% faster than other DDS-2 drives based on published specifications. The Lightning DAT is also backward compatible with DDS-2 media, so you can still read all of your existing 120M, 90M, and 60M tapes. With all of these features and ClubMac's great low price, you can't go wrong!

The Difference? It's Speed-Tuning!
Working closely with drive manufacturers to identify and optimize key internal mode settings for the Mac, NT, & PowerRAID our hard drives are calibrated to operate at peak efficiency. We call it Speed-Tuning™ and it works. All our awards prove it.

The other guys give you a hard drive in a box.
The Speed-Tuning Experts at ProDirect give you...
- A HARD DRIVE IN A BOX THAT HAS BEEN SPEED-TUNED TO THE EXACT WAY YOU WORK
- YOUR CHOICE OF SPEED-TUNING: AV RECORDING, DESKTOP PUBLISHING OR MULTI-PURPOSE CALIBRATION
- AWARD-WINNING PERFORMANCE
- TECH SUPPORT FROM PROS WHO KNOW MORE THAN JUST HOW TO PACK BOXES

Buying a New System? Remember, Apple Hard Drives & SCSI Accelerators Only Carry a One Year Warranty! All ProDirect drives have a Five Year Mfg. Warranty!

POWERSTOR EXTERNALS

All ProDirect External Hard Drives are Enclosed in our Attractive, High Performance PowerStor Cabinet.
• All Drives Pre-Tested • QUIET High Power Cooling Fan • Active Terminator • System Compliments, Stackable Design • Reliable 110-220 Auto sensing 40 Watt UL, TUV, CV, Approved Power Supply • System or Daisy Chain Cable

CADMOVER® v.5.1
What good is a built in translator if it doesn't work?
You've worked hard and now it's time to use those files in another program. You try to import them & all you get is garbage. Not with CADMOVER - For over ten years we've been helping people beat their deadlines, no re-drawing, no touch-ups.
File formats: DWG, DXF, EPSF, PICT, CGM, IGES, HPGL, STL, MiniCAD, DDES2, etc... Internal Features: scaling, 2D/3D views, font mapping and more. With 16 decimal place accuracy redrawing is a thing of the past.

MAC - - - - - - - - - WINDOWS

THE SHORTEST DISTANCE BETWEEN TWO PLATFORMS IS PC MACLAN

PC MACLAN and PC Migrator shorten the distance between Windows and Macs. Together PC MACLAN and PC Migrator eliminate cross-platform hassles and file transfer and renaming headaches that cost you time and money.

PC MACLAN for Windows 95/98 allows you to share printers, files, and drives with Macs, and PC Migrator makes moving files from Mac to PC an ocean breeze - renaming and adding the proper file extensions on the way.

PC MACLAN & PC Migrator - bridging the gap between Windows and Macs.

Custom ULTRA-2 LVD SCSI Cables - Terminators - Cases

If you want Ultra SCSI Performance use our Teflon Cables & Active Terminators. *Our knowledgeable SCSI Technicians will solve all your SCSI problems...guaranteed!*

SCSIVue™ Active Terminator

LVD, 68MD, 50MD, 50C, Optional Remote Display
From: $59
Four models available with optional Remote LED Pak. These are the finest terminators available, they fix SCSI problems and improve reliability.
Benefits : • Improves SCSI Bus Performance • Less Errors; More Reliable Data Transfer • Diagnoses Problems • Analyzes Signal Quality
Features : • Active Regulation • *Fast 50 & Fast Wide 68* • Status Indicators • Gold Contacts

Active 2-1 SCSI Switch / Repeater

Benefits : • Up to 14 Devices to 1 Computer • Share Devices Between 2 Computers
Features : • 2-1 Active Digital Switch/Repeater • Regenerates SCSI Signal for Long Runs
$599

Gold Diagnostic Adapters

• Both 50 pin and 68 pin (all combinations) Gender Changer
Drive Bus Changer (run 68 pin on 50 pin bus)
Styles : 68 pin Drive to 50 Bus • 68 Pin Drive to 50 Pin IDC (runs wide drive as narrow)
From: $49
Styles : 68 Pin Adapter Wide to 50 Pin Narrow • 68 Pin External Adapter to 50 Pin (converts Host Adapter)
68 Pin to 50 Pin Centronics or 50 Pin Micro D Adapters
Styles : For Adaptec Ultra Wide Cards • Adapters with partial termination built in for 68 to 50 converters (converts Host Adapter)

SCSIVue™ Gold Diagnostic Cables

Benefits • No Loss Of Important Data • Faster Performance • Test Cable Integrity
Features : • Diagnostic Indicators • Large Ferrite Filters • Triple Shielding (Unique Design) • Double Gold 20u" Plated Connectors • Extra Heavy 26 Gauge Wire • 100 Styles in Stock
From: $39

Teflon® 90 Ohm External Cables

Benefits : • Ultra SCSI 40 MB/s operation • Fixes Ultra SCSI Cable Problems
Features : • Perfect 90 Ohm Impedance Match • Triple Pronged Connector With Gold contacts
From: $159

Hot Swap Powered Terminator

$69
Now you can safely remove any SCSI device from a SCSI chain by simply clicking a switch. The Hot Swap Powered Terminator also has an optional Power Supply so that it can supply termination power to portable setups or when termination power is not being supplied.

External Ultra SCSI Cases

• Ultra SCSI Custom Teflon Cable Available • Custom Enclosures in 1 Day for Raid & Arrays
From: $99
NEW! Temperature ALARM! Automatic Monitor & Control

14 & 29 Bay Ultra SCSI Towers

OPTIONS: • Ultra LVD Cable Kit • Dual Redundant PS • Bay Coolers w / Brk • Temp Alarm System
From: $999
Bay Cooler Kit keeps those HOT Ultra SCSI Drives COLD as ICE!
Dual Fan & Bracket $29
HOT SWAP Pull Out Bays Compatible with all 50 pin & 68 pin SCSI Buses up to Fast SCSI 2. From: $79

(LVD)-TPO Teflon® Internal Cables

Teflon® is a registered trademark of DuPont
Benefits : • Less Errors, Ultimate Performance • Silver Wire Improves Signal Quality
From: $39
Features : • Perfect 90 or 132 Ohm Impedance • Custom in 1 Drive • Triple Pronged Connector - Gold contacts Silver Wire

50 Pin Replacement Cable for External Drive Cases. 68 Pin Replacement Cable for External Drive Cases. TEFLON TPO

Active Digital SCSI Repeater

From: $99
PS Included
Benefits : • Models for all SCSI types • Fixes SCSI Cable Problems • Doubles Cable Length (up to 18')
Features : • Active Termination and Signal Purification • Ultra Fast Performance for Added Capabilities • Diagnostic Capabilities • 30u" Gold Contacts

SCSI Cable Tester - LED Readout

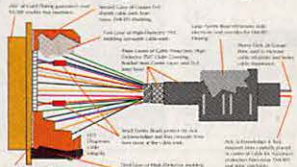

This Digital SCSI Cable Tester can test all the popular cable styles for opens, shorts, and unreliable operation. Battery powered for easy use anywhere you need it.
Three models to choose from:
• 50 pin IDC
• 50 pin Centronics
• 68 pin MicroD

From: $39

Granite Cables Are The Best Because They're Engineered Right.

Granite Cables were designed by SCSI Engineers to be the **Best Cables On The Market.** Everything about them means better performance and higher reliability. Our design incorporates an exclusive shield that protects the Acknowledge and Request lines from noise. Large Ferrite beads are installed on all cables to protect them from static and noise. Every cable incorporates a LED indicator that lets you know it is operating properly. We also use more GOLD on every cable. Add to this our impedance matching techniques and you have most of what makes us THE BEST!

FREE Technical Support!!!
Available to everyone, customer or not.

CALL THE MAC EXPERTS!

Your one-stop source for everything Macintosh®. Friendly help and expert advice is our specialty! Call for the absolute lowest prices and immediate delivery on over 30,000 Mac® products!

The PowerMax Difference:

- Our salespeople are some of the most knowledgeable in the business. They're not order takers and they don't push for a one time sale. Well over half our business comes from repeat and referred customers!
- We have 800 line technical support with no voice mail. Always a live human being!
- We answer the phone: "how can we help you?" not "may I take your order?"
- We live in Oregon, where there is no sales tax and the people are friendly and polite!
- Government and corporate purchase orders normally approved the same day.
- *We have competitive prices on over 30,000 Macintosh® items.*
- All we do is Macintosh®– our company is run entirely on Macs®.
- We offer you choices: buy over the phone, over the internet, or in person, all with the same great prices and super service!*
- We *listen.*

The other guys

- They sell you a box.
- If you have a problem, they tell you to call the manufacturer. And then you get to wait on hold for a long, long time.

GUARANTEED BEST DEALS ON MAC SOFTWARE!

"As a leading developer of PC-to-Mac connectivity software, Miramar Systems relies on reaching a captive readership of Mac OS-based buyers and decision makers. Macworld Magazine's Shopper section has consistently out-performed other Mac publications that we've advertised in with higher recall and quality leads. A lot of magazines talk about their 'value add', but Macworld Magazine truly delivers."

Renee Cooper,
Director of Marketing,
Miramar Systems, Inc.

Free Tech Support

Mac Addict Rated — Freakin' Awesome!

Rating ★★★★ Mac Reviews

Macworld Editors' Choice

MacNow Editor's Choice Award

MacHome

MacDirectory Best Buy Awesome!

Sonnet™ Technologies manufactures the finest Macintosh processor upgrade cards for a wide range of computers including '020, '030, '040, NuBus, PCI, and G3 Power Macs.

- Match or beat the CPU performance of a new G3 system.
- 100% software compatible.
- Plug-and-play installation.
- No switches or control panels to set.
- Backed by a three-year warranty.

We now have video card support for the 6100AV. If you have a 7100 or 8100 with a video card in the PDS slot just install one of our 7100 or 8100 Adapter Kits. Or install a Sonata Pro 24 for comparable or superior performance to the Apple PDS AV and High Performance Video Cards.

Other PCI Power Macs (Upgrade-challenged) can now be upgraded through the Level 2 (L2) cache slot.

Got a Quadra or Centris? You can now run Mac OS 8.5 and realize all the performance of PowerPC native applications.

The Desktop Critic

by David Pogue

Lies, Damn Lies, and Statistics

YOU CAN FIND NUMBERS THAT SAY ANYTHING—ESPECIALLY IF YOU MAKE 'EM UP

MEGABYTES, megahertz, market share—you can't have a conversation about computers without trotting out numbers. Yet the sloppiness of today's high-tech numberology is appalling. Let's try this example: how many Americans are online? Research firm IDC nails it squarely at 38 million; Mediaquest says 53 million; Intelliquest says 73 million people are online, almost double IDC's estimate.

Now let's say you're writing a *Wall Street Journal* article about how TV is doomed because of the Internet's rise. Which number would *you* pick?

See the problem? We worship statistics, measurements, and specs, but the numbers are often figments of somebody's agenda. Here are a few we could start correcting right now:

56K Modems How is that label misleading? First, *56K* should be *56k*, referring to kilo*bits* per second, only an eighth as much as kilo*bytes*, the K that we're all used to. Second, the FCC sets a 53-Kbps maximum speed, because stronger signals cause phone-line interference. Third, even 53 Kbps is theoretical; most people get 46 Kbps on a good day. And fourth, that speed is only for receiving data. All 56-Kbps modems *send* data at only 33 Kbps. In other words, *56K* is the most fraudulent spec in the industry. Ralph Nader, where are you?

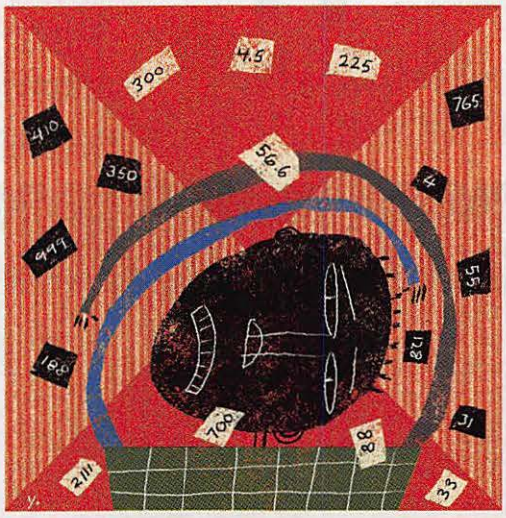

List Prices What a wacky system: each company picks a pie-in-the-sky price for each product. That way, every catalog and store can sell it for half as much, promising us a fantastic discount.

Trouble is, *nobody* sells software for list. Digital Origin's EditDV goes for $899—list. But even the company's own Web site sells it at $499. Why don't we end the charade and talk about the actual prices? (*Macworld* will soon do its part by publishing averaged prices from several national stores rather than list prices.)

Suggested Memory Size When I was having trouble with Internet Explorer, a Microsoft tech rep's first suggestion was to change the suggested RAM allotment from 4 megs to 8.

In other words, software companies pressure their programmers to set memory sizes too low—for marketing purposes. We pay the price in stability.

Market Share Macs last a lot longer than Windows PCs. Millions of people still use their nine-year-old Mac Classics

and IIsi's—but how many people still use that era's 386 (Windows 2.0) machines?

So, true enough, current Mac sales aren't a big slice of the pie—but the number we hear about, *sales* market share, is irrelevant (especially when the calculations are as goofy as research firm PC Data's: it tallies each color of iMac as a different model, making it impossible for the iMac to maintain its best-seller status). What really counts—when calculating the potential market for software and add-ons, for example—is how many Macs are in *use*. That number is much higher: 16 percent, by the estimate of the Software Publishers Association (SPA). But do we ever hear that statistic? Noooo!

Software Market Share "Windows applications accounted for 81 percent of the application software sold," says the most recent SPA report; "Macintosh sales represented just 11 percent." Scary, dude.

But the SPA's estimates are nearly useless, thanks to one little fluke: an increasing number of companies include Mac and Windows versions on the same CD. (According to the market-research service SofTrends' latest numbers, up to a third of software best-sellers are such hybrid CDs.) When you buy a hybrid CD, does the CompUSA checkout clerk ask which kind of computer you have? Of course not. All such sales are tallied as Windows sales.

Megahertz As far as the public knows, more megahertz is better. But this year's hot new blue 300MHz Power Mac G3 is actually slower than last year's *beige* 300MHz Power Mac G3 (because of the effect of other components)—and that machine is faster than a 300MHz Pentium (because MHz aren't comparable among different chip families). The world has yet to invent a consistent, overall speed measurement for computers.

Version Numbers Software version numbers are pure marketing concoctions. The upgrade from System 7 to System 7.5, for example, was a baby step compared with the leap from 7.5 to 8.0. If anything, it's the tiny increases that really count, because that's when a program goes from "4.0" buggy to "4.0.1" usable.

Of course, then there's the numbering leap from Word 6 to Word 98. *That* one seems about right. **m**

DAVID POGUE (www.davidpogue.com) cowrote *Macworld Mac Secrets*, fifth—or maybe sixth—edition (IDG Books Worldwide, 1998), which has sold somewhere between 50 and 50,000,000 copies.

JAMES YANG

Sometimes Newer Is Better Than New.

Now the fastest Apple G3 is available in breakthrough beige.

You don't need transparent blue plastic to have a faster Mac. A MAXpowr™ G3 upgrade card from Newer Technology can make your system as blisteringly fast as a brand new Mac for just a fraction of the cost. Just plug one in, and you get quicker start-up times, greater productivity, smoother game play, and all the speedy processing power of the latest G3 machines. Newer created the first Macintosh upgrade fourteen years ago and never looked back. We've even got cards for most Mac clones. Check our web site for a complete list. And while you're there, look into our two-year product warranty. You'll see why we dominate the G3 upgrade market. Order one for your beige beauty today and get blistering speed without the blinding price.
